UIEC 21st Set Data Request 21.2

UIEC Data Request 21.2

Cost of Capital:

Please describe which of the plant additions described in the previous data requests were built to serve as “peakers.”

Response to UIEC Data Request 21.2

With the exception of Currant Creek phase I, none of the resources referenced in the Company’s response to UIEC Data Request 21.1 were built to serve as “peakers.” With the completion of phase 2 for the Currant Creek project, the plant became a cycling duty resource rather than a peaking unit.
