

Certificate of Blue SkySM
renewable energy support 2008

ROCKY MOUNTAIN POWER THANKS

for supporting Blue Sky renewable energy in 2008.

In 2008, your support of _____ kilowatt-hours of renewable energy avoided the release of _____ pounds of carbon dioxide — this is equal to not driving a car _____ miles.

When customers enroll in Blue Sky, Rocky Mountain Power purchases certified renewable energy credits from regional renewable energy facilities. The environmental benefits figures in this certificate are based on the average non-base load generation emissions from the Western Energy Coordinating Council (WECC) region, as updated September 2008, and on data and calculations provided by the U.S. Environmental Protection Agency.
