

Rocky Mountain Power Docket No. 06-035-148
Status Report of Dealings with Mr. Tim Vetere (and/or Green River Ranches, LLC)
for the period February 26, 2009 through April 28, 2009

March 16, 2009: A letter was sent to Tim Vetere and Nancy Stark providing a ballpark estimate for electrical service for 600 horsepower at 4629 North Hastings Lane, 600 horsepower at 5051 North Hastings Lane, and 30 horsepower at 6550 North Hastings Lane. The letter also stated that until the new 138 KV substation was completed and in service the summer of 2010 these additional electrical loads could not be accommodated.

March 19, 2009: A letter was sent to Tim Vetere and Nancy Stark reminding them that Rocky Mountain Power needed to review and approve the plans for service connections at the one new 300 horsepower primary delivery service and the one new 750 horsepower primary delivery service. As of that date neither Tim Vetere nor his representative had contacted Rocky Mountain Power to discuss the service connections to these primary metered facilities.

April 7, 2009: Received a call from Rader Gilleland, agricultural consultant for Tim Vetere, questioning the ballpark estimates that had been provided to Tim Vetere in the letter dated March 16, 2009; the possibility for service to the 30 horsepower pump at 6550 North Hastings Lane this year; the quality of service in the area; and the timing of building a new substation in the area. The queue process was explained to Mr Gilleland, he was told there were other requests in the queue before Mr. Vetere's 30 horsepower request and Rocky Mountain Power had denied those requests until the completion of the new substation. Mr Gilleland was given the same information Rocky Mountain Power provided all their customers in Green River regarding the in service date of the new substation scheduled for summer of 2010. Additionally, agreed to provide Mr. Gilleland a copy of the January 16, 2009 report provided to the Utah Public Service Commission in the Vetere docket

April 8, 2009: Jesse Barker, Tom Stengel and Debra Dull from Rocky Mountain Power met with Tim Vetere's electrician Kevin Havey, KAP Electric Inc, to discuss the service connections to the 300 and 750 horsepower primary delivery services.

April 13, 2009: Nancy Stark called asking if Rocky Mountain Power could provide her with more information about the in service date of the substation, she was told the summer of 2010. Rocky Mountain Power will provide Ms. Stark with any updated information that is shared with the Green River community. Ms. Stark was not aware that Rader Gilleland had called to discuss the farm's electrical needs and to request service to the 30 horsepower pump at 6550 North Hastings Lane.

April 27, 2009: An email, with an attachment of the report that was filed with the Utah Public Service Commission on January 16, 2009, was sent to Mr Gilleland and copied to Nancy Stark. The email also included a reply concerning the ballpark estimates that were in the January 16, 2009 letter sent to Tim Vetere; the reply explained without a more

detailed engineering study the ballpark figures provided are within plus or minus 20 percent of the actual costs.

April 28, 2009: Kevin Havey, the electrician hired to connect the two new primary delivery services, called Rocky Mountain Power to ask what starting current was allowed for each location. Tim Vetere provided Mr. Havey with the starting current limit defined in the General Service Contracts, but Mr. Havey wanted to discuss the need for soft starts on the various motors. Mr. Havey indicated he will be calling a Rocky Mountain Power engineer to verify his calculations before he continues connecting the various pumps to the primary delivery points.
