- 1 December 14, 2009 9:04 a.m.
- 2 PROCEEDINGS
- 3 CHAIRMAN BOYER: Let's go on the record in Docket
- 4 No. 09-035-23. I just mentioned off the record that
- 5 Ms. McDowell is here with Mr. Hickey representing Rocky Mountain
- 6 Power, and as I understand it, we have a person on the phone
- 7 listening in. Would you please identify yourself.
- 8 MS. SCHORN: Yes. Debbie Schorn.
- 9 CHAIRMAN BOYER: And you are representing, Miss
- 10 Schorn?
- 11 MS. SCHORN: RFI Consulting.
- 12 CHAIRMAN BOYER: Very well. Welcome to our hearing
- 13 this morning.
- MS. SCHORN: Thank you.
- 15 CHAIRMAN BOYER: Keeping with that, let's start with
- 16 Mr. Duvall, who's already here. Have you been sworn?
- 17 THE WITNESS: I have not.
- 18 GREGORY N. DUVALL,
- 19 being first duly sworn, was examined and testified as follows:
- 20 CHAIRMAN BOYER: Thank you. Please be seated. Will
- 21 this be Ms. McDowell or Mr. Hickey this morning?
- MR. HICKEY: Ms. McDowell.
- 23 CHAIRMAN BOYER: Okay. Ms. McDowell?
- MS. McDOWELL: Thank you, Chairman.
- 25 //

- 1 DIRECT EXAMINATION
- 2 BY MS. McDOWELL:
- 3 Q. Good morning, Mr. Duvall.
- 4 A. Good morning.
- 5 Q. Could you state your full name and spell it for the
- 6 record, please.
- 7 A. Yes. My name is Gregory N. Duvall, G-r-e-g-o-r-y,
- 8 and Duvall is D-u-v-a-l-l.
- 9 Q. Mr. Duvall, how are you employed?
- 10 A. I work for PacifiCorp.
- 11 Q. What is your title with PacifiCorp?
- 12 A. I'm the director of long-range planning and net
- 13 power costs.
- 14 Q. In that capacity have you prepared and filed in this
- 15 case direct rebuttal and supplemental rebuttal testimony and
- 16 exhibits?
- 17 A. I have.
- 18 Q. And do you have before you Rocky Mountain Power's
- 19 testimony and exhibit list for its net power cost?
- 20 A. I do.
- 21 Q. Does that contain a complete description of your
- 22 direct rebuttal and supplemental rebuttal testimony and
- 23 exhibits?
- A. Yes, it does.
- 25 Q. Do you have any corrections or revisions to your

- 1 prefiled testimony?
- A. Yes, I do. In my direct testimony, on page 16, line
- 3 341, the number \$9.07 should be changed to \$12.42. And in my
- 4 rebuttal testimony, on page 9, line 180, the number 12 should be
- 5 changed to the number 48. And on line 9 -- on page 9, sorry,
- 6 line 184, after the word "No," add a comma and the phrase "other
- 7 than the change from 48 months to 12 months." Then on page 12
- 8 of my rebuttal, between the -- in the -- in the chart that
- 9 appears just before line 244, in the label for the rolling
- 10 48-month coal-generation line, replace the number for
- 11 December '08 of 45,304,825 megawatt-hours with 45,254,472
- 12 megawatt-hours. And finally, on page 16 of my rebuttal
- 13 testimony, line 340, replace "OCS's adjustment" with "the OCS
- 14 and division adjustments." And on page 16, line 341, replace
- 15 "OCS's adjustment is" with "the OCS and Division adjustments
- 16 are." Those are all the corrections I have.
- Q. So Mr. Duvall, taking into account those
- 18 corrections, if I were to ask you the same questions that are
- 19 set forth in your prefiled testimony today, would your answers
- 20 be the same?
- 21 A. Yes, they would.
- MS. McDOWELL: We would offer the direct rebuttal
- 23 and supplemental testimony of Mr. Duvall along with the exhibits
- 24 listed on our testimony and exhibit list.
- 25 CHAIRMAN BOYER: Is there any objection to the

- 1 admission of Mr. Duvall's direct rebuttal, supplementary
- 2 rebuttal, and exhibits as corrected? Seeing none, they are
- 3 admitted.
- 4 MS. McDOWELL: And Chairman Boyer, I'd just like to
- 5 take a minute here to offer the testimony of David Godfrey also
- 6 on the power comp issue. No party had questions for Mr. Godfrey
- 7 so he will not be appearing today, so just as an administrative
- 8 matter we would like to offer his testimony in the record at
- 9 this time as well.
- 10 CHAIRMAN BOYER: Why don't you identify that for us.
- 11 MS. McDOWELL: It's the rebuttal testimony of David
- 12 Godfrey filed on November 12, 2009, addressing transmission and
- 13 distribution capital expenses. It's also listed on our
- 14 testimony and exhibit list.
- 15 CHAIRMAN BOYER: Thank you. Is there any objection
- 16 to the admission of Mr. Godfrey's testimony? Seeing none, it is
- 17 also admitted.
- MR. GINSBERG: While we're doing that, can we go
- 19 ahead and admit the other two witnesses where there was no
- 20 cross-examination --
- 21 CHAIRMAN BOYER: Yes, I think this would be an
- 22 appropriate time to do that, Mr. Ginsberg.
- MR. GINSBERG: Excuse me?
- 24 CHAIRMAN BOYER: This would be an appropriate time
- 25 to do that.

- 1 MR. GINSBERG: Okay. It's the testimony of Jamie
- 2 Dalton, which was DPU Exhibit... DPU Exhibit 13, and the
- 3 testimony of Mr. Wheelwright, which was DPU Exhibit 12. And the
- 4 exhibit numbers are all identified on the exhibit sheet that we
- 5 provided the commission.
- 6 CHAIRMAN BOYER: Thank you, Mr. Ginsberg. Any
- 7 objection to the admission of Mr. -- the testimony of
- 8 Mrs. Dalton or Wheelwright? Seeing none, they are admitted into
- 9 evidence as well.
- 10 MR. GINSBERG: Thank you.
- 11 CHAIRMAN BOYER: Thank you. Miss McDowell?
- MS. McDOWELL: Thank you, Chairman.
- 13 Q. Mr. Duvall, have you prepared a summary of your
- 14 testimony?
- 15 A. Yes, I have.
- 16 Q. Have you asked me to distribute three exhibits that
- 17 are from your rebuttal, prefiled rebuttal testimony?
- 18 A. Yes, I have.
- 19 Q. Can you proceed to give the Commission your summary?
- 20 A. Okay. Good morning, again, Mr. Chairman,
- 21 commissioners. The summary of my testimony will address the 14
- 22 remaining contested net power cost issues in this case. All
- 23 remaining contested issues concern how to model net power costs
- 24 on a normalized basis. There are no claims that RMP has been
- 25 imprudent.

- 1 First, however, I'd like to make some general
- 2 observations that -- for reference, the current rates in -- in
- 3 rates net power cost are a billion 30 million, or \$17.22 per
- 4 megawatt-hour. Rocky Mountain Power is requesting to set net
- 5 power costs at 1,018,000,000, or a -- \$12 million below what's
- 6 currently in rates. The lowest individual proposal from the
- 7 committee is to set net power costs at 965 million, which
- 8 represents a \$65 million reduction from those -- the current
- 9 levels of net power cost.
- Table 1, which is embedded in my testimony and has
- 11 been handed out to you by Ms. McDowell, shows the historic and
- 12 forecast net power costs. So this was the one that's labeled
- 13 Actual Net Power Costs, Net Power Costs, Projections and
- 14 Proceedings. By looking at Table 1, it's clear that we're at
- 15 the bottom of a trough. Net power costs have been higher in the
- 16 past, and they're expected to go higher in the future. It's
- 17 also clear that setting net power cost below -- at the levels
- 18 that other parties propose, which are \$17 or less per
- 19 megawatt-hour, are unreasonable. And given that Rocky Mountain
- 20 Power has agreed not to charge -- not to change its net power
- 21 costs outside of an ECAM until September 2011, Rocky Mountain
- 22 Power forecasts it will under-collect net power costs in Utah
- 23 during the time the proposed rates are in effect beyond the test
- 24 period in this case, even if the company gets its full request.
- I sponsored seven revisions that I believe complied

- 1 with the Commission's 2007 general rate case order. Each
- 2 revision improves the accuracy of net power costs. It was
- 3 either sponsored by another witness or sponsored by myself as an
- 4 item that was in process and not been completed by the time that
- 5 we filed our direct case. Each of these items reflect known and
- 6 measurable changes, were available before the parties filed
- 7 their direct testimony, and that they are easy to audit. And I
- 8 validated each one of these in my testimony.
- 9 Market caps, a new issue this time. Only four years
- 10 ago, in the Commission's October 2005 order in the order cost
- 11 docket, the commission found that the company's "coal resources"
- 12 are back down some hours, and use of a production cost model
- 13 including market caps is necessary to accurately identify
- 14 production costs. The evidence in this -- in that case showed
- 15 that coal backed down by an average of about 156 average
- 16 megawatts. Evidence in this case confirms that has not changed.
- On page 12 of my testimony, this is the second chart
- 18 that has been handed out, this is the one where I've corrected a
- 19 number. The handout has the corrected number on it. I present
- 20 a chart that shows actual coal generation for the last ten
- 21 years. And the chart establishes three important facts. First,
- 22 by removing market caps, Mr. Falkenberg models coal generation
- 23 at 46.1 million megawatt-hours, which exceeds actual coal
- 24 generation by almost any measure. Then Mr. Falkenberg's measure
- 25 of actual -- actual coal generation which he compares the model

- l results to is based on the 12 months ending December 2008, which
- 2 is 46 million megawatt-hours, which the chart validates is an
- 3 abnormally high level to be comparing the results of power cost
- 4 studies to.
- 5 And finally, applying the commission-approved caps,
- 6 Rocky Mountain Power models coal generation at 45 -- 45.3
- 7 million megawatt-hours, which we believe is reasonable as
- 8 validated by this -- by this chart. The 45.3 million
- 9 megawatt-hours exceeds any of the 48-month average, rolling
- 10 average numbers that are shown on the chart. So there's no
- 11 basis for the Commission to reverse their prior decision
- 12 approving market caps.
- Wind integration. In my direct testimony I
- 14 presented seven pages of discussion and a 15-page exhibit
- 15 supporting the company's 2008 wind integration study that's
- 16 included in its 2008 integrated resource plan in order to
- 17 validate the company's wind integration costs.
- And then on page 36 of my testimony, which is the
- 19 final page of the three handouts that you have received, I
- 20 present a summary of the parties' initial positions at the time
- 21 that I filed my rebuttal testimony. In my rebuttal testimony I
- 22 adopted the OCS position, so we moved from \$6.91 to \$6.62. In
- 23 their third rebuttal testimony the Division modified their
- 24 proposal to \$4.81.
- I present evidence in my rebuttal testimony that

- l shows that UAE's proposal is flawed and should be not considered
- 2 as a reasonable alternative by the Commission. It's interesting
- 3 to note that all parties except EPA's intra-hour costs are at
- 4 least \$5.89 per megawatt-hour, which is the last column there,
- 5 yet argue that RMP's intra-hour costs should be no greater
- 6 \$4.83.
- 7 On a related item, the office has also recommended
- 8 that the costs associated with facilities that are not owned or
- 9 not purchased by Rocky Mountain Power but reside in our control
- 10 area, that the costs associated with providing wind integration
- 11 services to those facilities not be included for rate making.
- 12 That -- that is an unreasonable proposal, since Rocky Mountain
- 13 Power is obligated to interconnect to any generation facility
- 14 that locates in its control area, and we're not allowed by FERC
- 15 tariff to discriminate against wind facilities.
- On the minimum loading and heat rate duration I
- 17 would simply point you to my -- refer you to my JND 4R and 5R.
- 18 And these -- these two exhibits are pictures of heat rate curves
- 19 in my rebuttal testimony. These two exhibits validate that
- 20 Mr. Falkenberg's proposed adjustments to the rate heat rate are
- 21 based on artificial model inputs and should be rejected. The
- 22 Company uses actual heat rate curves, and Mr. Falkenberg alters
- 23 those in a manner that they don't reflect accurate information
- 24 anymore.
- 25 For the minimum duration of the plants,

- 1 Mr. Falkenberg has also assumed an artificial modeling
- 2 assumption by setting the minimum generation levels of all 36 of
- 3 RMP's thermal unit levels to levels that they're incapable of
- 4 achieving.
- 5 The value of startup energy. Rocky Mountain Power's
- 6 position on this has been consistent, that there is no net value
- 7 to startup energy because much of the ramping's controlled by
- 8 hydro, and there are efficiency losses that have to do with
- 9 redispatching hydro and thermal resources to levels that are no
- 10 longer optimal within the hour. These additional costs are not
- 11 captured by GRID, they would offset any cost savings from the
- 12 startup energy.
- In addition, in my rebuttal testimony I show that
- 14 the inclusion of startup energy by Mr. Evans and Mr. Falkenberg
- 15 is modeled incorrectly. While they include the startup energy,
- 16 they don't include the time in the GRID model for the units to
- 17 start up. And making that correction would validate the
- 18 Company's position that there are no -- no net -- no net value
- 19 to startup energy.
- 20 Mr. Falkenberg make an additional error in that --
- 21 in his value of startup energy by assuming that -- that energy
- 22 that's produced within the hour can be sold in the hourly
- 23 markets. That's just not possible.
- 24 Short-term firm synchronization. In my rebuttal
- 25 testimony I show that Rocky Mountain Power's approach to the

- 1 treatment of short-term firm transmission costs, where we use
- 2 the current estimate of expenses and a four-year average for the
- 3 usage, is a valid normalizing technique. Rather -- and I also
- 4 show that Mr. Falkenberg's adjustment is invalid. Rather than
- 5 taking the four years' average of short-term firm wheeling
- 6 expense as he claims, he's actually converted these contracts
- 7 from capacity contracts to energy and modeled them in GRID, so
- 8 that he only captures the expenses associated with the usage of
- 9 the contracts. This is -- this is not -- these are -- this is
- 10 just like option contracts and ignoring the premium costs. And
- 11 if calculated as he claimed, if he just took the four years
- 12 of -- four-year average of historic short-term firm expenses and
- 13 averaged them, the adjustment would be far less than what he
- 14 proposes, and would only be about 1.8 billion on a company
- 15 basis.
- 16 Planned outages, this is a fairly small adjustment.
- 17 Mr. Evans has presented a planned outage schedule that modifies
- 18 the schedule presented by the Company. I show that his
- 19 adjustment is arbitrary and can't be replicated on a long-term
- 20 basis. Mr. Falkenberg then adopts Mr. Evans' schedule, but then
- 21 shifts Currant Creek from the fall to the spring. This shifting
- 22 puts three of our four combined tibo combustion turbines in the
- 23 spring, and so I believe it's unbalanced and it ignores the fact
- 24 that Currant Creek was on planned outage in the fall of this
- 25 year.

- On monthly and daily screens, the Company's
- 2 implemented the monthly screens adopted by the Commission in the
- 3 2007 general rate case as recommended by Mr. Falkenberg in that
- 4 case. Mr. Falkenberg now proposes to use a -- daily screens
- 5 based on the notion that the dispatchers make daily decision
- 6 based on daily changes in the facts about loads and resources
- 7 and market prices and all that. I -- I point out in my rebuttal
- 8 that GRID, or any other model for that matter, is not that
- 9 sophisticated. The GRID receives one input, and it doesn't
- 10 change once the inputs are set, and that the use of the daily
- 11 screens is inconsistent with the level of complexity of the
- 12 model.
- The Troy-Faste upgrade, this, again, is small, but
- 14 it's based on an assumption, an artificial assumption that
- 15 389 megawatts of transmission are available to deliver troy to
- 16 the system when in fact there's only 387 megawatts that
- 17 physically exists.
- The smut shaping, the transmission imbalance, and
- 19 the biomass nongeneration agreement, my testimony presents
- 20 additional data and rationale on each of these issues since they
- 21 were heard by the Commission last. In each case the new
- 22 information provided validation for reversing the Commission's
- 23 decision on these issues.
- In conclusion, I'd like to make three points. The
- 25 first point is that no party has claimed that Rocky Mountain

- 1 Power has been imprudent. These are all modeling issues.
- 2 Secondly, Rocky Mountain Power has presented a significant body
- 3 of evidence to validate its net power cost recommendations and
- 4 refute the proposed adjustments from other parties. And third,
- 5 Rocky Mountain's request of \$17.48 per megawatt-hour is forecast
- 6 under-recovered net power costs during the period rates would be
- 7 on effect beyond the test period even if the Commission grants
- 8 the Company's full request.
- 9 Based on this, I urge the Commission to grant the
- 10 Company's request. Thank you.
- 11 Q. Does that conclude your summary, Mr. Duvall?
- 12 A. It does.
- MS. McDOWELL: This witness is available for
- 14 cross-examination.
- 15 CHAIRMAN BOYER: Thank you, Mr. Duvall. Let's begin
- 16 with Mr. Ginsberg for the Division of Public Utilities.
- 17 CROSS-EXAMINATION
- 18 BY MR. GINSBERG:
- 19 Q. Good morning, Mr. Duvall.
- 20 A. Good morning, Mr. Ginsberg.
- 21 Q. If we could first start with this update issue.
- 22 It's the Company's position that you have -- unless the updates
- 23 that you have brought forth are included, that there should just
- 24 be no updates?
- 25 A. Well, the -- the Company's initial position was

- 1 there should be no updates. But when other parties proposed a
- 2 number of updates that we -- we did change between the direct
- 3 testimony and the rebuttal testimony to agree to a limited
- 4 number of updates.
- 5 Q. Your initial position, you mean when you filed the
- 6 case?
- 7 A. In the direct testimony, correct.
- 8 Q. Now, you understand that updates are taking place in
- 9 the revenue requirement phase of the case outside of net power
- 10 costs?
- 11 A. That's my understanding.
- 12 Q. For example, one of the examples that you bring up
- 13 is the High Plains hydro -- wind plant; is that right?
- 14 A. That's correct.
- 15 Q. And you understand that when the Company initially
- 16 filed its case, the capital cost for that plant was \$70 million?
- 17 A. I'm not familiar with it, but I'll take that,
- 18 subject to check.
- 19 Q. You're not suggesting that the updates in the rest
- 20 of the case not occur, are you?
- 21 A. No, I'm not.
- Q. What is unique about net power cost that we should
- 23 have no updates?
- 24 A. I don't believe there's anything unique about net
- 25 power costs that we shouldn't have updates. I think what's

- 1 happened in the past is that -- that the updates have been very
- 2 selective. And I think my testimony is that we would prefer
- 3 some guidance on the Commission this terms of, you know, what
- 4 gets updated, what are the rules for updating so that it could
- 5 be fair going forward.
- 6 Q. One of the areas that you included was this Idaho
- 7 Power wheeling contract. Is that right?
- 8 A. That's correct.
- 9 Q. Now, when you initially filed your case, I believe
- 10 the Idaho Power contract was an increase of \$2 million. Is that
- 11 right?
- 12 A. I believe that's right, yes.
- 13 Q. And you indicated that in September, new information
- 14 became available that increased it to 11 million?
- 15 A. Yeah. There -- there's actually two -- two
- 16 contracts with Idaho Power. They all have to deal with the
- 17 delivery of power out of the Bridger facility. The -- there's
- 18 the RTSA, or what's called Restated Transmission Service
- 19 Agreement, and the IT -- ITSA, which is the Integrated
- 20 Transmission Service Agreement. Both of those, at the time we
- 21 had filed we knew the changes to the RTSA, but we didn't know
- 22 the changes to the ITSA, and those are what are included in our
- 23 rebuttal testimony.
- Q. And when do those changes become known? I think you
- 25 say September?

- 1 A. Yeah, I think that's right.
- 2 Q. And that also a fair characterization of the
- 3 other -- the... I have a few questions about the planned outage
- 4 adjustment. You indicated in your summary it's both a DPU and
- 5 CCS adjustment?
- 6 A. Yeah. The schedule proposed by Mr. Evans was then
- 7 adopted by Mr. Falkenberg, and then Mr. Falkenberg made one
- 8 additional change.
- 9 Q. And I think you indicate in your testimony that
- 10 since it's relatively small compared to past cases, is that --
- 11 it should basically not take place?
- 12 A. No, no, I didn't say that at all. I mean, but it is
- 13 relatively small. I think the last time we were here, the
- 14 maintenance or the planned outage adjustment was 10 to \$12
- 15 million. As I recall, it's about 300,000 in this case.
- 16 Q. Is the adjustment size for planned outages affected
- 17 by the cost of replacement power that you assume in the model?
- 18 A. Yes, it would be.
- 19 Q. So would it be fair to say that if, as you called
- 20 it, a trough is occurring in this case with a low forward price
- 21 curve, and that the size of adjustment in the future could be
- 22 higher, depending on what the market price of power is?
- 23 A. Well, the trough is not a result of forward price
- 24 curves and market prices; it's a result of many other factors.
- 25 That's one of the factors. And to the extent the forward price

- 1 curves go up, then I think the -- the adjustment for the planned
- 2 outages would probably increase. But I wouldn't expect it to
- 3 increase a whole lot.
- 4 Q. Now, the Division's adjustment or Mr. Evans's
- 5 adjustment was to manually adjust the GRID model to what he
- 6 would say more accurately reflects the four-year -- normalized
- 7 four-year level of planned outages. Is that a fair
- 8 characterization?
- 9 A. Well, yeah. He -- in his testimony, in his
- 10 surrebuttal testimony, on page 4, line 74, he identifies what he
- 11 calls a flaw. And the flaw is that what the Company has done is
- 12 to -- required outages at a particular coal plant follow one
- 13 another with no overlap, and then he says this is a perfectly
- 14 reasonable requirement. But he's then trading that off with the
- 15 requirement to try to be actual. So we've got sort of competing
- 16 requirements here as to what's important.
- Q. But the answer to my question was he was trying to
- 18 more reflect what actually is taking place?
- 19 A. He was, that's correct.
- 20 Q. You don't disagree that that was accomplished by
- 21 that attempt to try to more to reflect what actually is taking
- 22 place?
- 23 A. No, I don't disagree with that.
- Q. I have a few questions on the startup energy. And
- 25 do I understand it right that the GRID model, you input into the

- 1 GRID model the startup energy, it's not in the model itself?
- 2 A. Well, it's sort of --
- 3 Q. Startup fuel?
- 4 A. Yes and no. Because it is in the model in terms of
- 5 the commitment decision, but when the -- when the -- at the end
- 6 of the day, when it reports out net power costs, it doesn't pick
- 7 up that -- those hours.
- 8 Q. So you go through each plant and determine how much
- 9 startup fuel is needed to start up the plant, and then the model
- 10 assumes that the plants start when they reach minimum loading.
- 11 Is that right?
- 12 A. That's right. And it's just for the gas plants.
- 13 Q. So that period of time between the time the plant
- 14 starts up and the time it reaches minimum loading, the GRID
- 15 model isn't actually calculating what happens there?
- 16 A. That's true.
- Q. And you would agree that something happens there;
- 18 would you not?
- 19 A. Well, yeah. And I mean, if -- the way the model's
- 20 set up is the plants have -- physically have minimum down times
- 21 before they can restart. Once you shut them down, you got to
- 22 keep them down, Lake Side and Currant Creek for six hours and
- 23 Chehalis for eight hours. And so in the GRID model, since it
- 24 starts things up just right to full load at moment one, in order
- 25 to -- if you're going to include startup energy into the model,

- 1 you need to allow for two to three hours of startup time in
- 2 order to make sure that if you're including that startup energy,
- 3 that you're not double-counting or over-counting to all of the
- 4 startup costs.
- 5 Q. How long does it take to reach minimum loading for
- 6 these plants?
- 7 A. It's about two hours on Lake Side and Currant Creek
- 8 and three hours on Chehalis.
- 9 Q. And that energy is going somewhere, is it not, when
- 10 it starts up?
- 11 A. Well, it -- it is. But I... the... In the GRID
- 12 model, if you don't allow for the extra time for startup, you've
- 13 got the full amount of energy plus the startup energy, you've
- 14 got too much energy. So you have to -- you have to allow the
- 15 two to three hours of startup time when that energy's delivered.
- 16 So if -- if you include that in GRID, then that's -- that was
- 17 the correction I pointed out, that you'd need to make that
- 18 adjustment to GRID if you were to include the startup energy.
- 19 Q. Both the DPU and CCS have an adjustment on this
- 20 area; is that correct?
- A. Yes, they do.
- Q. And they calculate it differently, the effect of the
- 23 value of the startup energy?
- 24 A. They did.
- 25 Q. One uses market prices; is that right?

- 1 A. Yeah. What -- Mr. Falkenberg just puts energy in
- 2 the GRID model and lets GRID do what it will do with it, so it
- 3 allows it to sell to markets. And that was the -- the second
- 4 error I pointed out in his adjustment.
- 5 Q. And the Division uses average coal prices; is that
- 6 right?
- 7 A. Yes, they do.
- 8 Q. Now, you -- in response, you basically say that when
- 9 these units start up -- and do they usually start up in the
- 10 morning?
- 11 A. Typically they would start up in the morning, that's
- 12 right.
- 13 Q. And you say that they are -- I think it's line 527.
- 14 A. Of my rebuttal?
- 15 Q. Yeah. Yes, sir.
- 16 A. Okay.
- 17 Q. You indicated that what it's primarily replacing
- 18 is -- or primarily producing is hydro. Is that right?
- 19 A. That's correct.
- 20 Q. Now, again, does the model tell you that?
- 21 A. No.
- Q. Hydro actually has a value; does it not?
- 23 A. Well --
- Q. Later in the day?
- 25 A. If you don't lose -- hydro is energy-limited. So if

- 1 you don't generate it in one hour and you don't spill it, then
- 2 you can generate it at some other hour. And the value or cost
- 3 would be the difference between the market prices or the value
- 4 of that energy when you used it.
- 5 Q. So that value of that hydro could have a high value
- 6 later in the day?
- 7 A. Well, the -- when -- when you're starting up a
- 8 plant, you have to basically deoptimize the system from where it
- 9 was. And so if you were planning to use your -- use your hydro
- 10 in a certain way, and because you had your gas plant on you had
- 11 to ramp up your hydro, so as your gas plant comes on you can
- 12 back down your hydro. You just deoptimized the system,
- 13 increased your cost over what it would be without the startup.
- 14 So you've actually increased your system costs in that -- in
- 15 that case.
- 16 Q. If we could, the handout exhibit that you have on
- 17 here for the wind, do you have that in front of you?
- 18 A. Yes, I do.
- 19 Q. I just wanted to sort of put in perspective where
- 20 we've come from on this wind. Was the first time that wind
- 21 integration was introduced was in the '07 rate case?
- 22 A. It was -- I believe it was the '07 case.
- 23 O. And at that time were there -- inter-hour wind
- 24 charges were calculated as five percent of the amount of wind
- 25 available? Is that -- is that how you did that?

- 1 A. I'm not sure I understand the question.
- Q. As I understand it, before this case for inter-hour
- 3 wind charges, it was a -- five percent of wind capacity was the
- 4 charge.
- 5 A. I don't recall that. I don't believe that's what we
- 6 did.
- 7 Q. How did you do it?
- 8 A. Well, for -- there were no inter-hour charges
- 9 explicitly made. This is all the result of the new wind
- 10 integration study from the 2008 IRP.
- 11 Q. Okay. So for the '07 and '08 rate cases there were
- 12 no inter-hour?
- 13 A. That's correct.
- Q. And then for intra-hour charges for the '07 rate
- 15 case, it was \$1.14?
- 16 A. That's correct. And I just represented what we
- 17 called the forecasting error, which is it didn't include any of
- 18 the costs for ramping up and ramping down to follow the known
- 19 changes of the wind during the hour.
- 20 Q. And then also in the '08 rate case, which I -- I
- 21 guess the test year was 2009. Is that right?
- 22 A. That's correct.
- Q. Half of this test year; is that fair?
- A. Correct.
- Q. The intra-hour charges were \$1.16?

- 1 A. That's correct. And that, again, was just the --
- 2 this was before we completed our -- our wind integration study
- 3 and the IRP.
- 4 Q. And that's bringing in the regulate-up and regulate-
- 5 down functions of the intra-hour charges?
- A. Yeah, after -- after the \$1.16. The \$1.16 was just
- 7 the forecast error.
- 8 Q. So that was the -- this -- the IRP, which I guess
- 9 was filed in June. Is that right?
- 10 A. It was May.
- 11 Q. May, was the first time that these regulate-up,
- 12 regulate-down charges were introduced into this rate case in
- 13 every case?
- 14 A. That's correct.
- 15 Q. And at least you presented those in your IRP. Is
- 16 that -- is that what I understood?
- 17 A. That's correct.
- 18 Q. And then parties filed comments on those within the
- 19 IRP process?
- 20 A. They did.
- 21 Q. How much wind do you have currently?
- 22 A. I can tell you how much we have in this case.
- 23 Q. Okay.
- A. In this case we have 1,524 megawatts that are under
- 25 our control, and then there's another, I believe, about 200 that

- 1 are under Bonneville's control.
- 2 Q. And has that amount been added over the last few
- 3 years to reach that level?
- 4 A. Yes, it has.
- 5 Q. Do you happen to know when your first wind plant was
- 6 installed?
- 7 A. Well, the first one that's still running is Foote
- 8 Creek One. And that was, I believe, installed in about 1998,
- 9 give or take a year.
- 10 Q. And is -- you have 1,400 megawatts. What are the
- 11 plans for wind for the next few years?
- 12 A. Well, we have in our IRP, we obviously have the plan
- 13 to reach 2,000 by the year 2013.
- 14 Q. So as wind is added, it is the Company's position
- 15 that more regulating reserves are required to be added to the
- 16 system?
- 17 A. That's correct.
- 18 Q. Has the Company provided any evidence to show that
- 19 the amount of regulating reserves has actually increased since
- 20 wind has been added to the system?
- 21 A. Well, we've provided the 15-page appendix out of the
- 22 IRP to describe all of these. We've provided in discovery the
- 23 wind integration model to all the parties so they can go through
- 24 it and validate that the numbers were calculated up correctly.
- 25 Q. Is wind also done outside of the GRID model?

- 1 A. The wind integration charge --
- 2 O. Yes.
- 3 A. -- is calculated outside of the GRID model, and in
- 4 fact it's done through a wind -- the intra-hour is calculated
- 5 using a wind integration model that the Company developed. It's
- 6 an intra-hour model.
- 7 Q. So that charge that you're proposing was calculated
- 8 independent of GRID?
- 9 A. That's correct.
- 10 Q. And then how does it get into GRID?
- 11 A. Well, it doesn't really get into the model GRID, it
- 12 gets into the net power costs, by adding them together.
- 13 Q. So you just take the GRID results, and then I
- 14 think -- I think I understand that this wind integration charge
- 15 is worth about \$28 million. Is that -- is that right?
- 16 A. It's -- I -- I believe that's about right. It's
- 17 \$4.83 per megawatt-hour for the intra-hour.
- 18 Q. So the intra-hour is worth 28 million. Is the total
- 19 amount then worth more than that?
- 20 A. No. The two -- the combined total is worth about in
- 21 that ballpark.
- 22 Q. So that dollar amount is then just added to the net
- 23 power cost results that come out of GRID?
- A. That's correct.
- 25 Q. Now, GRID function is to simulate the operation of

- 1 the system; is it not?
- A. Well, it is. And in regard to the wind integration,
- 3 we look at -- at intra-hour costs. GRID is an hourly model, it
- 4 can't simulate intra-hour cost, and that's the cost that we look
- 5 at for the purposes of wind integration. And that's why we
- 6 built an intra-hour model that looks at the ten-minute data in
- 7 order to see what kind of costs that are associated with ramping
- 8 up and ramping down and discovering forecast error.
- 9 Q. But it's sort of an independent model separate from
- 10 the effects of operation of the system within the GRID itself?
- 11 A. Well, it's separate from GRID, but it has a --
- 12 what's called reserve stack. It looks at what the incremental
- 13 costs are for following the -- for meeting the wind integration
- 14 costs.
- 15 MR. GINSBERG: Thank you. That's all I have.
- 16 CHAIRMAN BOYER: Thank you, Mr. Ginsberg.
- 17 Mr. Proctor?
- MR. PROCTOR: Thank you, Mr. Chairman.
- 19 CROSS-EXAMINATION
- 20 BY MR. PROCTOR:
- 21 Q. Mr. Duvall, I have also some questions about the
- 22 updates that you made in your rebuttal. First of all, the Idaho
- 23 Power transmission contract, and I believe you referred to it as
- 24 the ITSA; is that correct?
- 25 A. Well, there's -- there's two contracts, the RTSA and

- 1 the ITSA.
- Q. Which one of those is involved in the FERC
- 3 proceeding that PacifiCorp has intervened in?
- 4 A. That's the ITSA.
- 5 Q. And that was the one that in direct testimony you
- 6 opined was estimated to increase net power costs by about two
- 7 million?
- 8 A. No, that was the RTSA.
- 9 Q. And then there was another amount in your direct
- 10 testimony, and that -- line 98, page 5, for those who want to
- 11 look, about a -- well, wheeling expenses of approximately
- 12 \$12 million increase in net power cost. Is that --
- 13 A. That's right.
- 14 Q. So is the ITSA the one that is -- is that in the
- 15 \$12 million number that you put in your direct testimony?
- A. No, it's not.
- Q. But you did testify that -- that the Company knew
- 18 that Idaho Power was requesting an increase in that contract; do
- 19 you not -- did you not?
- 20 A. Well, they were -- they were looking to raise their
- 21 wheeling rates any way they could, and they were in the process
- 22 of doing that.
- Q. And on June 19th of this year they filed with the
- 24 FERC seeking a rate increase at that time?
- 25 A. I'll accept that.

- 1 Q. And that increase was from \$186 -- excuse me --
- 2 \$186,924 to \$3,477,725 per year, correct?
- 3 A. That sounds right.
- Q. Later on, in a data response, you -- the Company
- 5 stated that they estimated the increase to be about 3.7 million.
- 6 Do you recall that?
- 7 A. I don't recall that.
- Q. Did you respond to that data response or did someone
- 9 else?
- 10 A. I would have to look at it.
- 11 Q. Okay. And PacifiCorp intervened in that matter and
- 12 protested that increase; did they not?
- 13 A. Yes, that's my understanding.
- Q. And they protested it for a number of reasons. Are
- 15 you familiar with those reasons?
- 16 A. I am not familiar with those reasons.
- 17 Q. Have you been asked to advise the Company pertaining
- 18 to that transmission contract and the rate increase?
- 19 A. No, I have not.
- 20 Q. So that's taken place outside of your -- your
- 21 purview?
- 22 A. That's correct.
- Q. Do you know whether or not FERC has taken any action
- 24 on the protest?
- 25 A. I really don't know the status of that.

- 1 Q. Now, you stated in your rebuttal testimony, and it
- 2 begins on page -- line 150 of page 7 and carries on until
- 3 page 8, and you're outlining the updates that you wish to make.
- 4 And 6, the rebuttal NPC should reflect changes to the Company's
- 5 wheeling contracts with Idaho Power Company and BPA that
- 6 occurred as early -- let's see -- as of early September.
- 7 Transposition. Is that a reference to the Idaho Power contract?
- 8 A. The 11.1 million?
- 9 Q. No. Beginning at line 150 on page 7 of your
- 10 rebuttal testimony, over to line 154. Yeah, you're -- there's
- 11 an \$11 million figure, I didn't read that. My question is the
- 12 contract changes that you were referring to at line 150 to 152,
- 13 does that include the Idaho Power contract?
- 14 A. Yes, it does.
- 15 Q. But are those changes, however, only temporary in
- 16 the sense that according to the FERC, they're subject to refund?
- 17 A. Well, the FERC I believe typically makes their rates
- 18 subject to refund.
- 19 Q. Do you know whether the FERC has offered a
- 20 preliminary analysis of Idaho Power's request to increase the
- 21 rate?
- 22 A. No, I do not.
- Q. Would it surprise you that they have found that
- 24 Idaho Power -- at least a preliminary analysis indicates that
- 25 Idaho Power's proposal has not been shown to be just and

- 1 reasonable?
- 2 A. I don't have any knowledge of that.
- Q. Well, you do know that the Company protested the
- 4 matter, correct?
- 5 A. Yes, I do.
- 6 Q. And you do know also that the increase is
- 7 approximately 1,700 percent to that contract; do you not?
- 8 A. Well, I know what the -- I presume you calculated
- 9 that correctly, but the increase is what it is. It's -- you
- 10 know, the 3.7 million I guess is what you said.
- 11 Q. Well -- yes, 3.4. Would it surprise you under that
- 12 circumstance then, that the FERC's preliminary analysis also
- 13 concluded that --
- MS. McDOWELL: You know, I'm going to object to this
- 15 question because this witness has said he is not familiar with
- 16 these issues, so I don't think there's any foundation for the
- 17 continuing line of questions into this area.
- MR. PROCTOR: Mr. Chairman, he's appearing here
- 19 certainly as somebody who's responsible for the regulatory
- 20 aspect of net power costs. This is certainly a net power cost.
- 21 He has in his testimony requested a reimbursement of this
- 22 amount. And I'm certain that Mr. Duvall is very aware of the
- 23 manner in which FERC reviews transmission contract rate
- 24 requests, and in particular, where this company has, as he has
- 25 stated, protested the matter. I think I'm -- I don't have much

- 1 more to go, but I think I'm entitled to ask these questions.
- 2 CHAIRMAN BOYER: Well, I think it's appropriate for
- 3 you to ask if he knows of the preliminary findings of the FERC.
- 4 And I guess you could ask if he's surprised, and he can say yes
- 5 or no, he's not surprised. I don't know what probative value
- 6 that gives to the proceedings though. To that extent I'm going
- 7 to overrule the objection.
- 8 MR. PROCTOR: I'll just go on. Thank you,
- 9 Mr. Chairman.
- 10 Q. Mr. Duvall, did you -- you didn't disclose any of
- 11 the -- the fact that there was a protest in the size of the
- 12 increase, or that there was a pending proceeding in FERC to this
- 13 commission in your rebuttal testimony, did you?
- 14 A. No, I didn't. And let me just --
- 15 Q. If I may, I just want to ask you one more question,
- 16 and then you can answer the question that you wanted to answer.
- 17 Is that because you didn't --
- MS. McDOWELL: I'll object to that. You know, he's
- 19 entitled to answer the question that he's asked, and if that --
- 20 you know, if he needs to explain his answer, he's entitled to do
- 21 that.
- MR. PROCTOR: If you just let me ask this one
- 23 question, then he can carry on.
- 24 CHAIRMAN BOYER: Ask your question, Mr. Proctor.
- 25 Q. (By Mr. Proctor) Is that, Mr. Duvall, because you

- 1 didn't know that this was going on?
- 2 A. That I didn't know that what was going on?
- 3 Q. That the protest, the amount of the increase, you
- 4 didn't put it in your rebuttal because you didn't know about it?
- 5 A. No, I -- I knew about it. And frankly, this --
- 6 Idaho Power is in the process of setting their rates to their
- 7 correct tariff rates, their current point-to-point service
- 8 rates. The contract that we've had with them is a very old
- 9 contract with very old rates. And it wouldn't surprise me
- 10 that -- that the -- in today's environment, if they've asked to
- 11 set their transmission rates to compensate them for their
- 12 current service charges, that they would prevail.
- 13 Q. Is that the position of the Company in the -- before
- 14 FERC, that, yes, they're entitled to that rate increase?
- 15 A. That is my -- my opinion of the -- I mean, it's just
- 16 my -- my thinking of the situation. They're asking for
- 17 basically full recovery. And we're -- they're coming off a
- 18 very, very, very old, low-cost wheeling contract.
- 19 Q. The Company responded to OCS data request 26.5. The
- 20 request was does the Company believe it is reasonable to assume
- 21 that Idaho Power will be granted 100 percent of the increased --
- 22 or excuse me -- its requested rate increase in FERC docket
- 23 ER-019335 even though the Company is protesting that increase.
- 24 Did you assist in answering that data response?
- 25 A. I believe I saw that data response.

- 1 Q. Did you provide input into its -- to the response
- 2 from the Company?
- 3 A. Actually, I --
- 4 MS. McDOWELL: Excuse me. Do you have a copy of the
- 5 data request you could show the witness?
- 6 MR. PROCTOR: The only one I have is with my notes
- 7 on it, unfortunately. I'll show that one to him, if that's
- 8 okay, and then you can just answer the questions that I've
- 9 written on here.
- MS. McDOWELL: Thank you.
- MR. PROCTOR: Isn't that easy?
- 12 CHAIRMAN BOYER: Let the record reflect that counsel
- 13 is showing Mr. Duvall a copy of an answer to a data request.
- 14 What's the -- what's the date, number of that data request --
- 15 THE WITNESS: That is OCS data request 26.5, dated
- 16 December 8th, 2009.
- 17 CHAIRMAN BOYER: Thank you.
- THE WITNESS: So no, I did not answer this.
- 19 Q. (By Mr. Proctor) Mr. Duvall, the final subject I
- 20 want to discuss briefly with you is this: You stated that if
- 21 this commission were to provide -- or to grant the Company its
- 22 requested net power cost, that the amount in rates would be
- 23 \$17.48 per megawatt-hour. Is that correct?
- 24 A. That is correct.
- 25 Q. But you also have asked them to consider the fact

- 1 that rates are projected by the Company to increase over the
- 2 next year and a half, up through December of 2011, correct?
- 3 A. That is correct.
- 4 Q. Are you asking this commission then to reject
- 5 adjustments to the net power cost because the Company has
- 6 projected beyond the test period in this case?
- 7 A. Not at all. It's just a point of reference for the
- 8 Commission to understand where power costs are expected to go in
- 9 the future.
- 10 Q. But the test period is ending June of 2010?
- 11 A. That's correct.
- MR. PROCTOR: Thank you, Mr. Duvall.
- 13 CHAIRMAN BOYER: Thank you, Mr. Proctor. Let's turn
- 14 now to Mr. Dodge, please.
- MR. DODGE: Thank you, Mr. Chairman.
- 16 CROSS-EXAMINATION
- 17 BY MR. DODGE:
- 18 Q. Good morning, Mr. Duvall.
- 19 A. Good morning, Mr. Dodge.
- 20 Q. The questions I have are on wind integration, not
- 21 surprisingly.
- 22 A. Not surprisingly.
- Q. Let's start with magnitude. Can you tell us
- 24 approximately how much in wind integration charges are being
- 25 recovered in rates today from customers? Let's say companywide,

- 1 to make it easier.
- 2 A. I believe that would have been based on the \$1.14
- 3 type number, so I think the number's in the range of 5 to
- 4 \$6 million.
- Q. And what is the number companywide that you're now
- 6 requesting, the increase from a high of six... the increase from
- 7 that number to today, what are you asking for?
- 8 A. Well, I think it's in the \$28 million type number.
- 9 Q. So that's a \$22 million increase. You'll
- 10 acknowledge that's substantive?
- 11 A. Well, it's based on our -- our current studies. I
- 12 think, again, the old study was based on one simple forecast-
- 13 error calculation, it used hourly information. We have
- 14 substantially improved our wind integration study; we've looked
- 15 at five components now, not just one component. It's not
- 16 surprising that -- that the numbers are higher.
- 17 Q. And my question was, you'll acknowledge that's a
- 18 substantive increase?
- 19 A. It's what it is.
- 20 Q. You don't consider \$28 million, or a \$22 million
- 21 increase, substantive to your customers?
- 22 A. I consider a \$22 million increase a \$22 million
- 23 increase.
- Q. Okay, we can quibble about that. In any event, you
- 25 will acknowledge that the Company has the burden of proof to

- l establish this \$22 million increase in cost; does it not?
- A. Absolutely. And that's why I put in the seven pages
- 3 of testimony and the 15-page exhibit out of the IRP --
- 4 Q. And we'll get to that.
- 5 A. -- the wind integration model and just tremendous
- 6 support for that number.
- 7 Q. And we'll get to that. We'll get through this much
- 8 quicker if you answer my questions without editorializing.
- 9 What -- you --
- 10 MS. McDOWELL: Objection. That was editorializing.
- MR. DODGE: And his was not?
- MS. McDOWELL: His -- he is answering the questions,
- 13 and I think he's entitled to do that.
- 14 MR. DODGE: If the Chairman wants to let him talk
- 15 all he wants, that will be the Chairman's call, obviously. But
- 16 I'm trying to --
- 17 CHAIRMAN BOYER: To speed up the process, if you
- 18 would answer Mr. Dodge's questions. And you'll have an
- 19 opportunity to editorialize, if you wish, or add to your answer,
- 20 clarify your answers during redirect by your own attorney,
- 21 Mr. Duvall.
- Q. (By Mr. Dodge) Mr. Duvall, do you also acknowledge
- 23 that there's a difference between a utility establishing what it
- 24 may charge third parties for wind integration costs and what is
- 25 appropriate to add to the GRID model for purposes of charging

- 1 ratepayers?
- 2 A. I -- I would say no. And in fact, I don't know of
- 3 any third parties that charge wind integration services that are
- 4 regulated by FERC.
- 5 Q. BPA charges wind integration charges to you; does it
- 6 not?
- 7 A. BPA is not regulated by FERC.
- 8 Q. Well, you added that qualification. You understand
- 9 that there may be -- well, let me -- maybe you don't acknowledge
- 10 it. You don't acknowledge any difference in the analysis by
- 11 this commission in determining whether the costs you're trying
- 12 to pass on to customers for wind integration costs, you don't
- 13 acknowledge any difference in that analysis than in the analysis
- 14 someone like BPA may go through to determine third-party charges
- 15 they will charge to an outside entity?
- 16 A. I think the answer would be no. I think the cost of
- 17 providing the services are the cost of providing the services.
- Q. With -- with -- captive ratepayers are, but you're
- 19 already charging for -- through GRID, right, for whatever it
- 20 determines is right; is that correct?
- 21 A. No, that's not correct. That was Mr. Higgins'
- 22 position.
- Q. You don't charge your customers for net power costs
- 24 determined through GRID?
- 25 A. We charge for net power costs.

- Q. And it's determined through GRID, primarily,
- 2 initially. Ignore wind -- wind integration cost for now, we'll
- 3 get back into it, but you use GRID to determine what to charge
- 4 your customers for net -- for net power cost, correctly --
- 5 correct?
- A. Yeah, for net power cost absent wind integration
- 7 costs.
- Q. Okay. And then the point is, in order to justify
- 9 charging customers something in addition, you have to establish,
- 10 one, that it's actually a cost to the company, correct, in order
- 11 to charge the customers? Would you agree with that?
- 12 A. I would agree with that.
- Q. And secondly, that it's not already captured through
- 14 GRID or other rate-making processes. Would you agree with that?
- 15 A. I'd agree with that. And I think that's exactly
- 16 what we've done with the wind integration.
- 17 Q. And in all of that you acknowledge you bear the
- 18 burden of proof?
- 19 A. That is correct.
- Q. Let's turn to page 39 of your rebuttal testimony,
- 21 Mr. Duvall. And we're going to be talking now about inter-hour
- 22 wind integration cost. And to establish a little bit of
- 23 background I think you've already testified to, to make -- but
- 24 to make sure we're on the same point, never before has -- has
- 25 this utility collected inter-hour wind integration costs from

- 1 its customers, it's always been intra-hour, correct?
- 2 A. That's correct.
- 3 Q. And on page 39 of your rebuttal, starting -- well,
- 4 you can start wherever you want. I'm starting on line 837,
- 5 where you say, as a result -- and you're talking here about
- 6 rebalancing for inter-hour wind integration -- the Company has
- 7 to take the prices that are available in the market. That is,
- 8 when the Company has to purchase to cover the newly identified
- 9 shortages, it may have to pay the prices offered the sellers.
- 10 And the next sentence, and it may have to take the prices that
- 11 buyers are willing to pay. You used "may" there deliberately;
- 12 did you not?
- 13 A. Well, I've used it there.
- 14 Q. And I assume it was deliberate?
- 15 A. I -- I guess so.
- Q. And let's turn now, if you will, to Appendix F,
- 17 which you say is your support to meet your burden of proof. And
- 18 if you will, turn to page 273 of Appendix F attached to your
- 19 direct testimony.
- 20 A. Okay.
- 21 Q. And again, this part of Appendix F is dealing with
- 22 the inter-hour cost that you're proposing to collect, correct?
- 23 A. Yes, it is.
- Q. And if you look at the first full paragraph, four
- 25 lines down, it says -- begins: PacifiCorp incurs transaction

- 1 costs every time it trades a block of 25 megawatts. These
- 2 transactions may vary, depending on the time of the day and
- 3 location, and are currently estimated to be about 50 cents per
- 4 megawatt-hour over-market for purchases to cover shortfall and
- 5 under-market to cover forecast excess -- I -- I skipped a few
- 6 words in there, but basically getting the context -- during most
- 7 transactional hours. Then you go on to say, this internal
- 8 assumption is generally accepted by balancing staff and is
- 9 consistent with the assumption used in Portland General's wind
- 10 integration study.
- Those are two data points you've offered this
- 12 commission to establish the 50-cent number you've used in this
- 13 calculation, correct?
- 14 A. That's correct.
- 15 Q. And one is internal staff, and one -- in a data
- 16 response you indicated there was nothing but verbal
- 17 communications, correct?
- 18 A. That's correct.
- 19 Q. So you're asking this commission to base millions of
- 20 dollars in rate increases on verbal hearsay from witnesses who
- 21 are not in this room to be cross-examined, that, trust us, we
- 22 suffer these costs. Is that basically the -- the result of your
- 23 request?
- MS. McDOWELL: You know, I want to object to that.
- 25 The -- the reference to hearsay is a legal point. Hearsay is

- 1 not applicable here. These are experts' studies and experts'
- 2 testimony, so the hearsay issue is just a non-issue. So I think
- 3 the question is an improper question.
- 4 MR. DODGE: May I respond to that, Mr. Chairman?
- 5 Hearsay certainly is appropriate. This commission is prohibited
- 6 by Utah law from basing the finding on hearsay.
- 7 CHAIRMAN BOYER: I think Ms. McDowell's point is
- 8 that Mr. Duvall is not qualified to testify as to whether these
- 9 discussions were hearsay or not. But if you'd just delete that
- 10 from your question --
- 11 MR. DODGE: Okay, I won't use that word.
- 12 Q. So you're asking this Commission to rely on verbal
- 13 statements from witnesses that are not here, based on
- 14 discussions you or someone else in your company has had, to
- 15 support this increase or this first time ever addition into
- 16 rates of inter-hour wind integration costs?
- 17 A. Well, these -- we're asking the Commission to accept
- 18 that our system operators have indicated that there is a cost of
- 19 incurring day-ahead trades, especially when you look at -- at
- 20 wind, which has -- we've got 1,524 megawatts in this -- in this
- 21 case. And on a day-ahead basis, the last forecast they had was
- 22 the profile that would have been used in the position in the --
- 23 in the sort of initial study wherever the initial profile came
- 24 from. On the day ahead they have real weather information, they
- 25 have real wind information. And in the profile we may have seen

- 1 that maybe a thousand megawatts was expected to be on, but it
- 2 turns out there's no wind, and maybe there's only a hundred
- 3 megawatts, so all of a sudden they're 900 megawatts short.
- 4 They're not in a position to go out in the market and -- and
- 5 command the price that they want to buy power; they have to take
- 6 what's out there. And so that's the -- you know, the genesis of
- 7 the 50 cents, in talking -- talking with the market or the --
- 8 you know, the dispatchers, the folks who -- who -- market
- 9 operators, this is their estimate of what it does cost to incur
- 10 those purchases or sales on that short notice.
- 11 Q. Mr. Duvall, the assumption that you are relying upon
- 12 based on this information, apparently from your traders, is that
- 13 every single time there is an increase in wind from the
- 14 projection, hour ahead or day ahead, there is a cost to the
- 15 Company in the form of transaction costs, correct?
- 16 A. Well, that's -- I guess, yeah, that's correct. And
- 17 a transaction cost of 50 cents is a pretty small transaction
- 18 cost in the context of a market price that might be, you know,
- 19 50 or \$60.
- 20 Q. And what you're assuming is that in every case where
- 21 there is this delta between the projection, day ahead or hour
- 22 ahead, and the actual wind, day ahead or hour ahead, that there
- 23 is a revised projection, I should say, because we're not
- 24 actually dealing with actualities now, we're dealing with two
- 25 different projections, right, on the inter-hour?

- 1 A. On the day ahead and the hour ahead?
- Q. Right. In other words, it's still a projection, but
- 3 it's --
- 4 A. Correct.
- 5 Q. -- the delta between those two projections that are
- 6 causing these costs you're talking about, correct?
- 7 A. That's correct.
- 8 Q. And your assumption is that every time that there
- 9 is, for example, an increase in wind projected hour ahead from
- 10 what was projected prior to that, that the Company will sell the
- 11 delta, that delta, the difference, will sell it on -- in the
- 12 hour-ahead market and incur transaction costs, correct?
- 13 A. Well, and it's -- on the day ahead it's based on the
- 14 size of the block, the 25-megawatt block. The hour ahead is
- 15 done on an hour-by-hour basis.
- 16 Q. I understand that. But in any event, without
- 17 worrying -- now, the 50 cents is just the day ahead, correct?
- 18 A. That is correct.
- 19 Q. And the hour ahead is 5 to 25 percent. And let me
- 20 ask about that. You have that in the study, but there's no
- 21 analysis or study to demonstrate in this record the 5 to
- 22 25 percent cost, it's again based on what your traders told you,
- 23 correctly -- correct?
- A. That's correct.
- 25 Q. Then let's go back then. So hour ahead, let's just

- 1 use that hour ahead. Your -- your projection for a certain wind
- 2 side has now gone up from what it was the hour before. Your
- 3 traders make the decision, we're going to sell that delta in the
- 4 hour-ahead market and incur a transaction cost, correct?
- 5 A. Well, that is -- that is correct. And part of that
- 6 is that in the -- in the power markets, the markets are not a
- 7 point price, they're a bid/ask spread. And this is picking up
- 8 the bid/ask spread.
- 9 Q. I understand that. But I just wanted you to stay
- 10 with me, because you're going to need to follow my line of
- 11 questions to understand my next one. So what -- what you would
- 12 assume for purposes of this analysis, this request that --
- 13 inter-hour wind integration charge, is that in that hour ahead,
- 14 if the -- if the forecast has now gone up, they're going to sell
- 15 the difference. What -- correct, right? Would that -- that's a
- 16 correct statement?
- 17 A. That is correct.
- Q. Every time there's -- every time there's a delta,
- 19 based on your study, there will be a sale with a transaction
- 20 cost?
- 21 A. In the day ahead, as long as it's 25 megawatts or
- 22 more.
- Q. Now, what if in that same hour, hour ahead, the
- 24 Company is actually selling into the balancing market based on
- 25 other resources within the same balancing area? Then is it not

- 1 an option of the Company, instead of selling to what the
- 2 transaction cost, to reduce a sale that otherwise it would have
- 3 had and save the transaction cost?
- 4 A. No. This was a point brought up by Mr. Higgins in
- 5 his surrebuttal testimony. Once we've made a sale we can't undo
- 6 it. And his suggestion is that we -- rather than make -- I
- 7 think it was make more purchases, we could reduce sales. And if
- 8 you've already made the sales, then you can't reduce them
- 9 without basically breaking contracts.
- 10 Q. Mr. Duvall, that was not Mr. Higgins' testimony, but
- 11 let me try and bear down. Stay with me, because I'm not talking
- 12 about a sale already made.
- 13 Your traders are looking at everything, their whole
- 14 panoply of resources as they make their -- their balancing
- 15 transaction decisions; are they not?
- 16 A. Yes, they are.
- 17 Q. So one hour ahead, when they now realize that wind
- 18 plant A has gone up, the projection has gone up -- I'm just
- 19 using a hypothetical -- they decide one hour ahead we've got 25
- 20 extra megawatts that we can sell in the next hour because the
- 21 projection has gone up. If at another resource, be it wind, be
- 22 it gas, be it any other resource in the same transmission
- 23 bubble, there is a resource where they have projected that they
- 24 would be selling excess. Based on that hour-ahead projection,
- 25 they can net the two and choose not to make that 25-megawatt

- 1 sale, thus saving transaction costs; can they not?
- 2 A. I presume in that hypothetical, if I followed it
- 3 all, I think the answer was yes, they could do that.
- 4 Q. Well, let's talk about it. How many hours a year
- 5 does -- is Rocky Mountain Power selling balancing transactions
- 6 into the market? Do you have any idea?
- 7 A. I would say probably close to every hour.
- 8 Q. So I was going to say I could get the information if
- 9 you want, but it's over 8,000 hours a year the Company is
- 10 actually selling balancing transactions into the market. Is it
- 11 a roughly the same for buying in the market? In other words,
- 12 isn't the Company almost every hour buying and selling into the
- 13 balancing market?
- 14 A. That's true.
- 15 Q. And if, per chance, one of those balancing sales
- 16 that you're making every hour is in the same transmission bubble
- 17 as the wind excess that you now are dealing with, you can net
- 18 the two and not make the sale and save 50 cents; can you not?
- 19 A. Like I said, in that hypothetical example, I suppose
- 20 the answer would be yes.
- 21 Q. It's hypothetical, but it's also reality that you're
- 22 buying and selling every hour, and the Company has not indulged
- 23 in any assumptions that there's even one hour during the year
- 24 when you have a difference between the projected -- the earlier
- 25 projection and the day-ahead or hour-ahead projection of wind,

- 1 you've made the presumption that not even in one hour can we
- 2 simply reduce a sale we'd other make -- otherwise make, or
- 3 increase a sale or increase a purchase we other -- we would
- 4 otherwise make if it's the other side, instead you've chosen to
- 5 make assumptions that in every hour you must sell and must buy
- 6 with the transaction cost, correct?
- 7 A. Correct.
- 8 Q. Don't you think that the Commission is entitled to
- 9 know and ratepayers are entitled to know before you charge this
- 10 that you've done a study to demonstrate that there isn't one
- 11 hour during the year that you're offsetting purchase or sales,
- 12 which by definition are losing money, transaction costs every
- 13 time, every hour, don't you think we're entitled to know whether
- 14 there might be even one hour in which that's true, or maybe
- 15 50 percent of the hours, in which case there's no transaction
- 16 cost, correct?
- 17 A. That's not correct.
- 18 Q. If 50 percent of the time you're able to -- to avoid
- 19 the transaction cost by simply reducing sales or increasing
- 20 purchases you would otherwise be making, and 50 percent of the
- 21 time you have to buy at that same transaction cost, it's going
- 22 to offset each other net to zero; is it not?
- A. Well, I said it was not because you're making up
- 24 assumptions about all of this sort of hypothetical situation.
- 25 Q. Well, I'm -- I'm forced to make it up because the

- 1 Company chose not to -- to study it; did it not?
- A. Well, the Company, as I mentioned before, I mean, we
- 3 had discussions with our dispatchers and -- to get the -- you
- 4 know, based on their experience, what the -- what the cost of
- 5 these transactions are. And in fact, in some instances there's
- 6 not a bid or not an ask in the market. You know, the markets,
- 7 especially on the day-ahead or the hour-ahead market, it's not
- 8 like going to the stock market. It's not as -- as liquid as
- 9 that.
- 10 Q. Mr. Duvall, you're answering a different question.
- 11 I'm with you now. I have accepted for purposes of my
- 12 hypothetical in this line of questions that there is a
- 13 transaction cost of 50 cents, or whatever it is, on the hour
- 14 ahead, I understand it's 5 to 25 percent of the cost. The
- 15 transaction cost your -- your traders told you to assume when
- 16 you have to buy or have to sell into a spot market, I'm
- 17 accepting those numbers, and saying there's an opportunity here
- 18 for the Company to save money by reducing those transaction
- 19 costs by offsetting sales and purchases if they're happening at
- 20 the same time within the same transmission area. And -- and
- 21 my -- and the point is, you didn't do that study to determine
- 22 whether there's any hours at all, maybe even 50 percent of the
- 23 hours, that would offset these transaction costs to zero. Isn't
- 24 that correct?
- 25 A. I -- I disagree with the premise of your question

- 1 where you keep saying there may be 50 percent of the hours that
- 2 fall in this category. I think the concept that's mentioned by
- 3 Mr. Dive is correct.
- Q. Okay, but did you study it, did you do any analysis
- 5 to determine how many hours you could offset transaction costs,
- 6 sales or purchases, rather than incurring them by buying and
- 7 selling because of wind variability?
- 8 A. No, we did not.
- 9 Q. And just to make sure we understand, in GRID or
- 10 in -- in this conceptual world we're dealing with with wind
- 11 integration cost, every hour that there's an above market -- I
- 12 mean a higher projection, so now one hour we have 25 megawatts
- 13 more than we projected, there's got to be another hour where
- 14 it's 25 below, correct? They have to offset each other in order
- 15 to equal the net energy, the total energy that's included in
- 16 this case. Is that not correct?
- 17 A. I don't think I followed that one.
- 18 Q. For -- in order to have the same net energy that
- 19 you're asking customers to pay for, total energy. I shouldn't
- 20 use the word net, net energy costs gets me... In order to
- 21 arrive at the number of megawatt-hours of energy that you're
- 22 asking the customers to pay for in the test period, every time
- 23 you assume that that energy goes up by 25 megawatts over the
- 24 projection, somewhere else there is the necessary assumption it
- 25 goes down by 25 megawatts to offset those in equal -- in total

- 1 energy hours that you've assumed in the case, correct?
- 2 A. I -- I still don't quite follow what you're -- I'm
- 3 not comfortable saying correct or incorrect.
- 4 Q. All right, I will leave that then. Let's turn --
- 5 and the whole discussion we've had is as to inter-hour cost,
- 6 this new category that has never been included. In contrast,
- 7 intra-hour costs, where you can't go to market, you have to use
- 8 your own resources to account for variances within the hour,
- 9 those have been included in rates at a fairly low level,
- 10 correct?
- 11 A. Yeah, the forecast error piece.
- 12 O. And now you've added regulating up and regulating
- 13 down within the hour, correct?
- 14 A. That's correct.
- 15 Q. Let's talk about -- and the way you've chosen to --
- 16 or the way you've -- the way the study -- the Company has
- 17 studied these costs, these intra-hour costs, is to determine an
- 18 additional amount of reserves that have to be held by the
- 19 Company in order to account for it, correct?
- 20 A. That's correct.
- 21 Q. Now. How many hours of wind -- or excuse me. How
- 22 many megawatts of wind were included in the last rate case? Do
- 23 you have any idea?
- A. I do not.
- 25 Q. In this case you've testified you have roughly

- 1 1,724 megawatt-hours -- megawatts of wind resources. Would it
- 2 be dramatically different than that in the 2009 test period we
- 3 used in the last rate case?
- 4 A. I'm sure it would be less than half of that.
- 5 Q. About half of that? Now, Mr. Ginsberg asked you a
- 6 question that I don't believe you fully answered, and that was
- 7 did the -- did the Company ever do a study to demonstrate that
- 8 in fact its reserves increased by the same proportion you're
- 9 proposing they will increase going forward in the test period to
- 10 account for the wind that was in the last test period?
- 11 A. Well, I -- if you're talking about actual reserves?
- 12 Q. Yes, actual reserves. Have you done an analysis to
- 13 show this Commission that actual reserves increased by the
- 14 amount you're -- you're trying to recover in this case? Or let
- 15 me put it back in that test period, to show that it -- it
- 16 actually increased by the level that your new study would say it
- 17 would have increased by?
- A. Well, no, it's -- what we -- our wind integration
- 19 costs are based on studies that we've provided to the
- 20 Commission.
- 21 Q. And so again, the answer is there was no study done
- 22 on actual reserves to show that they've increased because of
- 23 wind?
- 24 A. That's right.
- 25 Q. When -- when you regulate up, that means the wind's

- l gone down within the hour so you have to ramp up another gas
- 2 line, for example, correct?
- 3 A. Correct.
- 4 Q. You understand that Mr. Higgins agrees there are
- 5 costs there that are not covered in GRID and that the Company
- 6 should be allowed to recover?
- 7 A. Yes, I do.
- 8 Q. And his proposed recovery is \$3.02, which would be
- 9 roughly a 260-percent increase over what you're collecting in
- 10 rates today for those costs -- or for -- for intra-hour costs?
- 11 A. Yeah, his recommendation was \$3.02.
- 12 Q. Now let's talk about regulating down, because I
- 13 think that's where you and Mr. Higgins disagree on the
- 14 intra-hour part. When you regulate down, what's going on in the
- 15 real world is you've assumed -- and I'm going to make up numbers
- 16 here for a hypothetical -- a hundred megawatts of output from
- 17 this wind plant. During the hour it increased, the wind blows
- 18 harder, so you're now up to 125 megawatts that you didn't
- 19 expect. What's the result -- what's the reaction of the Company
- 20 going to be to that?
- 21 A. The reaction would be that we need to provide the
- 22 ramping services, we need to ramp something down to offset the
- 23 ramp up of the wind.
- Q. That does not require you to buy more reserves, does
- 25 it? Ramping down your gas plant to account for ramping up of a

- 1 wind plant during the hour does not require additional reserves,
- 2 does it?
- 3 A. Yes, it does.
- 4 O. How so?
- 5 A. If you look at the GRID model, we don't include the
- 6 ramping down in the GRID model. So if we have a gas plant
- 7 that's running in the GRID model in a particular hour when
- 8 ramping-down services are needed, that's in the GRID model at
- 9 full output, and under the wind integration study it's assumed
- 10 to be used to do ramping. You can't do double duty. You can
- 11 either provide the energy out of the gas plant or you can
- 12 provide the ramping services. And the lost energy from the
- 13 ramping down is not in the GRID study.
- 14 Q. I understand your answer, but that didn't say that
- 15 you buy extra reserves to deal with that. You're saying that
- 16 the -- you're saying you think there's a cost to ramping down
- 17 that's not included in GRID, correct?
- 18 A. That's correct. And we don't necessarily need to
- 19 buy extra reserves, we just need to redeploy plants from
- 20 providing power to the system and providing ramping reserves.
- 21 Q. And yet the way you've chosen to illustrate the cost
- 22 is to assume you do buy a reserve, that's the only evidence in
- 23 this record for ramping down as additional reserves are
- 24 theoretically purchased to cover this cost which you
- 25 acknowledged is not really buying reserves, correct?

- 1 A. No, it's that we -- we have modeled that additional
- 2 reserves are required to make -- to follow the ramping down. I
- 3 don't believe we show anywhere that we need to purchase
- 4 additional reserves.
- 5 Q. You're asking the ratepayers to pay for additional
- 6 reserves, but you're admitting you don't have to buy them. So
- 7 you're just using that as a proxy for the cost to the Company of
- 8 the ramping-down activities?
- 9 A. No. I -- I think we're -- we're maybe not
- 10 communicating on this. That -- that what we're saying is that
- 11 to provide the ramping-down services you need to hold some units
- 12 out that you can ramp down. And that's reserves.
- 13 Q. And yet you've acknowledged you don't buy the
- 14 reserves for ramping down.
- 15 A. Well, we would typically -- there's a cost to
- 16 holding reserves for ramping down, and it's a lost opportunity.
- 17 If you -- if you have to take a plant and ramp it down to follow
- 18 the wind coming up, you can no longer profit on that plant by
- 19 taking it to market, so it's a lost-opportunity cost.
- 20 Q. I accept that, that you think there's a lost
- 21 opportunity, but it isn't a reserve, you don't buy reserves for
- 22 it. You're using the cost of reserves as a proxy for that lost-
- 23 opportunity cost without demonstrating that the two are
- 24 correlated; are you not?
- 25 A. We can provide reserves for our own facilities. We

- 1 don't have to buy reserves.
- Q. Well, again, ramping down, you're not doing
- 3 reserves, you're ramping another unit down. And there may be
- 4 costs to that, but it's not purchasing reserves. Isn't that
- 5 correct?
- 6 A. I would disagree with that. It's a form of
- 7 reserves.
- 8 Q. It's a form of reserves, not one you buy though?
- 9 A. Well, we could buy it, but we don't typically buy
- 10 it.
- 11 Q. Because the system has enough flexibility within it
- 12 to accommodate it, correct?
- 13 A. Well, the -- the system -- we have enough of our own
- 14 resources that we can provide the reserves from. But if they're
- 15 providing reserves, then we've lost the opportunity to take them
- 16 to market, and that's the cost.
- 17 Q. Understand -- understandably. But the customers
- 18 have paid for that resource that is now providing the reserves.
- 19 We've already paid for the gas plants that allow you to back
- 20 down and follow wind.
- 21 A. Well, there's -- again, the -- it's already included
- 22 in GRID, and it's -- without providing the ramping service,
- 23 certainly you pay for the fuel, but you also get -- the
- 24 customers are also getting the opportunity value of having that
- 25 resource on the system.

- 1 Q. And nowhere in this record does there appear an
- 2 analysis of how one would calculate those lost-opportunity costs
- 3 of ramping down a resource rather than selling it into the
- 4 market, or whatever, all you've got is the reserve estimate,
- 5 correct?
- 6 A. We've provided in discovery the wind integration
- 7 model. It's an intra-hour model that deals with all of these --
- 8 these pieces that was provided to everybody through discovery.
- 9 Q. Let's move on, Mr. Duvall. If you'll look on
- 10 page 42 of your rebuttal, from lines 905 to 908 you were asked
- 11 whether there may be further refinements to your wind
- 12 integration analysis. You acknowledge there are some, but you
- 13 say they would all increase wind integration cost. You also
- 14 acknowledged there are some refinements that may well decrease
- 15 wind integration costs; do you not?
- 16 A. Yes, I do.
- Q. And, for example, in Appendix F, they are several
- 18 areas referenced in there; are there not? You acknowledge in
- 19 Appendix F that you will continue to refine it. You will want
- 20 to reference page 269. At the top of -- at the top of -- top of
- 21 page 269 you say that the analysis -- the wind integration cost
- 22 analysis will continue to be refined and expanded, correct?
- 23 A. That's what it says, yes.
- Q. And then if you turn to page 271, down at the very
- 25 bottom of that page, the next -- the last full sentence on that

- 1 page: While actual day-to-day balancing operations may require
- 2 less reserves than suggested in this study, attention to
- 3 televents is an important consideration for overall system
- 4 reliability. So you acknowledge that -- that what you're
- 5 projecting may not be the level of reserves you actually have to
- 6 carry in the system, correct?
- 7 A. Well, that -- that -- that sentence there has to do
- 8 with that you would require different levels of reserve at
- 9 different times, depending on the situation with your wind.
- 10 Q. And then on page 278 you -- does the Company not
- 11 identify, beginning on 278, tools, approaches, and other
- 12 opportunities to try and significantly reduce the forecast
- 13 error, lead to real-time enhancements in -- in forecasting that
- 14 would allow the wind integration charges to be lower?
- 15 A. Yes. And in fact, we have some very good wind
- 16 forecasting tools that we've developed in the Company already.
- 17 Q. This is still very much a work in progress within
- 18 the Company and within the IRP; is it not?
- 19 A. Well, I think it's within the Company, within the
- 20 IRP and within the industry. But I think the results speak for
- 21 themselves.
- MR. DODGE: Thank you. I have no further questions.
- 23 CHAIRMAN BOYER: Let's take a ten or 15-minute
- 24 recess and then we will hear from Mr. Reeder.
- 25 (A recess was taken, 10:30 a.m. to 10:48 a.m.)

- 1 CHAIRMAN BOYER: Mr. Reeder, your turn for
- 2 cross-examination.
- 3 MR. REEDER: Thank you.
- 4 CROSS-EXAMINATION
- 5 BY MR. REEDER:
- 6 Q. Good morning, Mr. Duvall.
- 7 A. Good morning, Mr. Reeder.
- 8 CHAIRMAN BOYER: Mr. Reeder, would you please bring
- 9 your mike closer to you so we can all hear and the reporter can
- 10 hear.
- 11 MR. REEDER: Thank you. All right, I'll try.
- 12 Q. Mr. Duvall, we're going to be talking about a couple
- 13 of your exhibits today, exhibits to your testimony. Our
- 14 references will be to the net power cost reports. Do you have
- 15 both of them available to you?
- 16 A. Would that be from my direct or rebuttal?
- 17 Q. Both, please.
- 18 A. Okay.
- 19 Q. All right. Let's start with the net power cost
- 20 report dated November of 2009. Is that the one attached to your
- 21 rebuttal testimony?
- 22 A. Yes, it is.
- Q. And that's the one that represents the most recent
- 24 cost service net power cost report that we have?
- 25 A. That's correct.

- Q. And that's the one that includes the updates we've
- 2 been discussing?
- 3 A. That's correct.
- 4 Q. Let's turn to the first page of that report and look
- 5 at the Special Sales for Resale.
- 6 MR. GINSBERG: Which exhibit number are you on?
- 7 MR. REEDER: We're on the GND 1R.
- 8 MR. GINSBERG: Okay.
- 9 MR. REEDER: Net Power Cost Report dated
- 10 November 2009.
- 11 Q. Do you see the Special Sales for Resale on the first
- 12 page of that exhibit?
- 13 A. I do.
- Q. Are they contracts between PacifiCorp and third
- 15 parties for the sale of power?
- 16 A. Yes, they are.
- 17 Q. And I see they're broken down between long-term
- 18 contracts and short-term contracts.
- 19 A. And system balancing sales.
- Q. What is a long-term contract, Mr. Duvall?
- 21 A. Well, I don't know that it has a particular
- 22 definition. These are -- these are usually more than one year
- 23 in length, and most of these have been around for a while.
- Q. And the short-term contracts are contracts of a year
- 25 or less?

- 1 A. Typically they are.
- Q. All right. And I see that there are several of them
- 3 that expire this year. In fact, in your testimony you testified
- 4 that you're losing some favorable contracts, didn't you?
- 5 A. Yes, I did.
- 6 Q. I can see that there are some of them that
- 7 deliveries apparently end December of 2009?
- 8 A. That's correct.
- 9 MR. REEDER: May I have marked as the next exhibit
- 10 in order a request. It is confidential, so don't talk about it
- 11 without your lawyer's permission.
- 12 CHAIRMAN BOYER: Should we mark this as UIEC Cross
- 13 1?
- MR. REEDER: Please.
- Q. Mr. Duvall, do you have in front of you a document
- 16 that's been marked for identification as UIEC Cross Exhibit 1?
- 17 A. I do.
- 18 Q. And can you identify that document?
- 19 A. It's the UIEC data request 9.1 dated November 18,
- 20 2009.
- 21 Q. What is the subject matter of that data request?
- 22 A. It's a request as to whether Rocky Mountain Power's
- 23 entered into a sales contract with NB Energy for the sale of
- 24 renewable power during the year 2010.
- 25 Q. And attached to the data request is a contract; is

- 1 that true?
- 2 A. Yes, it is.
- 3 Q. And that contract, for the record, is on yellow
- 4 paper, meaning we shall try to refer to it strictly in general
- 5 terms so as to avoid disclosure of confidential information.
- 6 But maybe you can help me, Mr. Duvall. What is
- 7 confidential in this document? What do we need to steer free
- 8 of?
- 9 A. I'm not exactly sure what parts of it are
- 10 confidential. I believe it probably talks about, obviously,
- 11 commercial prices for recs, I believe.
- 12 Q. Let's look at -- let's look at the contract itself.
- 13 And recognizing there may be confidential terms in there, let's
- 14 you and I try to talk in general terms. And, counsel, please
- 15 feel free to shut us down if we get too close to the edge.
- What is the date of this contract?
- 17 A. October 21st, 2009.
- 18 Q. Do you know how long this contract was in
- 19 preparation?
- A. I do not.
- Q. Did you know of this contract?
- A. Not specifically, no.
- 23 Q. This contract was entered into without your
- 24 knowledge?
- 25 A. I -- we have a group that is our commercial group

- 1 that would be the ones who do these.
- 2 Q. So when you prepared your November exhibit, this
- 3 October contract wasn't known to you?
- 4 A. I don't know if it was or not. I -- I don't recall
- 5 it, but given that it's October 21st, that's pretty late in the
- 6 game.
- 7 Q. We'd know because we're a bunch of lawyers involved,
- 8 it started much earlier than that though, wouldn't we?
- 9 A. I -- I don't understand the question.
- 10 Q. Do you have any idea how long it took to negotiate
- 11 this contract?
- MS. McDOWELL: Objection. He's already indicated he
- 13 wasn't aware of the contract.
- 14 Q. (By Mr. Reeder) The question, do you have any idea
- 15 how long it took to negotiate this contract?
- 16 A. No, I do not.
- 17 Q. Thank you. Let's look at the volume of the sale,
- 18 section 3, the amount of energy to be sold. Let me read what
- 19 the Nevada staff had to say about that; we know this won't be
- 20 confidential: The contract provides for a hundred megawatts of
- 21 power, 60,000 megawatt-hours to be sold in December of 2009, 727
- 22 megawatts to be sold in 2010. Is that the volume to be sold in
- 23 this contract, Mr. Duvall?
- A. Were you reading from the contract?
- 25 Q. I was actually reading from the Nevada Power order

- 1 on the contract so that it wasn't confidential.
- 2 A. What were those numbers again? I'm sorry.
- 3 Q. 60,000 megawatt-hours in December of 2009, 727,000
- 4 megawatt-hours in 2010.
- 5 A. That looks about right.
- Q. Turning to the price terms of the contract,
- 7 Mr. Duvall, section 4. Do you have that section in front of
- 8 you?
- 9 A. I do.
- 10 Q. Price terms of this contract, and here let's you and
- 11 I both be on general terms, because I suspect this is
- 12 confidential. The price is sold on an index; is it not?
- 13 A. It is.
- 14 Q. Plus an editor?
- 15 A. It is.
- Q. And the Commission has before them the index to
- 17 which this contract refers? They have the contract in front of
- 18 them, they can see which index you and I are not talking about?
- 19 A. That's correct.
- Q. All right. How can the Commission numerically
- 21 quantify that index so that it can determine the value
- 22 PacifiCorp will receive under this contract?
- 23 A. I really haven't thought about that.
- Q. Is this index an index whose results are routinely
- 25 published by, among others, Megawatt Daily, so it's readily

- 1 available information?
- 2 A. I'm -- I'm not familiar with exactly what the -- the
- 3 index publishes, whether it's historic or future; I'd have to
- 4 check on that.
- 5 Q. Okay. But the price in this contract refers to a
- 6 particular point in time price from a particular index; does it
- 7 not?
- 8 A. It's a particular point in time in the future, I
- 9 believe is the way I read it.
- 10 Q. Right. It refers to a point of delivery, price,
- 11 measured at a point in time on a particular index?
- 12 A. Correct.
- 13 Q. All right. So to the extent the Commission needs to
- 14 discover what that price is, they can go to a publication that
- 15 publishes that index's price for that point in time?
- 16 A. I -- I don't know that.
- 17 Q. Okay. Would you ask someone in your company during
- 18 the next break to determine whether or not this price that
- 19 you've put in the contract for the sale of power is a price that
- 20 someone can discover from a publication so that the receipts
- 21 might be audited by someone? Do we or do we not have a certain
- 22 price term?
- MS. McDOWELL: Objection. That is a completely
- 24 vague question. I couldn't follow it.
- 25 Q. (By Mr. Reeder) The question is precise. The

- 1 question is: Under the Uniform Commercial Code, if the price
- 2 can't be determined based on the contract, the contract's void.
- 3 If this price can be determined by the reference to a third-
- 4 party index, then it's not void. Is this an enforceable
- 5 contract or not?
- 6 MS. McDOWELL: Objection. That's a legal
- 7 conclusion.
- 8 CHAIRMAN BOYER: I'm going to sustain that
- 9 objection. I think the question is -- is could we, if we chose
- 10 to look to a published index to find out what these costs are at
- 11 a given point in time. And I think Mr. Reeder is asking if you
- 12 would check with people from the Company during the next break
- 13 to find out if that is or is not the fact. Did I restate your
- 14 question --
- MR. REEDER: Correct, you're correct.
- 16 CHAIRMAN BOYER: Is that okay with you, Mr. Duvall?
- 17 THE WITNESS: I can do that.
- 18 CHAIRMAN BOYER: Thank you.
- 19 Q. (By Mr. Reeder) And the second part of the price in
- 20 this contract is stated in dollar terms. We shouldn't have too
- 21 much difficulty discovering that, should we, Mr. Duvall?
- 22 A. I'm sorry, I was writing.
- Q. Fine, go ahead, finish writing, then I'll ask the
- 24 question.
- A. Go ahead.

- 1 Q. The second part of the price is stated in dollar
- 2 terms. We shouldn't have much difficulty discovering that
- 3 price, should we?
- 4 A. No.
- 5 Q. All right. Now, turning to the last page of the
- 6 contract, the contract references the sourcing of the resources
- 7 for this contract. Again, it's confidential, so let's just --
- 8 in general terms. Sources the resourcing of this contract,
- 9 doesn't it?
- 10 A. It's not -- I -- I don't know. It's not what the
- 11 words say.
- 12 Q. Okay. Let's go back and look at the contract,
- 13 section 3.
- MS. McDOWELL: I'm just going to object to this
- 15 question, this whole line of questions, because Mr. Duvall has
- 16 testified he was not -- he's not familiar with this contract, he
- 17 was not involved in the drafting of this contract, he was not
- 18 aware of the contract at the time he provided his rebuttal
- 19 testimony. And there's a continuing line of questions here
- 20 about what the documents says. The document speaks for itself.
- 21 And this witness is not familiar with the document in order to
- 22 be able to provide any additional insight. So I think the whole
- 23 line of questioning is without foundation, and objection.
- 24 CHAIRMAN BOYER: Well, the document does speak for
- 25 itself, but somehow the words have to find their way into the

- 1 record, and I think Mr. Reeder is using Mr. Duvall as the
- 2 messenger on that. You may proceed, Mr. Reeder.
- 3 Q. (By Mr. Reeder) Mr. Duvall, would you turn to
- 4 section 3 of the contract. Does this contract spell out that
- 5 this contract is to be 98 percent renewable?
- A. Yes, it does.
- 7 Q. And are the resources listed in Appendix A renewable
- 8 resources that one might expect PacifiCorp to service this
- 9 contract from?
- 10 A. Yes.
- 11 Q. Are the costs associated with providing service
- 12 under this contract except -- and I have to apologize here, I'm
- 13 not schooled in wind integration costs. Are the costs for
- 14 providing service under this contract, except possibly the wind
- 15 integration costs, already included in GRID?
- 16 A. No. I mean, if the contract's not included in GRID,
- 17 then the cost of providing service in the contract is not
- 18 included in GRID.
- 19 Q. So what would be the cost of providing service under
- 20 this contract then, Mr. Duvall, if this is renewable?
- 21 A. Well, this is a -- this is a sales contract, so I'm
- 22 not sure that we would track exactly what the costs are
- 23 associated with providing the service.
- Q. What would you expect the production cost for wind
- 25 to be?

- 1 A. The production costs of wind are -- are typically --
- 2 I mean, they have no fuel cost, so it's zero plus whatever
- 3 integration costs are.
- 4 Q. And what would you expect the production costs for
- 5 the hydro to be?
- 6 A. For the hydro, is that in that list as well?
- 7 O. Yes.
- 8 A. I don't know. It would typically be zero, or with
- 9 some -- some kind of variable O&M costs associated with it.
- 10 Q. Are the capital costs associated with the plants
- 11 that would provide this service included in your revenue
- 12 requirement?
- 13 A. They appear to be all resources that would be in the
- 14 revenue requirement.
- 15 Q. Let's pass that topic and go to another one,
- 16 Mr. Duvall. Let's go back to your direct testimony, if we might
- 17 for a moment. Looking at page 11 of 17, and we're now into the
- 18 net power cost report dated June of 2010, says the print date on
- 19 my version. Have you got that document?
- 20 A. I do. Eleven of 17?
- 21 Q. Yes, sir.
- 22 A. Yes, I do.
- Q. Looking at the bottom of page 11 of 17, I see the
- 24 average fuel costs per anum BTU?
- 25 A. That's correct.

- 1 Q. And the prices stated there are the prices that you
- 2 would forecast? Recognizing we've got dueling models on
- 3 forecasting prices, is this the prices you would forecast you
- 4 would pay for fuel for these units?
- 5 A. That's correct.
- 6 Q. Are these the burner tip price or are these the
- 7 wellhead price? Are these -- do they include transmission or
- 8 exclude transmission?
- 9 A. Well, in the -- it would be at the plant, I believe.
- 10 Q. So these include transmission?
- 11 A. I think for the most part. I'm thinking that the
- 12 transmission or the -- for Chehalis, I don't recall whether it's
- 13 separate or not.
- Q. So the actual gas costs that you face would be this,
- 15 less whatever you pay for transportation?
- 16 A. Yeah.
- 17 Q. All right. Referring back to page 5 of 17 of that
- 18 exhibit. And again, we're referring to the June 2010 hour cost
- 19 study.
- 20 A. Okay.
- 21 Q. The total gas burn cost there, \$275 million, is that
- 22 the extension of the prices we were looking at just a moment
- 23 ago?
- 24 A. So it's 272,000 -- 272 million?
- Q. Yes. I'm sorry.

- 1 A. Yeah. Yes, it is.
- Q. All right. Looking down below it, I see a line
- 3 entitled Gas Swaps.
- 4 A. Correct.
- 5 Q. 174 million?
- 6 A. Correct.
- 7 Q. What are gas swaps?
- 8 A. What is a gas swap?
- 9 Q. What is a gas swap?
- 10 A. A gas swap is a financial instrument that is used
- 11 to -- in hedging.
- 12 Q. In what way do you use it in hedging?
- 13 A. We would typically use it to fix the price.
- 14 Q. You bought a financial instrument to fix the price?
- 15 A. Yes.
- Q. And you made a payment of \$174 million on those
- 17 financial instruments in this -- in this report?
- 18 A. We -- many of these swaps -- and we've talked about
- 19 this elsewhere -- we have gas swaps and we have electric swaps.
- 20 And as I recall in this case, the electric swaps were in the
- 21 \$180 million range as a credit to that power cost, so netted
- 22 together --
- Q. Wait a minute. You're -- you're netting what you
- 24 earned selling forward favorably against what you lost buying,
- 25 as a buyer, unfavorably? Give us a break.

- 1 Let's stick with the gas costs a minute. Did you
- 2 pay someone \$174 million because of a financial instrument
- 3 involved in the purchase of natural gas swaps?
- 4 A. We -- we incurred that cost on gas swaps and we
- 5 incurred a slightly larger benefit on electric swaps.
- 6 Q. Let's just stick with gas swaps, if we might. This
- 7 is a forecast -- to be fair, this is a forecast of what your
- 8 forecasted loss was on the financial instruments that you bought
- 9 in June of 2010. This is just a forecast. This is one of those
- 10 dueling model problems again?
- 11 A. Well, it's -- it's impossible to separate the gas
- 12 swaps and the electric swaps.
- Q. Okay. Let's try it for a minute. Let's just look
- 14 at this line. Did you pay someone or forecast you would pay
- 15 someone \$174 million?
- MS. McDOWELL: This has been asked and answered now
- 17 two or three times.
- 18 CHAIRMAN BOYER: We do now have a very direct and
- 19 straightforward question. Go ahead and answer it, Mr. Duvall.
- 20 THE WITNESS: I'm sorry, what was the question?
- 21 Q. (By Mr. Reeder) Did you forecast on June 10,
- 22 2000 -- did you forecast on -- in June of this year that you
- 23 would pay someone \$174 million for gas swaps?
- 24 A. Those were the gas swaps that were in place at the
- 25 time that we prepared the study.

- 1 Q. And from whom did you buy these gas swaps?
- 2 A. I don't actually know the names of the
- 3 counterparties, but they're counterparties in the market.
- Q. Can you give us some examples of the persons you buy
- 5 gas swaps from?
- 6 A. Well, they're -- they would be -- I -- I -- don't
- 7 have any examples of any particular entities.
- 8 Q. Would Goldman Sachs be someone that sold you these
- 9 gas swaps?
- 10 A. They could be.
- 11 Q. Would Morgan Stanley be someone that sold you these
- 12 gas swaps?
- 13 A. They could be.
- Q. Would you expect the sellers to be those kind of
- 15 financial institutions?
- 16 A. I think generally that's probably -- probably
- 17 correct.
- 18 Q. All right. Let's go forward to the next study,
- 19 because the numbers change a bit on us. We've updated a bit.
- 20 Going forward to the November study, let's look at the same
- 21 pages and ask the same questions, if we might, for a minute.
- 22 In -- on page 11, we here have the prices you expect to pay,
- 23 including transportation for delivery to your gas units,
- 24 updating them through November?
- 25 A. On page 11?

- 1 Q. Yes, please.
- 2 A. Yes.
- Q. Okay. And if we compare the prices on page 11 of
- 4 the November document with the pages on -- with the prices on
- 5 page 11 of the earlier document, we see you forecasted some
- 6 changes in the gas prices, don't we?
- 7 A. We see what? I'm sorry.
- 8 Q. That you have changed the forecast for some of the
- 9 unit prices for gas. I'm sorry.
- 10 A. That's correct.
- 11 Q. Now, if we drill precisely to it, we'll see the
- 12 prices for Currant Creek and Lake Side have gone up, don't we?
- 13 A. So the Currant Creek is at four --
- Q. Up to four -- 4.24 from 3.95, each rounded. And I'm
- 15 sorry, I can only remember three digits.
- 16 A. I lost my place on the --
- 17 Q. Comparing page 11 with page 11. Sorry.
- 18 A. That's correct.
- 19 Q. All right. Now, if we look further back in the
- 20 exhibit, we can see the same kind of analysis that we saw in the
- 21 earlier exhibit. I think the page reference is page 5.
- 22 A. Right.
- Q. And we can see that your gas costs have now
- 24 increased to \$275 million from the \$272 million we had in the
- 25 earlier exhibit?

- 1 A. Correct.
- 2 Q. And your gas swaps have correspondingly come down?
- 3 A. Correct.
- 4 Q. All right. When you choose to fix the price of
- 5 natural gas by buying gas swaps, are you familiar with the kinds
- 6 and types of vehicles that the Company uses to determine whether
- 7 or not that is the most efficient way to protect itself?
- 8 A. I'm not really the expert in the gas hedging area.
- 9 Q. Do you know whether or not the Company considers
- 10 options as opposed to financial index for fixed swaps?
- 11 A. I believe that the Company has considered options in
- 12 the past. As we've brought options before commissions, in
- 13 particular the Utah commission, they have been -- on the
- 14 electric side they've been challenged pretty heavily by some of
- 15 the intervenors. So that has certainly weighed on our decisions
- 16 as to whether options are something that fit into a regulatory
- 17 environment.
- 18 Q. And are you aware of any study done by PacifiCorp to
- 19 evaluate the difference in costs to ratepayers, and the
- 20 difference in cost to the Company, to be fair, a strategy that
- 21 is option heavy versus swap heavy?
- 22 A. I'm not personally aware of those.
- 23 MR. REEDER: Let's have marked as the next exhibit
- 24 in order pages from your 10(k).
- 25 CHAIRMAN BOYER: That will be UIEC Cross Exhibit 2.

- 1 MR. REEDER: I have the entire 10(k) if you'd like
- 2 to see the whole thing. I just copied some pages.
- Q. Mr. Duvall, do you have before you a document that
- 4 has been marked for identification as UIEC Cross Exhibit 2?
- 5 A. Yes, I do.
- 6 Q. Can you identify that document?
- 7 A. It's from the form 10(k) for the fiscal year ended
- 8 December 31st, 2008. There appear to be two pages; one looks
- 9 like a cover page and one looks like page 11 of the document.
- 10 Q. All right. And do you see there a subject, a
- 11 paragraph entitled Natural Gas?
- 12 A. On page 11, yes.
- 13 Q. All right. Directing your attention to that, does
- 14 that describe the Company's natural gas hedging policy?
- 15 A. It talks about, at very, very high level, how
- 16 PacifiCorp manages its natural gas supply requirements by
- 17 entering into forward commitments for physical delivery of
- 18 natural gas, in managing exposures, increasing natural gas
- 19 through forward commitments for the purchase of forecasted
- 20 natural gas requirements, fixed price and financial swap
- 21 contracts that settle in cash based on the difference between
- 22 fixed price and floating price. So it's -- it's pretty high
- 23 level.
- 24 O. Let's look at the last sentence under the Natural
- 25 Gas paragraphs as of December 31. Is that fair, that sentence?

- 1 A. Yes.
- 2 Q. Can you read that for me?
- A. As of December 31, 2008, PacifiCorp has economically
- 4 hedged 64 percent of its forecast physical exposure and
- 5 94 percent of its forecast financial exposure for 2009. For
- 6 2010, PacifiCorp currently has hedged 48 percent of its forecast
- 7 physical exposure, 85 percent of its forecast financial
- 8 exposure.
- 9 Q. Now, if the process is so high level, can you help
- 10 me understand it? Does that mean that 98 percent of your
- 11 natural gas exposure is covered by hedges for the period 2009?
- 12 A. Well, this says the -- it says economically hedged
- 13 as of December 31st. So whatever our position was on
- 14 December 31st, we were financially hedged to those levels. And
- 15 financially hedged means that we use delta options. These are
- 16 not -- these are not binary hedging, these are economic hedging.
- 17 So that that's -- that's -- those measures are -- will change
- 18 day to day. So as of December 31st that was our position. As
- 19 of, you know, early January 2009, things will have changed if
- 20 gas prices change, spark spreads on gas plants change, our
- 21 position changes, our load change. So that was the situation
- 22 for economically hedged as of December 31st, 2008.
- Q. Let's talk about the financial exposure from this --
- 24 this is the \$174 million or \$164 million check we're writing,
- 25 94 percent of its financial exposure was hedged as of December

- 1 31, 2009?
- 2 A. It says what it says.
- Q. Do you change those positions from time to time? Do
- 4 you eliminate positions or put on new positions?
- 5 A. Well, the position changes on us, and so we manage
- 6 that position.
- 7 Q. The financial position changes on you or the
- 8 economic position changes on you?
- 9 A. All of it.
- 10 Q. Physical price changes. Does the hedge price
- 11 change?
- 12 A. The hedge price would change.
- Q. As you bought new hedges, or do you sell the hedges?
- 14 A. Well, on swaps I believe we would typically be a
- 15 buyer as well.
- Q. Now, let's look at the next -- I'm sorry. Did you
- 17 finish your answer?
- 18 A. I'm sorry. I think with swaps we would typically be
- 19 the fixed-price side of the swap.
- 20 Q. The buyer. Looking at 2010, 48 percent of your gas
- 21 is physically hedged?
- 22 A. That's what it says, yeah.
- Q. And 85 percent of your -- of your position for 2010
- 24 is financially hedged?
- 25 A. That's right.

- 1 Q. How far out do you hedge?
- 2 A. I believe we have provided hedging policies to -- in
- 3 discovery. These are all confidential, so I'm not sure --
- 4 Q. Would it be fair to say that you hedge out for a
- 5 number of years?
- 6 A. We -- we hedge for multiple years.
- 7 O. More than two?
- 8 A. More than two, correct.
- 9 Q. Have you come to this Commission and asked them for
- 10 approval of your gas hedging policy and demonstrated to them how
- 11 this gas hedging policy benefits the ratepayers?
- MS. McDOWELL: I just want to object. I have been
- 13 waiting and waiting for this line of questioning to be tied to
- 14 something that's actually in a piece of prefiled testimony filed
- 15 by this witness or another company witness or by Mr. Reeder's
- 16 witness, and I have yet to hear anything that ties this to an
- 17 issue that Mr. Reeder has raised or that the Company has raised.
- 18 The Commission's rules preclude a party from establishing their
- 19 cases through cross-examination, and that appears what -- to be
- 20 what Mr. Reeder is doing. So I just want to object to that. I
- 21 don't think it's proper.
- MR. REEDER: If you read the direct testimony of
- 23 Morris Brubaker you'll see we raised these very issues. We
- 24 asked the Commission to consider hedging as an alternative and
- 25 challenged whether this provided the lowest cost gas resource to

- 1 the ratepayers. Your witness has testified that he's paying
- 2 \$164 million to Morgan Stanley and Goldman Sachs. That's one of
- 3 the more relevant prices we've heard this morning.
- 4 CHAIRMAN BOYER: Mr. Duvall has also testified that
- 5 he's not a hedging expert. So I guess we'll let you proceed,
- 6 Mr. Reeder, but to the extent you don't know, Mr. Duvall, you
- 7 can say, "I don't know."
- 8 Q. (By Mr. Reeder) You got the last question?
- 9 A. What was the last question again? I'm sorry.
- 10 Q. Have you come to this Commission and asked for this
- 11 commission to approve the hedging policy of this company, this
- 12 multiyear hedging policy, not knowing how far out it extends, by
- 13 demonstrating to them that it provides the lowest cost in
- 14 natural gas to the ratepayers?
- 15 A. Well, there is a docket open with the Commission on
- 16 natural gas hedging. We also have the ECAM docket open with
- 17 this Commission. And frankly, I don't know whether the
- 18 Commission is interested in approving a hedging policy. I don't
- 19 think that issue has ever been raised with the Commission by
- 20 anyone. But it would, I think, fall in a category of some kind
- 21 of preapproval, which I'm not sure is -- at least with my
- 22 experience, is what the Commission likes to do.
- Q. In a financial swap, Mr. Duvall, how, when your load
- 24 is financially secure to 94 percent, is the ratepayer assured of
- 25 the lowest cost of natural gas?

- 1 A. Well, the hedging policy is not meant to produce the
- 2 lowest cost, it's meant to mitigate the risk.
- 3 MR. REEDER: I have nothing further. Thank you.
- 4 CHAIRMAN BOYER: Thank you, Mr. Reeder.
- 5 Commissioner Allen?
- 6 COMMISSIONER ALLEN: Thank you, Mr. Chairman. In
- 7 reading the prefiled testimony in the previous cases in this one
- 8 also, I come across the analytical tool, the forward price curve
- 9 that you use. And I'm just curious. I don't know that I
- 10 completely understand what goes into the forward price curve.
- 11 Can you enlighten me on that, Mr. Duvall?
- 12 A. Certainly. And in the context of our test periods,
- 13 we have -- we have two pieces of our forward price curve. The
- 14 second piece doesn't kick in until after 17 months, so I'll just
- 15 focus on what we do for the near term or what would be used in
- 16 rates. And that is that, obviously, every day our traders are
- 17 updating their forward price curve, but once a quarter those
- 18 price curves are validated through our risk-management
- 19 department, who go out independently and get broker quotes from
- 20 brokers and on the -- entered on the last day of each quarter.
- 21 So it would be the, you know, March, June, September and
- 22 December this -- this validation process would take place. And
- 23 the -- the forward price curves that our traders develop are
- 24 then -- as they're validated, they have to be within five
- 25 percent of broker quotes. And then the final official forward

- 1 price curve is locked down and made public for use in regulatory
- 2 proceedings.
- 3 COMMISSIONER ALLEN: And when those forward price
- 4 quotes are being created, do they just include natural gas
- 5 costs, are they -- do they reflect your hedging policies? What
- 6 goes into that? Or is it -- is it one of those perfect market
- 7 scenarios where all the data is then known?
- 8 A. It's -- it's just market prices. It's what -- what
- 9 the -- you know, what the price is both in electric and in gas
- 10 markets.
- 11 COMMISSIONER ALLEN: Oh, okay, great. So then I
- 12 could assume that then any hedging strategies that you have that
- 13 are available as far as information goes will be built into
- 14 those calculations, they know what the upper and lower limits
- 15 are?
- 16 A. Well, they know what the forward price is at the --
- 17 at the time that they would enter into any kind of hedging.
- 18 COMMISSIONER ALLEN: Okay, great. Thank you.
- 19 CHAIRMAN BOYER: Mr. Campbell?
- 20 COMMISSIONER CAMPBELL: I just have a few questions
- 21 related to the integration cost sheet that you provided us
- 22 today. First of all, can you -- can you explain what the
- 23 difference is between your BPA price and OCS's price? It looks
- 24 like there's quite a bit of difference. Where is the difference
- 25 between them there?

- 1 A. Well, it's probably not a difference of opinion,
- 2 it's a difference in timing. Bonneville filed a rate case, and
- 3 in that rate case they asked for a wind integration charge of
- 4 \$2.72 per kilowatt month, which translates into the \$12.42 per
- 5 megawatt-hour at the 30-percent capacity factor. So that was
- 6 their original proposal. In their final record of decision they
- 7 landed on \$1.29 per kilowatt month and converted to dollars per
- 8 megawatt-hour. That's the five eighty.
- 9 COMMISSIONER CAMPBELL: And I guess the second
- 10 question related to this exhibit is still do you believe that
- 11 Bonneville -- I guess could you just make the comparison of
- 12 Bonneville with their set of resources vs. PacifiCorp with your
- 13 set of resources, would you expect one to have higher
- 14 integration costs than another?
- 15 A. Well, Bonneville is mainly hydro. They have
- 16 somewhere in the range of 18,000 megawatts of hydroelectric
- 17 facilities, mainly on the Columbia River. So I think there --
- 18 and as compared to PacifiCorp, that has somewhere around what, 9
- 19 or 10 percent hydro facilities across the system, and a
- 20 couple -- or a few natural gas plants that we can use. So I
- 21 would -- I would think that they're relatively comparable.
- Now, one of the -- in the -- I think it was
- 23 Mr. Ginsberg mentioned some comments that had come in on the --
- 24 on the wind integration study and the IRP forums, and we
- 25 received comments from both the CUB and the Northwest Renewable

- 1 Project, which is a renewable group in the Northwest, that
- 2 suggested that the Bonneville market -- or the Bonneville price,
- 3 their tariff price be used as the market price for rate making.
- $4\,$ So they -- they seemed to think that that was a reasonable
- 5 market price for use with PacifiCorp.
- 6 COMMISSIONER CAMPBELL: I guess my final question on
- 7 this integration issue is do integration costs change with the
- 8 larger amount of renewables on a system? I mean, is it -- is
- 9 the ratio one for one, or as you increase the amount of
- 10 renewables, would that to a larger extent or a lesser extent
- 11 change your integration cost?
- 12 A. Well, I think the general view of folks is that it
- 13 increases them. And I think if you look back at your avoided
- 14 cost docket that was a few years ago, there was -- a few years
- 15 ago there was some -- there was actually for avoided cost you'd
- 16 set the integrated costs at \$3. And that was looking at some
- 17 numbers that were \$2 to \$4. And the \$2 was for a lower
- 18 penetration, the \$4 was for a higher penetration. Those were
- 19 sponsored by the Division in that case.
- 20 CHAIRMAN BOYER: Just a question or two, Mr. Duvall,
- 21 on -- this regards cross-examination by Mr. Proctor, when he was
- 22 talking about intra-hour integration costs and regulating down.
- 23 And during the course of that discussion with Mr. Proctor you
- 24 testified that the Company can provide ramping services in-house
- 25 to cover those costs, I guess they're shortfalls, and that they

- 1 in turn are in the form of reserves. My question is, is that
- 2 true also at hours of peak demand? Does the Company have in
- 3 Utah or systemwide sufficient reserves to cover that?
- 4 A. Well, and I guess what I -- not without purchasing
- 5 some. But we would set ourselves up for that. And my point
- 6 there was that we don't need to buy reserves; we can purchase
- 7 power to replace the power and then hold back our generators to
- 8 provide the reserves.
- 9 CHAIRMAN BOYER: Okay. Thank you, Mr. Duvall.
- 10 Before we return to redirect, Mr. Reeder, do you wish to offer
- 11 into evidence UIEC Cross Exhibits 1 and 2?
- MR. REEDER: If I may, I offer them.
- 13 CHAIRMAN BOYER: Are there any objections to the
- 14 admission of these exhibits? If not, they are admitted.
- Ms. McDowell, redirect?
- MS. McDOWELL: Thank you, Chairman Boyer.
- 17 REDIRECT EXAMINATION
- 18 BY MS. McDOWELL:
- 19 Q. Mr. Duvall, are you familiar -- I want to ask you
- 20 some questions to follow up on some of the questions you've been
- 21 asked on wind integration. So again, are you familiar with the
- 22 Commission's decision in the 2007 case on wind integration
- 23 charges?
- 24 A. Yes, I am.
- 25 Q. And do you recall that the Commission basically said

- 1 that it recognized that the Company had limited experience in
- 2 forecasting wind integration charges, especially as wind
- 3 penetration levels increased, so it would accept the Company's
- 4 wind integration charges in that case which are based on
- 5 planning assumptions consistent with a portfolio view? Do you
- 6 recall that portion of the Commission's order?
- 7 A. Yes, I do.
- 8 Q. Now, in this case is the Company's wind integration
- 9 study also based on planning assumptions consistent with a
- 10 portfolio view?
- 11 A. Yes, it is.
- 12 Q. Now, because wind integration charge forecasting is
- 13 relatively new, is it normal practice for utilities to look at
- 14 each other's studies and compare and contrast and validate their
- 15 studies by reviewing other utility studies?
- 16 A. Yes, it is.
- 17 Q. In the case of your balancing charge which Mr. Dodge
- 18 asked you about, did you validate that charge by reviewing
- 19 studies of other utilities?
- 20 A. Yes, in part. And that was -- I think he read that
- 21 out of the appendix where -- that the -- Portland General uses
- 22 the 50 cents for the day-ahead and the -- they use 20 percent
- 23 for the hour-ahead balancing.
- 24 Q. And that is as compared to 50 cents for the one
- 25 charge in your study, and then what is your percentage, is it 5

- 1 to 25 percent?
- 2 A. Five to 25.
- 3 Q. So would you say those are similar in range?
- 4 A. Absolutely.
- 5 Q. Now, in setting that charge, do your traders take --
- 6 I assume it's an average cost that they have estimated for you?
- 7 A. Yes, it is.
- 8 Q. So average would contemplate the fact that sometimes
- 9 it could be more, sometimes it could be less?
- 10 A. That's correct.
- 11 Q. Now, as a -- as a percentage of your wind
- 12 integration, your total wind integration charge proposed in this
- 13 case, what is that? What would you estimate the balancing
- 14 charge to be?
- 15 A. Well, the day ahead I believe came out to 32 cents
- 16 out of \$6.62, so that's a very small percentage. And overall
- 17 the total was the dollar -- \$1.79 out of the \$6.62. I haven't
- 18 computed those percents, but that's...
- 19 Q. So is your -- your current position on intra-hour
- 20 cost is \$1.79 for those costs; is that right?
- 21 A. Inter-hour, yes.
- Q. And you're saying that only a portion of that is
- 23 related to this balancing cost issue?
- A. A portion of it's related to day ahead and a portion
- 25 of it's related to hour ahead.

- 1 Q. So now on the BPA charge, following up on the
- 2 questions that you were asked about the comparability of that
- 3 charge, the BPA charge is an intra-hour charge; is that correct?
- 4 A. That's correct.
- 5 Q. And did you look to that charge to validate -- that
- 6 five eighty-nine charge to validate the Company's position of
- 7 four eighty-three?
- 8 A. Yes, I did.
- 9 Q. And why -- why do you think that the BPA charge is
- 10 actually higher than the Company's charge?
- 11 A. Well, I don't -- I don't really know exactly why
- 12 it's higher, but it certainly was initially proposed to be twice
- 13 as big as that, and obviously went through a lot of public
- 14 scrutiny in the BPA rate case, where they finally landed on
- 15 the -- on the five eighty-nine, or the \$1.29 per kilowatt month.
- Q. Now, the UAE position in this case is to disallow
- 17 all inter-hour costs, correct?
- 18 A. That's correct.
- 19 Q. Not just costs related to this balancing charge?
- 20 A. That's correct.
- 21 Q. And the -- have you reviewed the UAE's positions in
- 22 the last two cases to compare its position in this case with
- 23 respect to the wind integration charges?
- A. I... Oh, it's turned up.
- 25 CHAIRMAN BOYER: If you could stand back a bit and

- 1 if Ms. McDowell could stand a little bit closer, we'd be in
- 2 great shape.
- 3 MS. McDOWELL: All right.
- 4 CHAIRMAN BOYER: Thank you.
- 5 MS. McDOWELL: Thank you.
- 6 A. I -- I don't recall what UAE's position was on the
- 7 last two cases, but we didn't have -- the inter-hour costs were
- 8 not an issue.
- 9 MS. McDOWELL: Okay. That's all I have. Thank you
- 10 very much.
- 11 CHAIRMAN BOYER: Okay. Thank you, Mr. Duvall. You
- 12 may be excused.
- 13 THE WITNESS: Thank you.
- 14 CHAIRMAN BOYER: We'll turn now to the Division
- 15 witnesses. Mr. Evans will be your first witness, Mr. Ginsberg?
- MR. GINSBERG: Yes.
- 17 CHAIRMAN BOYER: Mr. Evans, you haven't been sworn
- 18 in this proceeding, I don't believe, have you?
- 19 THE WITNESS: No, I have not.
- GEORGE W. EVANS,
- 21 being first duly sworn, was examined and testified as follows:
- 22 CHAIRMAN BOYER: Thank you. Please be seated.
- 23 Mr. Ginsberg.
- 24 //
- 25 //

- 1 EXAMINATION
- 2 BY MR. GINSBERG:
- 3 Q. Would you go ahead and state your name for the
- 4 record.
- 5 A. My name is George W. Evans, E-v-a-n-s.
- Q. And you have filed testimony in this proceeding;
- 7 have you not?
- 8 A. Yes, I have.
- 9 Q. What's been marked as DPU Exhibit 6.0 was your
- 10 direct testimony with attached exhibits that have been
- 11 identified on our exhibit list?
- 12 A. Yes.
- 13 Q. Do you have any corrections to make in your direct
- 14 testimony?
- 15 A. Yes, I do.
- 16 Q. Okay.
- 17 A. I have one small correction to make. On page 11,
- 18 line 171, the word "two" should be replaced with the word "one,"
- 19 and the word "years" should be made singular.
- 20 Q. And you filled then some supplemental direct
- 21 testimony, 6.0 SD with no exhibits; is that correct?
- 22 A. That's correct.
- Q. And any corrections in that one?
- 24 A. No.
- 25 Q. And then finally, you filed some surrebuttal

- 1 testimony, Exhibit 6.0 SR with a number of attached exhibits?
- 2 A. Yes.
- 3 Q. And any corrections to make in that?
- 4 A. No.
- 5 Q. And part of your exhibit in your direct testimony
- 6 was confidential; is that correct?
- 7 A. Several exhibits were confidential, yes.
- 8 Q. Okay. And so if those questions were asked to you
- 9 today, that's the testimony that you would give to the
- 10 Commission?
- 11 A. Yes.
- MR. GINSBERG: Okay. With that, I'd ask to have
- 13 admitted the exhibits as identified.
- 14 CHAIRMAN BOYER: Are there any objections to the
- 15 admission of Mr. Evans's direct, supplemental direct, and
- 16 surrebuttal testimony? Seeing none, they are admitted.
- Q. (By Mr. Ginsberg) And do you have a summary of your
- 18 testimony?
- 19 A. Yes, I do. In my -- in my testimony I present five
- 20 recommended modifications to the Company's filed net power
- 21 costs. The first is a reduction of .3 million dollars for
- 22 planned outages on coal units. The next was a \$1 million
- 23 reduction for the heat rate for the plant Wyodak. I also
- 24 recommend a reduction of wind integration costs, a reduction of
- 25 \$2.1 million for startup energy, a reduction of \$2.6 million for

- 1 coal costs.
- I also discuss certain new additions to net power
- 3 costs that Mr. Duvall made in his rebuttal testimony. My
- 4 reduction for planned outage -- planned outages on coal units of
- 5 .3 million dollars is based on a revision to the Company's
- 6 normalized planned outage schedule used in GRID. I compared the
- 7 Company's normalized schedule to the actual planned outages for
- 8 the past four calendar years and found certain discrepancies. I
- 9 adjusted the GRID schedule to better match historical and
- 10 develop the .3 million dollar adjustment. My \$1 million
- 11 reduction for the plant Wyodak heat rates has been accepted by
- 12 the Company, and basically was an error in their computation of
- 13 the heat rate curve for plant Wyodak.
- We've discussed wind integration costs quite a lot
- 15 already this morning. The Company proposes a charge of some
- 16 \$28 million for wind integration costs broken down into two
- 17 pieces, inter-hour costs and intra-hour costs. My testimony
- 18 concerns primarily -- only the intra-hour costs. Between myself
- 19 and Dr. Powell, we've identified some nine flaws in their
- 20 intra-hour cost analysis, which the Company has not refuted.
- 21 Dr. Powell -- Dr. Powell will present the Division's final
- 22 position on the wind integration cost issue.
- There is a charge in the Company's filed NPC for the
- 24 cost of fuel to start up all gas-powered plants, which we've
- 25 discussed this morning also. The energy, however, is ignored.

- 1 My adjustment of \$2.1 million would give customers a credit for
- 2 that energy produced by the startup fuel.
- 3 My last recommendation is based on the revised cost
- 4 of coal. The actual change to the coal cost was produced by the
- 5 Company based on my data request. I requested that they update
- 6 the coal cost to include consistent assumptions on inflation,
- 7 and to also include current estimates of commodity prices that
- 8 affect coal. So my \$2.6 million reduction is based on these
- 9 company-revised coal costs.
- This coal cost analysis and my other analyses are in
- 11 no way dependent on the inconsistency in annual coal burns.
- 12 That was identified last week during the hearings related to the
- 13 coal inventory adjustment presented by Mr. McGarry.
- 14 Finally, in his rebuttal testimony filed on November
- 15 the 12th, Mr. Duvall included in his revised net power cost
- 16 certain adjustments that increased system net power costs by
- 17 \$19.1 million. Including these new adjustments at this point
- 18 makes it virtually impossible for the parties to write
- 19 discovery, receive discovery responses, analyze the proposed
- 20 adjustments. My recommendation is that the Commission reject
- 21 these last-minute adjustments by Mr. Duvall.
- 22 And that concludes my summary.
- MR. GINSBERG: Thank you. He's available for
- 24 questioning.
- 25 CHAIRMAN BOYER: Thank you, Mr. Evans. Let's turn

- 1 to Ms. McDowell, cross-examination.
- 2 CROSS-EXAMINATION
- 3 BY MS. McDOWELL:
- 4 Q. Good morning, Mr. Evans.
- 5 A. Good morning.
- 6 MS. McDOWELL: So, Commissioner, can you tell me if
- 7 the -- that's about the right volume?
- 8 CHAIRMAN BOYER: That's perfect.
- 9 MS. McDOWELL: All right. Thank you.
- 10 Q. So Mr. Evans, can you turn to your surrebuttal
- 11 testimony, please, at page 4.
- 12 A. Surely.
- 13 Q. I wanted to ask you a little bit about your planned
- 14 outage adjustment.
- 15 A. Okay.
- 16 Q. There at line 70 you -- in the question and answer
- 17 beginning on line 70 you indicate that it's your opinion that
- 18 the Company's planned outage schedule suffers from at least one
- 19 basic flaw. Do you see that?
- 20 A. Line 73, yes.
- 21 Q. And then you go on to discuss that flaw in the next
- 22 Q & A, and you indicate that that flaw is that the Company's
- 23 approach to modeling planned outages required that outages at a
- 24 particular coal plant follow one another with no overlap. Is
- 25 that correct?

- 1 A. Yeah, that's correct. And a normalized data
- 2 schedule like the one used in GRID, you've got added at every --
- 3 every unit at every power plant, which is not normally the case.
- 4 If you were talking about a real schedule, that's not a
- 5 normalized schedule, you would not have an outage at every unit
- 6 at every power plant, so of course you would in all likelihood
- 7 avoid overlap of outages at each separate unit.
- 8 Q. Do you understand that Mr. Duvall's direct testimony
- 9 explained that the no overlap policy was designed to -- both to
- 10 provide plant reliability so you wouldn't have multiple units
- 11 out at the same time, and also to replicate the reality that a
- 12 plant crew, a repair crew typically went from one unit to
- 13 another in the repair process?
- 14 A. I certainly understand the issue about the plant
- 15 crew, but when you're talking about a real planned outage
- 16 schedule such as the planned outage schedules for the calendar
- 17 year 2008, let's say. But when you're talking about these
- 18 normalized schedules it's a completely different story. And in
- 19 my view what you have to do, the main driving force needs to be
- 20 how many megawatts of coal do you have out in a given week. And
- 21 if you follow historically what's -- what that has been, how
- 22 many megawatts of coal have been out in a given week
- 23 historically, that's the most reasonable outage schedule.
- Q. But -- but I understand that your testimony is that
- 25 you're trying to capture the actual practices and schedules the

- 1 Company's used in doing planned outages in your adjustment,
- 2 correct?
- 3 A. Yes.
- 4 Q. And one of those actual assumptions and realities
- 5 the Company faces is that it can't have more than one unit out
- 6 in a plant at one time; isn't that correct?
- 7 A. Yeah. And that's a perfectly logical constraint if
- 8 you're talking about a typical year in which you have maybe, you
- 9 know, two of the four units out on major maintenance at a given
- 10 plant.
- 11 Q. So --
- 12 A. But here we're talking about every unit is going to
- 13 be on maintenance no matter what.
- Q. So are you aware that in the Company's last rate
- 15 case, the Division also sponsored an adjustment for planned
- 16 outages?
- 17 A. Yes, I'm aware of that.
- 18 Q. Let me just get a document to hand you. So
- 19 Mr. Evans, I've handed you what I believe -- let me just check
- 20 with the chairman, but I believe it's Cross Exhibit No. 10.
- 21 I've been informed by Mr. Hickey that we left off at 9 last
- 22 week, so bearing no correction, I'm at Cross Exhibit 10, which
- 23 is the prefiled supplemental direct testimony of Mr. Dalton
- 24 filed in the Company's 2008 rate case.
- A. Yeah.

- 1 Q. Have you had a chance to briefly review that
- 2 testimony?
- 3 A. I -- what -- what part of it do we need to look at
- 4 here?
- 5 Q. Can I direct your attention to page 8, please, line
- 6 114 to 121. Now, there Mr. Dalton indicated that he had a
- 7 correction to make to his planned outage schedule. Do you see
- 8 that?
- 9 A. Yes, I do.
- 10 Q. And the schedule -- or the correction that he states
- 11 was that the Division's recommended adjustments to the planned
- 12 outage date at coal strip unit 3 would overlap the actual
- 13 scheduled planned outage date at coal strip unit 4. In
- 14 practice, there should be no overlapping planned outage dates
- 15 among units at a given plant. To remedy this, the Division
- 16 moved the coal strip unit 3 planned outage date to the period,
- 17 blank. This change is shown in my confidential exhibit. Do you
- 18 see that testimony?
- 19 A. I do.
- 20 Q. So Mr. Evans, based on this testimony, wouldn't you
- 21 agree that in the Company's last rate case, the Division
- 22 expressly endorsed the Company's no-overlap policy for modeling
- 23 planned outages and rates?
- 24 A. Yes, they did.
- Q. And in this case you refer to that policy as a basic

- 1 flaw in the Company's approach, which justifies your adjustment,
- 2 correct?
- 3 A. Yeah, I believe it is a flaw.
- 4 O. Well, Mr. Evans --
- 5 MR. GINSBERG: Let him finish the answer.
- 6 A. It's a flaw because it results in having an
- 7 incorrect or -- compared to historical, it results in an
- 8 incorrect number of megawatts out in a given week.
- 9 Q. (By Ms. McDowell) But Mr. Evans, isn't that a
- 10 complete reversal of the Division's position on this issue since
- 11 the last rate case?
- 12 A. It may be. I don't know.
- Q. And you have not anywhere in your testimony
- 14 acknowledged or explained that change, have you?
- 15 A. No, I haven't. I believe I just did though.
- 16 Q. So Mr. Evans, can I ask you to turn to page 18 of
- 17 your direct testimony. I wanted to ask you a question about
- 18 your startup energy adjustment.
- 19 A. Okay.
- 20 MS. McDOWELL: And I'd offer Cross Exhibit 10.
- 21 MR. GINSBERG: Do we have his direct testimony?
- MS. McDOWELL: Did I say direct --
- MR. GINSBERG: I guess I didn't hear you.
- 24 MS. McDOWELL: I'm sorry, his direct testimony
- 25 page 18.

- 1 MR. GINSBERG: Okay.
- 2 CHAIRMAN BOYER: Are there any objections to the
- 3 admission of RMP Cross Exhibit 10? Seeing none, it is admitted.
- 4 MR. GINSBERG: Can I ask what's all crossed out? Is
- 5 that just confidential information?
- 6 MS. McDOWELL: I just -- to make the cross-
- 7 examination easier I just submitted the redacted copy. So it's
- 8 confidential information that's been redacted.
- 9 Q. So Mr. Evans, I wanted to ask you about your startup
- 10 energy adjustment. And you provide some background to that
- 11 adjustment at the question and answer beginning on line 282. Do
- 12 you see that?
- 13 A. Yes.
- 14 Q. So now, I take it the rationale for your adjustment
- 15 is that net power costs reflect the cost of startup energy, so
- 16 they should also include the -- basically the benefits
- 17 associated with that startup energy in the modeling. Is that
- 18 a -- is that a fair summary?
- 19 A. Well, the net power cost include startup fuel costs,
- 20 it would be cost of producing the startup energy. But there is
- 21 no recognition whatsoever of the startup energy itself.
- Q. So I take it your position would be different if the
- 23 startup costs were not included in the...
- A. The startup fuel costs?
- Q. That's correct.

- 1 A. Yes.
- Q. Do you have Mr. Duvall's testimony and exhibits with
- 3 you?
- 4 A. No, I don't.
- 5 Q. Are you familiar with his net power cost study or
- 6 report?
- 7 A. The exhibit at the back of his testimony?
- 8 Q. That's correct.
- 9 A. Somewhat.
- 10 Q. So I've just handed you Mr. Duvall's Exhibit GND 1
- 11 R, which is the net power cost report that we were just
- 12 discussing. Is this -- are you familiar with this document?
- 13 A. Yes.
- 14 Q. So can I direct your attention to page 13, please.
- 15 And do you see the bottom portion of that power cost report
- 16 where it indicates additional fixed cost? Do you see that?
- 17 A. Yes, I do.
- Q. And there it lists additional O&M and startup fuel
- 19 costs for the Chehalis plant, the Currant Creek, and the Lake
- 20 Side plants. Do you see that?
- 21 A. Yes, I do.
- Q. And it doesn't include any additional O&M or startup
- 23 fuel costs associated with the Hermiston plant, does it?
- A. No. But I believe those are purchased plants so
- 25 that those would have -- those startup fuel costs would occur

- 1 someplace else. I have -- I have looked into GRID and looked at
- 2 the GRID data, and there is startup fuel within the GRID data.
- 3 Q. But doesn't this net power cost report prove that
- 4 there is no startup fuel cost in GRID for Hermiston?
- 5 A. No, I don't believe it does, necessarily.
- 6 Q. Have you reviewed Mr. Falkenberg's rebuttal on this
- 7 point?
- 8 A. I have read his rebuttal testimony.
- 9 Q. And do you recall that he states at page 3 of his
- 10 testimony: However, no startup fuel costs for Hermiston are
- 11 reflected in the GRID MPC output report. While GRID does have
- 12 such inputs, they are used in the commitment logic only, not in
- 13 costing. Are you familiar with that testimony?
- 14 A. No. But if that's the case, then we would need to
- 15 reduce our adjustment.
- 16 Q. So your adjustment is set forth as -- it's your
- 17 exhibit -- I believe it's your confidential Exhibit 6.8,
- 18 correct?
- 19 A. Yes.
- 20 Q. So the amount you have reflected in your adjustment
- 21 for Hermiston is the total of two thousand -- two hundred
- 22 thousand two dollars -- excuse me, 202,293, plus 156,156. Do
- 23 you see that?
- 24 A. Yes, I do.
- 25 Q. Would you accept, subject to check, that that totals

- 1 to \$358,449?
- 2 A. Close enough.
- Q. And so you'd agree, wouldn't you, that that amount
- 4 of startup energy ought to be excluded from your adjustment in
- 5 any of them?
- A. If indeed it's true that the Hermiston startup fuel
- 7 was not passed through to the NPC counter costs on this exhibit,
- 8 yes.
- 9 Q. Mr. Evans, can you turn to Exhibit 6.3 SR to your
- 10 surrebuttal testimony.
- 11 A. Yes.
- 12 Q. So now that exhibit lists the adjustments proposed
- 13 in the Company's rebuttal to correct and update net power costs?
- 14 A. Yeah. I walked through Mr. Duvall's rebuttal
- 15 testimony and pulled out these numbers to -- you know, to show
- 16 that we could go from the nine ninety-nine he proposed
- 17 originally to this 1,000,000,018, which was the total of his
- 18 rebuttal.
- 19 Q. Now, on page 11 of your surrebuttal you discuss
- 20 these adjustments in greater detail, correct?
- 21 A. Okay, yeah.
- Q. And there you acknowledge on lines 218 to 219 that
- 23 most of these adjustments were recommended by the DPU, OCS, or
- 24 UAE, correct?
- 25 A. Yes.

- 1 Q. And you accept all of the adjustments proposed by
- 2 the DPU, OCS, or UAE, correct?
- 3 A. That's correct.
- 4 Q. And the only revisions or adjustments that you
- 5 object to are the -- are the two categories proposed by the
- 6 Company, correct?
- 7 A. The only ones that I object to are the two that
- 8 Mr. Duvall revealed in his rebuttal testimony at the very last
- 9 minute in this case.
- 10 Q. So that's the BPA peaking and grant purchase
- 11 contract and then the Idaho Power and BPA wheeling contracts we
- 12 discussed earlier today, correct?
- 13 A. Yeah.
- 14 Q. Now, there's one update that is omitted from this
- 15 chart, isn't it, and that's your \$2.6 million MPC decrease based
- 16 on your proposed update to coal costs, correct?
- 17 A. Right. Mr. Duvall did not mention that in his
- 18 rebuttal testimony.
- 19 Q. And -- and that's because that adjustment was
- 20 proposed just shortly before Mr. Duvall filed his rebuttal
- 21 testimony, correct, on October 31st, 2009?
- 22 A. I don't remember the date. October 29th, I think.
- 23 No, excuse me.
- Q. So that would be your -- your prefiled
- 25 supplemental... let's see. Your prefiled supplemental direct,

- 1 October 29th, 2009. You're correct.
- 2 A. Okay.
- 3 Q. So you -- you proposed your coal adjustment in this
- 4 supplemental direct testimony, correct?
- 5 A. Yes, I did.
- Q. Now, your surrebuttal testimony, you object to the
- 7 Company's adjustments to include these in the contract
- 8 because -- the adjustment in the contract prices because the
- 9 adjustments were made too late in the case; is that correct?
- 10 A. Well, Mr. Duvall's come along at the very end of the
- 11 case and said that he now wants to include them. I don't see
- 12 how there is time for any of the parties to evaluate their
- 13 inclusion, to do discovery on it, and to analyze whether or not
- 14 they agree that they should be included.
- 15 Q. Now, back to your supplemental direct testimony on
- 16 coal costs. This testimony was filed how many days in advance
- 17 of Mr. Duvall's rebuttal testimony proposing revisions to these
- 18 contracts, which is -- subject to check, it was 14 days prior?
- 19 A. Sounds right, yeah. Yeah, the reason it was filed
- 20 at that date was that we had asked the Company... Actually, I
- 21 think it was a master data request, but we had asked a data
- 22 request in which we asked for the backup for the coal prices
- 23 that the Company had developed, and we expected to receive the
- 24 electronic spreadsheets that the Company had used to develop
- 25 those coal prices. Instead, we got a printout that was, I don't

- 1 know, about yea thick, which was a printout from all the
- 2 different spreadsheets that had been used. We had a meeting at
- 3 the Company's offices --
- 4 Q. So I -- I think you answered my question, which is
- 5 that your testimony was filed approximately two weeks before
- 6 Mr. Duvall's testimony, correct?
- 7 MR. GINSBERG: I think he -- I think that's obvious
- 8 from the dates. But I think he should be able to be free to
- 9 provide the explanation that he wants to provide.
- 10 CHAIRMAN BOYER: Well, but on redirect you can
- 11 give -- you can ask him why did you file --
- MR. GINSBERG: Right.
- 13 CHAIRMAN BOYER: -- days prior. I think I'll
- 14 just --
- 15 MR. GINSBERG: Why not just let him answer?
- 16 CHAIRMAN BOYER: -- quicker if you'll let him
- 17 respond to Ms. McDowell's question.
- THE WITNESS: Yes, sir.
- 19 Q. (By Ms. McDowell) Now, on page 12 of your
- 20 surrebuttal testimony, lines 231 through 234, you object to the
- 21 Company including these new prices for its contracts on the
- 22 basis that the parties are unable to analyze and evaluate the
- 23 proposed contract changes, correct?
- 24 A. Yes.
- Q. Now, it's true, isn't it, that the Company's

- 1 revisions involve either pre-existing contracts or replacement
- 2 contracts to pre-existing contracts?
- 3 A. I know they involve contracts.
- 4 Q. So the auditing process presumably would be to get
- 5 those contracts and verify the price changes in the contracts?
- A. Well, the auditing process would be to get those
- 7 contracts, read and analyze those contracts, then compare what
- 8 is in the contracts to what the Company has done, any
- 9 discrepancies you see, ask questions about, so forth, so on. I
- 10 don't see it as a very simple process myself.
- 11 Q. Now, did you conduct any discovery on those
- 12 contracts in November?
- 13 A. In November? The Division did file data requests.
- Q. And did you address those contracts in your
- 15 surrebuttal?
- 16 A. No.
- 17 Q. So I wanted to hand you what -- another cross
- 18 exhibit. This would be Cross Exhibit 11.
- 19 CHAIRMAN BOYER: I believe this will be RPM Cross
- 20 Exhibit 11.
- MS. McDOWELL: That sounds right.
- Q. Now, before I ask you about this data request, I
- 23 just want to ask you whether you're aware of any party, in their
- 24 surrebuttal testimony, questioning the accuracy of the Company's
- 25 new prices for either the BPA peaking contract or the wheeling

- 1 contracts.
- 2 A. No, I'm not.
- Q. And in fact, with respect to the BPA peaking and
- 4 grant purchase -- county purchase contract, the UAE has stated
- 5 that RMP's correction is accurate and probably should be
- 6 accepted. Are you familiar with that testimony of Mr. Higgins?
- 7 A. No, I wasn't.
- 8 Q. It's at page 11 of his rebuttal. So I wanted to ask
- 9 you about your whole adjustment. You had indicated that it was
- 10 based on updates provided in response to DPU 50.1. Is that
- 11 correct?
- 12 A. Yes.
- 13 Q. So I've handed you the request, the data request
- 14 50.1. I have not provided the confidential attachments. But I
- 15 wanted to ask you about the scope of your adjustment. Your data
- 16 request asks for updated plant coal costs reflecting current
- 17 NYMEX future prices for crude oil, natural gas, diesel fuel, and
- 18 other petroleum products, along with current estimates of
- 19 inflation and escalation. Do you see that?
- 20 A. Yes, I do.
- 21 Q. So it's fair to describe your adjustment as one
- 22 involving forecast prices and not contract revisions, correct?
- 23 A. Yes, it is.
- Q. And it's also fair to say, isn't it, that this coal
- 25 price adjustment is the most comprehensive update proposed to

- 1 any particular cost category in this case, isn't it?
- 2 A. I don't know about that.
- Q. Well, you have updated every aspect of the Company's
- 4 coal costs, correct?
- 5 A. I have not. The Company has.
- 6 Q. Your adjustment proposes to update all aspects of
- 7 the Company's coal cost, correct?
- 8 A. Yes.
- 9 Q. Now, I assume that the goal in proposing your coal
- 10 cost adjustment was to ensure that the Commission has the most
- 11 accurate and up-to-date information available to it in setting
- 12 rates?
- 13 A. Yes.
- 14 Q. And doesn't that same goal support the Company being
- 15 allowed to revise its BPA and wheeling contracts, especially
- 16 when these changes are known and measurable in the test period,
- 17 and much less comprehensive than those proposed by the Division
- 18 in this case?
- 19 MR. GINSBERG: I think I object to the
- 20 characterization "known and measurable" as calling for a
- 21 conclusion.
- 22 CHAIRMAN BOYER: Could you rephrase the question,
- 23 Ms. McDowell?
- MS. McDOWELL: Certainly.
- 25 Q. Doesn't this same goal support allowing the Company

- 1 to revise the BPA and wheeling contracts, especially when those
- 2 changes are set forth in contracts and are much less
- 3 comprehensive than those proposed by the Division?
- 4 A. Well, the goal is the same. The timing is the
- 5 problem. When those adjustments are brought in at the very last
- 6 moment, I just don't believe it's fair to the other parties.
- 7 Q. So your adjustment came in the end of October, the
- 8 Company's adjustment came in on November 12th in response to the
- 9 other party's adjustments, and that's -- yours is timely but the
- 10 Company's is too late; is that correct?
- 11 A. Yeah. I've tried to explain why that's the case,
- 12 but you wouldn't let me finish the answer. Yes, that is the
- 13 case.
- MS. McDOWELL: That's all I have.
- 15 CHAIRMAN BOYER: Thank you. Ms. McDowell. I'm
- 16 assuming Mr. Dodge, Mr. Reeder, or Mr. Proctor will have some
- 17 cross-examination of this witness?
- MR. PROCTOR: I have none.
- MR. DODGE: I have no questions.
- MR. REEDER: I have no questions.
- 21 CHAIRMAN BOYER: Well, we'll turn it to the
- 22 commissioners and -- do you have more?
- MS. McDOWELL: The only --
- 24 CHAIRMAN BOYER: Oh, you have to --
- MS. McDOWELL: I didn't offer Cross Exhibit 11, so

- 1 I'd like do that now.
- 2 CHAIRMAN BOYER: Is there any objection to the
- 3 admission of RMP Cross Exhibit 11?
- 4 MR. GINSBERG: Did I move for the admission of his
- 5 testimony initially?
- 6 CHAIRMAN BOYER: You did not.
- 7 MR. GINSBERG: Someone pointed that out to me. So I
- 8 thought I did, but if I did not, if I could have those -- the
- 9 testimony as identified admitted.
- 10 CHAIRMAN BOYER: Oh, you know, you did,
- 11 Mr. Ginsberg. Thank you. You already did it, and I've marked
- 12 it as such.
- Okay, seeing no objection to the admission of RMP
- 14 Cross Exhibit 11, it is admitted into evidence. We'll turn to
- 15 Commissioner Allen.
- 16 COMMISSIONER ALLEN: Thank you again, Mr. Chairman.
- 17 I was caught a little off guard by the swiftness of counsel in
- 18 the room there. So this is your first trip to Utah, is it not,
- 19 Mr. Evans, as far as testifying in this Commission?
- A. Yes, it is.
- 21 COMMISSIONER ALLEN: Welcome.
- 22 A. Thank you.
- 23 COMMISSIONER ALLEN: I'm just curious, from a global
- 24 standpoint, it seems to me that when we talk about these startup
- 25 energy costs, that we're probably getting a lot more experience

- 1 nationwide in how these operate and how they work. My question
- 2 is, are we starting to get a standard -- those who have done
- 3 this before, are we starting to get a handle on how they should
- 4 be handled from state to state, or is there a uniform set of
- 5 guidelines being developed? Are you still seeing this as a
- 6 case-by-case, region-by-region issue?
- 7 A. For startup?
- 8 COMMISSIONER ALLEN: For startup energy costs, yeah.
- 9 A. I believe there is a standard out there, and the
- 10 standard is to include the startup energy in the production cost
- 11 model.
- 12 COMMISSIONER ALLEN: You've found that in other
- 13 states? You've been in what, a dozen other states?
- 14 A. Yes.
- 15 COMMISSIONER ALLEN: Okay. Great. That was my
- 16 question. Thank you.
- 17 CHAIRMAN BOYER: Commissioner Campbell has no
- 18 questions, nor do I. Let's take an hour and a half recess for
- 19 lunch. Oh, redirect, redirect, if you have --
- 20 MR. GINSBERG: Could we do it after lunch?
- 21 CHAIRMAN BOYER: You'd like to do it after lunch?
- MR. GINSBERG: Yes.
- 23 CHAIRMAN BOYER: Would you like to do that then?
- 24 Let's do that. This is a breaking point. We'll do that after
- 25 lunch. Thank you, Mr. Evans.

- 1 (A recess was taken, 12:10 p.m. to 1:05 p.m.)
- 2 CHAIRMAN BOYER: Okay, we were about to begin
- 3 redirect. But before we do, my colleagues at the Commission
- 4 have asked me to just mention, just to give you folks a heads-
- 5 up, in the '07 case, the litigated -- last litigated case we
- 6 had, we issued a short data request asking for some information
- 7 on the net power cost adjustments in certain fields and files
- 8 and that sort of thing, and so just sort of a heads-up, you'll
- 9 probably be receiving that. Don't be alarmed; it helps us in
- 10 our deliberations. And then our staff likes to do -- to
- 11 replicate representations that were made. Even though we're
- 12 just government employees, we still do a little due diligence.
- Okay, with that announcement, Mr. Ginsberg.
- 14 MR. GINSBERG: Yeah, I have a few questions.
- 15 REDIRECT EXAMINATION
- 16 BY MR. GINSBERG:
- Q. Mr. Evans, first, can you tell us where you found
- 18 this information dealing with the Hermiston startup costs and
- 19 the context of the data that you received?
- 20 A. In the GRID database itself.
- 21 Q. So within the GRID database there is startup energy
- 22 there, startup fuel for Hermiston?
- 23 A. There's startup fuel for Hermiston 1 and 2, yes.
- Q. And that's why you placed Hermiston in your startup
- 25 energy calculation?

- 1 A. That's correct.
- 2 Q. Second, you were asked some questions about your
- 3 supplemental direct testimony that dealt with the coal updated
- 4 prices. Do you recall that?
- 5 A. Yes, I do.
- 6 Q. And you included in your direct testimony, did you
- 7 not, an explanation of this possible adjustment?
- 8 A. Right. In my direct testimony I did include a
- 9 section of discussing that we had attempted to do a coal price
- 10 adjustment, but were unable to because the Company had not
- 11 supplied the spreadsheets that they used to compute the coal
- 12 costs. So we would potentially be producing testimony on that
- 13 issue.
- Q. Do you happen to know whether the Company objected
- 15 to you filing the supplemental testimony?
- 16 A. I don't believe they did.
- 17 Q. And the updated coal prices were provided to you by
- 18 the Company?
- 19 A. That's correct.
- 20 Q. In time for you to file your direct testimony?
- 21 A. No.
- Q. The next thing I'd like to ask you about is this
- 23 issue surrounding unplanned outages.
- 24 A. Okay.
- 25 Q. I think you indicated that in reality, or in the

- 1 real world, planned outages, overlapping plants doesn't occur.
- 2 Is that right?
- 3 A. Overlapping outages within a plant at different
- 4 units is avoided so that you can keep a crew at the plant
- 5 working first on one outage on one unit, on the next unit's
- 6 outage, and so forth and so on.
- 7 Q. Okay.
- 8 A. When you are doing a real outage schedule, not this
- 9 normalized type of thing that we do in a rate case. In a rate
- 10 case there is no crew to worry about.
- 11 Q. So explain the difference between doing it in -- on
- 12 a real-time basis and the adjustment that you've made in the
- 13 rate case.
- 14 A. Right. If you're doing a real annual maintenance
- 15 schedule, you want to avoid having outages within a plant
- 16 overlap; you want to do, you know, unit one, and then unit two,
- 17 three, four and so forth, one right after the other so that you
- 18 can keep that same crew at the plant to work on those outages
- 19 one after the other. But in GRID we're looking at an outage at
- 20 every unit at every plant in the system, and these are -- these
- 21 are not real outages, these are normalized outages, which are
- 22 basically one-forth of the historical outages over the previous
- 23 three or four years. So, you know, we're not worried about
- 24 scheduling crews. What we want to do is make sure the outages
- 25 occur in the same periods that they historically appeared in.

- 1 And that's the difference between my method and the Company's
- 2 method.
- Q. Did you have an opportunity to review Mr. Dalton's
- 4 March 9, 2008 testimony also in that docket that they referred
- 5 to, his prefiled rebuttal testimony?
- 6 A. Yes, I did.
- 7 MR. GINSBERG: And I guess I'd ask the Commission to
- 8 take administrative notice so that the record is complete to
- 9 having his -- all of his testimony available that -- for the
- 10 Commission's review.
- 11 CHAIRMAN BOYER: We will take administrative notice
- 12 of that.
- Q. (By Mr. Ginsberg) Do you happen to know whether you
- 14 adopted Mr. Falkenberg's adjustment on planned outages?
- 15 A. Yes, we did.
- MR. GINSBERG: Thank you. That's all I have.
- 17 CHAIRMAN BOYER: All right. Thank you,
- 18 Mr. Ginsberg. And Mr. Evans, you may be excused. Thank you.
- 19 THE WITNESS: Thank you.
- 20 MR. GINSBERG: Next witness is Artie Powell.
- 21 CHAIRMAN BOYER: Dr. Powell, you haven't been sworn
- 22 in yet?
- THE WITNESS: I don't believe so.
- 24 //
- 25 //

- 1 ARTIE POWELL,
- 2 being first duly sworn, was examined and testified as follows:
- 3 CHAIRMAN BOYER: Thank you. Please be seated.
- 4 DIRECT EXAMINATION
- 5 BY MR. GINSBERG:
- 6 Q. Would you state your name for the record.
- 7 A. Okay. My name is Artie Powell, A-r-t-i-e,
- 8 P-o-w-e-1-1.
- 9 Q. And you filed direct testimony which has been marked
- 10 DPU Exhibit 11, is that correct, with a couple exhibits which
- 11 have been identified on our exhibit list?
- 12 A. Yes. I think there was one exhibit.
- Q. One exhibit?
- 14 A. Yes, 11.1.
- 15 Q. And you filed -- prefiled surrebuttal testimony,
- 16 Exhibit 11 SR, with one exhibit, 11.1 SR?
- 17 A. That's correct.
- Q. Do you have any corrections to make to any of that?
- 19 A. No.
- 20 Q. And that would be the testimony you'd like to
- 21 present to the Commission today?
- 22 A. Yes, it is.
- MR. GINSBERG: Okay. With that, I'd ask to have it
- 24 admitted as identified.
- 25 CHAIRMAN BOYER: Are there any objections to the

- 1 admission of Dr. Powell's direct and surrebuttal testimony?
- 2 Seeing none, they are admitted into evidence.
- 3 Q. (By Mr. Ginsberg) Can you provide a summary of your
- 4 testimony?
- 5 A. Yes, I will. Good afternoon. In direct testimony I
- 6 made or contributed to two adjustments in net power costs. The
- 7 first adjustment added three qualifying facility contracts into
- 8 the GRID model. Since the current contracts expire at the end
- 9 of this year, the Company included them for the first half of
- 10 the test year only. The Division's adjustment includes the
- 11 contracts for the last half of the test year. I believe that
- 12 this adjustment has been adopted by the Company, and I don't --
- 13 so I don't think there's any disputes left around this
- 14 particular adjustment.
- The second adjustment dealt with intra-hour wind
- 16 integration costs. Along with Division witness Mr. George
- 17 Evans, whom we just heard from, I recommended that the
- 18 intra-hour costs be disallowed. However, in surrebuttal
- 19 testimony I again dealt with this, trying to clarify our
- 20 position. While the Division recognizes that intra-hour cost
- 21 may exist, the Company, in the Division's opinion, has not
- 22 provided convincing evidence to support its position on the
- 23 intra-hour wind integration costs. Therefore, in direct
- 24 testimony, as I mentioned, the Division recommended that it be
- 25 disallowed.

- 1 However, in my surrebuttal testimony I presented two
- 2 alternative approaches which resulted in a range of costs from
- 3 \$2.25 to \$3.02 per megawatt-hour. The Division adopted the
- 4 latter value, which results in an adjustment of about
- 5 \$3.5 million in this case. And that's on a Utah basis.
- 6 Finally, in surrebuttal testimony I addressed the
- 7 issue of forecasting generation overhaul expense. In the Monte
- 8 Carlo experiment I demonstrated that the Company's method is
- 9 superior in forecasting this particular expense; therefore, the
- 10 Division in its surrebuttal testimony adopted the Company's
- 11 adjustment for this issue.
- 12 And that concludes my summary.
- MR. GINSBERG: Thank you. He's available for
- 14 questions.
- 15 CHAIRMAN BOYER: Thank you. Thank you, Dr. Powell.
- 16 We'll turn now to Ms. McDowell for examination.
- MS. McDOWELL: Thank you.
- 18 CROSS-EXAMINATION
- 19 BY MS. McDOWELL:
- Q. Good afternoon, Dr. Powell.
- 21 A. Good afternoon.
- Q. So I wanted to pick up on the last issue you just
- 23 addressed, the generation overhaul expense escalation issue.
- 24 That's at your surrebuttal at page 8, correct?
- 25 A. Yes, that's where that starts.

- 1 Q. So by way of background, the Company proposed in its
- 2 2009 expenses for both Currant Creek and Chehalis to use a four-
- 3 year historical average for the generation overhaul expense,
- 4 correct?
- 5 A. That's not exactly the way I would characterize it,
- 6 but --
- 7 Q. Why don't you --
- 8 A. -- essentially they --
- 9 Q. Why don't you describe the adjustment --
- 10 A. They used four years of historical data that they
- 11 had escalated to the test year using an inflation rate, and then
- 12 took the average of those escalated values. So I think we're
- 13 talking about the same thing, but just a little clarification.
- Q. And I take it that the purpose of the four-year
- 15 average is to smooth annual fluctuations in the overhaul
- 16 expense. Is that right?
- 17 A. That's the way I would characterize it, yes.
- 18 Q. And does the use of an escalation factor have any
- 19 bearing on that smoothing function, in your opinion?
- 20 A. Could you kind of -- maybe restate that?
- 21 Q. If the purpose of the use of the four-year average
- 22 is to smooth fluctuations in the expenses, does the use of an
- 23 escalation factor in calculating that average interfere with
- 24 that objective, that objective of smoothing the expenses?
- 25 A. I wouldn't say that it interferes.

- 1 Q. Well, maybe inconsistent with?
- 2 A. I -- I just don't think I'm understanding exactly
- 3 what you're trying to ask, is the problem.
- 4 Q. Okay. Well, let me back up. You initially
- 5 testified against the use of an escalation factor, but then in
- 6 your surrebuttal, as you've explained, you have agreed that the
- 7 use of an escalation factor does produce the most accurate
- 8 result. Is that correct?
- 9 A. Another witness in the case, Miss Brenda Salter,
- 10 testified originally that -- against the Company's method,
- 11 that's correct. And then on surrebuttal testimony, yes, using
- 12 the Company's method is superior to the -- just simply taking
- 13 the average of the four historical years and then escalating
- 14 that average value.
- 15 Q. And is it superior because it produces a more
- 16 accurate --
- 17 A. Yes.
- 18 Q. -- number?
- 19 A. Yes, that's the way I would characterize it.
- 20 Q. All right. So I wanted to ask you then about your
- 21 surrebuttal on the wind -- the Company's wind integration
- 22 charge. And also in your summary you talked about the
- 23 Division's proposal presented in your surrebuttal testimony to
- 24 average certain of the values presented in the case?
- 25 A. That's correct.

- 1 Q. So can you turn to page 7 of your rebuttal, the page
- 2 preceding the page we were just talking about, and there you
- 3 present a table that illustrates the point I think you were
- 4 trying to make about combining different values and averaging
- 5 them. Is that correct?
- 6 A. Well, the averages aren't contained in this
- 7 particular table, but they're derived from this table, yes.
- 8 Q. Okay. So to derive your recommendation, you
- 9 basically averaged, as I understand it, the Company's proposal
- 10 of four eighty-three, the current approved wind integration
- 11 charge of \$1.16, and then UAE's proposed intra-hour charge of
- 12 \$3.02. Is that right?
- 13 A. That was one of those averages. That produced --
- 14 just below there on line 129, that's the \$3 value.
- 15 Q. And that's the ultimate value you recommended,
- 16 correct?
- 17 A. 3.02, yes.
- 18 Q. So now, there is an additional intra-hour cost value
- 19 on the record in this case, isn't there, the BPA intra-hour wind
- 20 integration charge?
- 21 A. I believe it is.
- Q. So that number, we've had testimony on that already
- 23 today, that number updated is five eighty-nine a megawatt-hour.
- 24 Does that sound correct to you?
- 25 A. I believe I heard that earlier today.

- 1 Q. And to your knowledge, no party has objected to the
- 2 Company including this BPA charge in its rates as a part of its
- 3 wind integration charges for wind facilities in BPA's control
- 4 area, correct?
- 5 MR. GINSBERG: If you know.
- 6 A. I'm not sure.
- 7 Q. (By Ms. McDowell) Okay. To your knowledge, no one
- 8 has objected?
- 9 A. I don't remember anybody particularly objecting, but
- 10 I could be wrong.
- 11 Q. And the Division has not objected to that?
- 12 A. I don't believe we did.
- Q. Now, would you accept, subject to check, that if you
- 14 add that BPA value of five eighty-nine into your average of the
- 15 non-zero recommendations, recommendations that would produce an
- 16 intra-hour average of \$3.73 as opposed to your \$3.02 number?
- 17 A. Say it again. What was -- what was the average
- 18 again? Three --
- 19 Q. So if you're averaging, you simply add the BPA
- 20 number of five eighty-nine to the numbers that you averaged to
- 21 get your 3.02 number?
- 22 A. Okay.
- Q. The RMP number of four eighty-three, the existing
- 24 charge of one sixteen, and the UAE recommendation of 3.02, if
- 25 you add a fourth number and calculated the average, it would

- 1 produce an average cost of \$3.73 for intra-hour cost?
- 2 A. That's probably about correct.
- Q. And then if you added the inter-hour cost to that,
- 4 it would produce a total wind integration charge of \$5.52?
- 5 A. Yes, I believe that's right.
- Q. And that would be in comparison to the value of four
- 7 eighty-one, which is option 3 on your chart?
- 8 A. Comparable in what sense?
- 9 Q. Just that the total -- that four eighty-one
- 10 represents the total of inter-hour plus an average intra-hour
- 11 number.
- 12 A. Yes, that's correct.
- 13 Q. Okay.
- 14 A. However, I wouldn't accept the five eighty-nine. I
- 15 haven't done any analysis or review of BPA studies, so I don't
- 16 know where that number comes from or what it consists of.
- 17 Q. So let me ask you a question about your direct
- 18 testimony, page 13. Again, this is on the wind integration
- 19 issue.
- 20 A. Okay. Page 13, did you say?
- 21 Q. That's correct. Now, there you -- at the bottom of
- 22 page 13 and the top of page 14 you quote a wind integration --
- 23 or you quote some industry experts commenting on the issue of
- 24 considering load variability in determining wind integration
- 25 charge. Do you see that?

- 1 A. Yes, I do.
- Q. Now, on the next page you have a footnote 6 that
- 3 attributes that quote to the publication that's listed in that
- 4 footnote. Do you see that?
- 5 A. Yes.
- 6 Q. So I just wanted to hand you a copy of that report.
- 7 A. Okay.
- 8 MS. McDOWELL: So this will be Cross Exhibit 12.
- 9 Q. So Mr. Powell -- or excuse me, Dr. Powell -- I've
- 10 handed you what I've marked as Cross Exhibit 12, RMP Cross
- 11 Exhibit 12. And can you verify that this is the report to which
- 12 you have cited in your testimony?
- 13 A. I believe it is.
- Q. So I note in footnote 6 that you attribute the date
- 15 of the report as 2009, but there's a question mark there.
- 16 A. Yes.
- Q. And can you turn to the first page of the exhibit.
- 18 A. The cover?
- 19 Q. That's correct.
- 20 A. Okay.
- 21 Q. And do you see it says Global Wind Power, 2004?
- 22 A. No, I -- well, I see it now. I did not see that
- 23 when I looked at this before.
- Q. So does that...
- 25 A. That --

- 1 Q. Suggest that this report is vintage 2004 and not --
- 2 A. Yes.
- 3 Q. -- 2009?
- 4 A. It probably does.
- 5 Q. Okay. So Dr. Powell, did you read this entire
- 6 report?
- 7 A. I did, but it's been several months ago.
- 8 Q. Okay. So I'm sure then you notice that the report
- 9 includes PacifiCorp's then-current wind integration study as a
- 10 case study within the report?
- 11 A. If you could point that out.
- 12 Q. It's on page 5.
- 13 A. Yes, okay.
- Q. And the report cites PacifiCorp's then-current wind
- 15 integration charge of \$5.50 a megawatt-hour from its IRP. Do
- 16 you see that on the second paragraph under the PacifiCorp
- 17 section?
- 18 A. Yes.
- 19 Q. And do you see also that that \$5.50 number does not
- 20 include the cost of additional regulating reserves?
- 21 A. By regulating reserves, you regulate up and regulate
- 22 down. Is that what you're referring to?
- Q. I'm just indicating that that -- that in the report,
- 24 in talking about the breakdown of the \$5.50 charge, it indicates
- 25 that it consists of a reserve component and an imbalance cost,

- 1 but does not include a regulating reserve. Do you see that?
- 2 A. I see that it doesn't say anything about the
- 3 regulating reserves, but on the other hand, I'm not -- I don't
- 4 know what these two components consist of either.
- 5 Q. It suggests it's less comprehensive than the charge
- 6 in this case, doesn't it?
- 7 A. I can't draw that conclusion myself.
- 8 Q. So there's no criticism or concerns expressed about
- 9 the PacifiCorp wind integration study in this report you cite,
- 10 are there?
- 11 A. I don't recall any.
- Q. And it's interesting, isn't it, that the \$5.50
- 13 number is the number that we just discussed that would be
- 14 produced by that alternative averaging proposal that I talked
- 15 with you about, partially the same number, isn't it?
- 16 A. Yes, it is.
- 17 Q. But this number is an estimate that dates back five
- 18 years, isn't it?
- 19 A. That's correct.
- 20 Q. So Dr. Powell, doesn't that provide additional
- 21 validation for the wind integration charges proposed by
- 22 PacifiCorp in this case?
- 23 A. I don't believe it overcomes the shortfalls in the
- 24 Company's study that was presented in this case, no.
- 25 Q. But this is a report you've cited in your testimony,

- 1 isn't it?
- 2 A. Yes, it is.
- 3 MS. McDOWELL: That's all I have.
- 4 CHAIRMAN BOYER: Thank you, Ms. McDowell.
- 5 Mr. Proctor, questions for Dr. Powell?
- 6 MR. PROCTOR: Yes. Thank you, Mr. Chairman.
- 7 CROSS-EXAMINATION
- 8 BY MR. PROCTOR:
- 9 Q. Dr. Powell, my questions relate to the generation
- 10 overhaul expense and your testimony on that matter which, as I
- 11 recall -- and correct me if I'm wrong -- appeared for the first
- 12 time in surrebuttal. Is that correct?
- 13 A. That's correct.
- Q. Now, with the direct testimony filed by Ms. Salter,
- 15 the Division accepted, or it applied to this general rate case
- 16 the Commission's August 2008 order in the 2007 general rate
- 17 case, correct?
- 18 A. Would you run through that one more time?
- 19 Q. Yeah, that was confusing, wasn't it? In
- 20 its direct -- in direct testimony the Division's witness, Miss
- 21 Salter.
- 22 A. In this case?
- 23 O. In this case?
- 24 A. In this case.
- 25 Q. I'm sorry. Applied the Commission's calculation, if

- 1 you would, of generation overhaul expenses that it had adopted
- 2 in the 2007 general rate case order.
- 3 A. That's correct. Thank you for the clarification.
- 4 Q. Sorry it was so labored in the first place. And
- 5 then Ms. Salter in her testimony, surrebuttal testimony,
- 6 referred to you and made some policy statements. We won't get
- 7 into those.
- 8 So is it fair to state then that your testimony is
- 9 the one that actually at this point adopts -- adopts the
- 10 Company's method of calculating the generation overhaul expense?
- 11 I'm sorry.
- 12 A. It's my fault. I can't testify and drink at the
- 13 same time. I'm sorry.
- Q. No, that's okay.
- 15 A. My -- I think the way I would characterize it, in
- 16 answer to your question, is that my testimony is the basis for
- 17 the adoption of the Company's position that Ms. Salter talked
- 18 about in her testimony.
- 19 Q. Was there any particular event or data response that
- 20 prompted you to address this issue for the first time in
- 21 surrebuttal?
- 22 A. Yes, I believe there is.
- Q. What was it?
- A. As you mentioned in your question, this issue was --
- 25 or implied in your question, this issue was in the '07 rate case

- 1 as well. There the Commission, if you will, rejected the
- 2 Company's methodology. When they filed this particular rate
- 3 case, Miss Salter came to me and said, the Company did it again,
- 4 and explained what she meant by that. And so I recommended that
- 5 we make the same adjustment consistent with the Commission's
- 6 order. And that's what we filed in direct testimony.
- 7 I believed at that time that that would be the end.
- 8 And maybe I was being somewhat naive, but I assumed that on
- 9 rebuttal testimony the Company would say, oh, we forgot, or
- 10 something to that effect, and would make the appropriate or the
- 11 consistent adjustment with that. However, when Mr. McDougal
- 12 filed his rebuttal testimony he was still adamant that -- about
- 13 the way they were doing that particular adjustment. So that's
- 14 when I decided to take a look in more detail at what the Company
- 15 was doing.
- 16 Q. You were present when Ms. Salter testified?
- 17 A. I was.
- 18 Q. And do you recall that Miss Salter testified that
- 19 the -- that Mr. McDougal's direct testimony and Mr. McDougal's
- 20 rebuttal testimony, insofar as this issue was concerned, were
- 21 precisely the same?
- 22 A. Yes.
- 23 Q. The tables upon which he was relying for his
- 24 calculations were the same tables in both sets of testimony;
- 25 were they not?

- 1 A. Yes.
- Q. Now, I want to -- because this issue is -- at least
- 3 I've been confused by it, I want to make very clear that what
- $4\,$ we're talking about is the two opposing methods. And on page $8\,$
- 5 of your testimony, in response to the first question you were
- 6 asked in surrebuttal about the generation overhaul, you
- 7 described the difference between two forecasting methods. The
- 8 first approach -- and I'm reading here -- uses the average of
- 9 four historical years to forecast the amount contained in the
- 10 fifth year. Is that method one where you take four actual
- 11 years' generation overhaul expense, average those four years,
- 12 and then escalate the average in order to project for the fifth
- 13 year?
- 14 A. That's my understanding, yes.
- 15 Q. The second approach -- and this would be the one
- 16 that the Company utilized in 2007 and then utilized again
- 17 here -- was to escalate each of the actual expense for a year,
- 18 and then use the escalated average -- or excuse me, the
- 19 escalated average -- escalated average in order to calculate the
- 20 fifth year? Now, that was poorly put, but...
- 21 A. Well, the way -- the way I've said it here is the
- 22 second approach, example 2, first escalates the historical years
- 23 to arrive at a fifth year dollar equivalent. The average of
- 24 these escalated four years is used as the forecast for the
- 25 amount in the fifth year.

- 1 Q. Now, in that second method, in between escalating
- 2 each of the historical years and calculating the fifth year, is
- 3 there another escalation factor that's applied?
- 4 A. No, not in the -- there -- there are -- maybe I
- 5 could just elaborate --
- Q. Please do.
- 7 A. -- just a little bit. There are two different ways
- 8 that you could do the Company's method. You could escalate the
- 9 four -- or excuse me. If you have four historical years and
- 10 you're trying to forecast what the fifth year value is, which
- 11 you don't know, you could do it the way I've described here in
- 12 my testimony, which is the way Mr. McDougal's example in his
- 13 direct and his rebuttal testimony does it. A mathematically
- 14 equivalent way would be to take the three years, escalate those
- 15 to the fourth year, and then escalate the whole thing to the
- 16 fifth year. But like I said, algebraically they're -- they're
- 17 equivalent methods. So I'm -- so in the way that I did it here,
- 18 there is no second application of the escalation; it's all taken
- 19 into account by escalating the four historical years.
- 20 Q. In the method that the Division first requested --
- 21 well, actually that came out of the '07 case that Miss Salter in
- 22 her direct contended should be used, what is the escalation
- 23 factor used then on that four-year average? Is it an inflation
- 24 rate?
- 25 A. It's an inflation rate.

- 1 Q. Do you know what inflation rate the Division used in
- 2 its direct examination?
- 3 A. I do not.
- 4 Q. Do you know what inflation rate Mr. McDougal used in
- 5 his method, the second method we talked about?
- 6 A. No, I do not. You're -- you're talking about in his
- 7 actual adjustment?
- 8 Q. Yes.
- 9 A. As opposed to the example that he has in the
- 10 testimony of the box?
- 11 Q. Yes. I want to talk about actuals, yes.
- 12 A. Yes.
- 13 Q. You --
- 14 A. I don't know. But I would add that it's irrelevant
- 15 to the experiment that I did.
- 16 Q. Well, because in your experiment you added, I
- 17 believe, two additional factors to the calculation that the
- 18 Company was propose -- is proposing; is that right?
- 19 A. I added two factors to the example that Mr. McDougal
- 20 had in his rebuttal testimony, because I did not believe that
- 21 his example was, if you will, realistic enough.
- Q. And what were those two factors?
- 23 A. One is I changed the -- on example one or method one
- 24 I changed the application of the inflation rate itself.
- 25 Mr. McDougal's example simply averages the four historical years

- 1 and calls that the forecast for the fifth year. As I've
- 2 explained here, what I did was I averaged the four years and
- 3 then used the inflation rate to escalate that to a fifth year
- 4 forecast. The second component that I added was random
- 5 variation to the historical values or the historical base
- 6 values.
- 7 O. And that would be random. And this is in the second
- 8 method, or the method the Company proposes, you added random
- 9 variation to each escalated historical year?
- 10 A. Yes, but I did it on both methods. So in other
- 11 words, the base -- there's a base value that you start with,
- 12 which maybe it would be easier if we turned to my exhibit, if I
- 13 could.
- Q. Well, I think we'll get to this in a minute. But
- 15 I -- if you could describe -- finish your answer, if you would.
- 16 If it wouldn't make sense, then we'll go on, Mr. Powell --
- 17 Dr. Powell. Pardon me.
- 18 A. Well, if you look at the exhibit, page 2 of 3, up in
- 19 the left-hand corner there I have the base and the years one
- 20 through five. And what I'm saying is that the first year's
- 21 value is a hundred, then you go to 102.5, et cetera. That's
- 22 what I'm referring to as the base values for each year. And
- 23 those are escalated using the inflation rate. So the second
- 24 year is inflated from the first year, the third from the second,
- 25 and so forth. And then for each of the methods I've added

- 1 random variation for each of these base values.
- Q. How did you calculate the random variation?
- 3 A. I chose them using Excel from a uniform distribution
- 4 from minus five to five.
- 5 Q. And was that applet applied to the base value or to
- 6 the escalated base value?
- 7 A. Well, we're talking about the same thing. What I'm
- 8 calling the base values in my testimony are these five yearly
- 9 values that are escalated year from year using the inflation
- 10 rate. So that is the base values. And then yes, I added random
- 11 variation to each one of those values, and then conducted the
- 12 calculations that we've been talking about.
- Q. Using method one?
- 14 A. Or method two.
- 15 Q. Or method two. Now, on Table 2, it's page 10 of
- 16 your surrebuttal, it's row C, random variate, your random -- you
- 17 made no variation to year one, and then there were variations
- 18 that increased in the next three years. Is that correct?
- 19 A. Hang on one second.
- 20 Q. Sure.
- A. On my copy it's page 11, so we're on the same page.
- 22 It is Table 2.
- Q. So column -- or row C, row C?
- A. So ask your question again. The random variate?
- 25 Q. You applied no random variate to year one, but you

- 1 then -- you did to two, a larger one to year three, and a larger
- 2 one to year four?
- 3 A. That's correct.
- 4 Q. Why would the variate -- the random variation occur
- 5 in an ever-increasing amount when you're looking at historical
- 6 values?
- 7 A. That's just the mystery of a random number
- 8 generator.
- 9 Q. Is that --
- 10 A. This is only one particular example.
- 11 Q. Is -- and this is where you actually applied your
- 12 methods to Mr. McDougal's direct and rebuttal table; is that
- 13 correct?
- 14 A. That's correct. And again, if I could refer you to
- 15 the exhibit on page 2, the Table 2 and my -- the body of the
- 16 testimony is actually example number 17, or the iteration number
- 17 17. So you can see what the random variates are doing there.
- 18 If you just simply look at, say, the first couple, you'll notice
- 19 that one's negative, one's positive, and the next one's
- 20 negative, so --
- Q. Well, I'm sorry, but --
- 22 A. It was just a coincidence on that particular...
- Q. That's one of the 10,000 iterations that you -- you
- 24 performed?
- A. Exactly.

- 1 Q. I'm looking at Table 2 on page 10 of your testimony.
- 2 A. And --
- 3 Q. That's what I'm looking at.
- A. And I'm saying that if you look on the exhibit, row
- 5 17, Table 2 is row 17 from this exhibit.
- 6 Q. So this is -- is or is not your methods -- or your
- 7 changes to method one and method two applied to Mr. McDougal's
- 8 direct and surrebuttal tables?
- 9 A. That's correct.
- 10 Q. Were his based upon the actual historicals that the
- 11 Company used to support its request in this rate case for
- 12 generation overhaul expense escalations?
- 13 A. Yes, that's my understanding.
- Q. So the one that we see on Table 2, in essence, is
- 15 your calculation method, your experiment, if you will, applied
- 16 to the Company's request in this rate case?
- 17 A. I would say it just slightly different. It's
- 18 applied to the example that Mr. McDougal provided in his
- 19 testimony in rebutting the Division's direct testimony.
- 20 Q. And you conclude on page 9 -- now, this would be
- 21 line 182, so I don't know -- on my copy. I presume that -- it's
- 22 the paragraph -- two paragraphs just above your Table 2.
- 23 A. I believe I see where you're talking about.
- Q. Line 182, at least that I have, says -- concludes:
- 25 Thus, in this example, method one's forecast is better than

- 1 method two's.
- 2 A. That's correct.
- Q. And that would be, again, based on Mr. McDougal's
- 4 example in his direct and rebuttal testimony?
- 5 A. As modified by what I've been doing here in Table 2.
- Q. And so at this point in your testimony, in fact, the
- 7 method that the Commission adopted in the 2007 general rate
- 8 case, with your adjustments, in fact provides a better forecast
- 9 than the Company's method utilizing your adjustments?
- 10 A. For this one particular random draw, yes, that's
- 11 true.
- MR. PROCTOR: Thank you, Mr. Powell. Nothing
- 13 further. Dr. Powell, nothing further.
- 14 CHAIRMAN BOYER: Thank you, Mr. Proctor. Mr. Dodge,
- 15 questions for Dr. Powell?
- MR. DODGE: No questions.
- 17 CHAIRMAN BOYER: Mr. Reeder?
- 18 CROSS-EXAMINATION
- 19 BY MR. REEDER:
- 20 Q. Dr. Powell, you recommended some adjustments on net
- 21 power costs on occasion, or because of updates, I think you
- 22 testified.
- A. Will you repeat that, please?
- Q. Did you recommend adjustments to the net power costs
- 25 because of some updates or changes?

- 1 A. I wouldn't characterize them as updates. I made an
- 2 adjustment to net power costs based on information that the
- 3 Division had in its possession.
- 4 O. What kind of information was that?
- 5 A. On the QF contracts. We had two QF contracts,
- 6 although they were expiring at the end of the year, had been
- 7 filed with the Commission. And I believe on the Tesoro contract
- 8 we used avoided cost from the most recent avoided cost filing
- 9 that the Company had made.
- 10 Q. So where contracts to be in effect during the test
- 11 period come to your attention, do you believe they're
- 12 appropriate to update for them?
- 13 A. I believe it's appropriate to adjust for them, yes.
- Q. What's the Division's policy with respect to those
- 15 adjustments?
- 16 A. That those known contracts should be included as
- 17 part of that power cost.
- 18 Q. Would you make a recommended adjustment if they had
- 19 a power contract?
- 20 A. I'm not familiar with the Nevada Power contract, so
- 21 I can't say.
- Q. Do you have a copy of it?
- 23 A. I don't.
- Q. Does the Division have a copy of it?
- 25 A. There may be a copy in the Division. I'm not sure.

- Q. Were you present in the hearing this morning?
- 2 MR. GINSBERG: He's indicated he's not familiar with
- 3 it, so I don't know where this line of questioning can go.
- 4 Q. (By Mr. Reeder) Were you present in the hearing
- 5 room this morning?
- 6 MR. GINSBERG: I have an objection.
- 7 CHAIRMAN BOYER: I'm going to let him answer whether
- 8 or not he was in the hearing room this morning.
- 9 MR. GINSBERG: Okay, fair enough.
- 10 A. Yes, I was in the hearing room this morning.
- 11 Q. (By Mr. Reeder) Did you hear the cross-examination
- 12 of Mr. Duvall?
- 13 A. I did.
- 14 Q. Do you recall that cross-examination concerning the
- 15 Nevada Power contract?
- 16 A. I did not -- or at least I don't recall --
- Q. Okay to snooze if you want to, Dr. Powell.
- 18 A. What's that?
- 19 Q. It's okay to snooze if you want to. Just tell me
- 20 you weren't paying attention.
- 21 A. I was preoccupied with other Division business.
- MR. REEDER: No further questions.
- 23 CHAIRMAN BOYER: Thank you, Mr. Reeder.
- 24 Commissioner Allen? Commissioner Campbell?
- 25 COMMISSIONER CAMPBELL: So, Dr. Powell, does your --

- 1 does your experiment have any implications for other adjustments
- 2 that we commonly average?
- 3 A. It actually may. Before surrebuttal testimony was
- 4 filed and after I had conducted this experiment, I contacted the
- 5 Company and spoke with them. I think last week Ms. Salter spoke
- 6 on this topic for just a few minutes. And there may be one or
- 7 two other areas where we make this type of averaging to use as a
- 8 forecast that it may be applicable.
- 9 COMMISSIONER CAMPBELL: When would you and when
- 10 would you not use it?
- 11 A. I think based on the experiment that I've conducted,
- 12 this would be my preferred method out of these two. But I think
- 13 I indicated -- or I did indicate in my surrebuttal testimony
- 14 that there may be other methods that I did not explore. But
- 15 between these two methods that were before the Commission, the
- 16 Company's method appears to be the superior method. So I
- 17 would -- I would go with that method over the other one.
- 18 COMMISSIONER CAMPBELL: Let me -- I'm going to ask
- 19 you a policy question. I know you're not formally a policy
- 20 witness, but you are the manager of the energy section, aren't
- 21 you?
- 22 A. Yes, I am.
- COMMISSIONER CAMPBELL: And you're familiar with the
- 24 report the Commission receives as it relates to the Company's
- 25 earning levels?

- 1 A. Yes, I am familiar with that report.
- 2 COMMISSIONER CAMPBELL: Is it -- is it your belief
- 3 that the Company's been under-earning over the last four or
- 4 five years, based on that report?
- 5 A. I think it's very likely that they have been, yes.
- 6 COMMISSIONER CAMPBELL: And we also regulate Questar
- 7 Gas, and we go through the same hearing process. And I guess
- 8 when we look at their earnings, it appears that they -- they
- 9 don't under-earn. And do you have -- do you have, as kind of a
- 10 Division -- as the Division manager that follows this and has to
- 11 decide whether to call in a utility for a rate case, do you have
- 12 an opinion as to why one company seems to be able to hit their
- 13 authorized return year after year, and then another company
- 14 seemed to routinely under-earn? I mean, we do the same methods
- 15 here in this hearing room, right?
- 16 A. I wouldn't say I have an extensive opinion or
- 17 position, but I do think that probably one complicating factor
- 18 that PacifiCorp faces that Questar doesn't is the fact that they
- 19 operate in multiple jurisdictions. And that probably
- 20 contributes to not only the complexity of the company, but I
- 21 think the complexity of trying to control their costs. I know
- 22 Questar operates in Wyoming also, but it's fairly small relative
- 23 to the Utah division.
- 24 COMMISSIONER CAMPBELL: I guess my final question
- 25 would be, there were some criticisms, or at least some -- some

- 1 questions concerning that report, that that report is normalized
- 2 according to the way the Company normalizes. I think the
- 3 implication was that the Commission never sees an earnings
- 4 report based on the way we calculate earnings. Is the Division
- 5 looking at ways or -- alternate ways to calculate whether the
- 6 Company's over-earning or under-earning, or where we can have a
- 7 little more certainty around that question?
- 8 A. Yes. I think the last report that we submitted to
- 9 the Commission was for some month back in the spring, May I
- 10 think was the date that the report actually goes up through.
- 11 One of the reasons that we haven't filed a more recent report is
- 12 we're trying to look at ways of altering or updating that
- 13 report, modifying it so that it gives us a clearer picture of
- 14 what the Company's earnings actually are.
- 15 CHAIRMAN BOYER: Okay. Thank you, Dr. Powell. I
- 16 have no questions. But before we go to redirect, Ms. McDowell,
- 17 did you wish to offer Exhibit RMP Cross Exhibit 12 into
- 18 evidence?
- 19 MS. McDOWELL: I do. Thank you, Chairman.
- 20 CHAIRMAN BOYER: Are there any objections to the
- 21 admission of RMP Cross Exhibit 12? Seeing none, it is admitted.
- MS. McDOWELL: Thank you.
- 23 CHAIRMAN BOYER: Redirect, Mr. Ginsberg?
- MR. GINSBERG: Just a couple questions.
- 25 //

1 REDIRECT EXAMINATION

- 2 BY MR. GINSBERG:
- Q. In answers to some questions from Mr. Proctor, you
- 4 indicated that the inflation rate that was used by the Company
- 5 wouldn't actually make a difference in your analysis. And I
- 6 think you were trying to give an answer as to why that wouldn't
- 7 occur. Can you provide that?
- 8 A. Again, if we look at Exhibit 11.1 SR, it's not
- 9 perfectly clear from this particular exhibit, but if you worked
- 10 the algebra out you'd notice that the forecast using method two,
- 11 or the Company's method, actually cancels out, if you will, and
- 12 so the inflation rate itself does not affect the forecast.
- 13 That's not necessarily true on method one. In fact, like I say,
- 14 it's difficult to see from here, but the solution of method one
- 15 getting to the forecast of the fifth year is proportional to the
- 16 one over one plus the inflation rate. So if the inflation rate
- 17 is actually larger, which I think with some of the criticisms
- 18 that were leveled against my study last week by the office's
- 19 witness, Miss Ramas, that would actually make method one's
- 20 forecast worse relative to method two.
- 21 Q. Is that --
- 22 A. You're looking like that was a dumb answer.
- Q. Don't use me as your source.
- A. The point I'm trying to make is that the inflation
- 25 rate, the level of the inflation rate is not relative to the

- 1 outcome of this experiment.
- 2 Q. Okay.
- 3 A. A criticism of the inflation rate is a criticism of
- 4 the inflation rate that the Company used in their actual
- 5 adjustment. But it has nothing to do with this Monte Carlo
- 6 study. It's not a valid criticism.
- 7 Q. One final question. The reference that you made to
- 8 not including loads in the wind integration study, was that why
- 9 you quoted that article?
- 10 A. Yes, it is.
- 11 Q. And can you explain what you mean by including loads
- 12 in a wind integration study?
- 13 A. The -- as the wind varies within the hour, the
- 14 amount of reserves necessary to, if you will, back up that wind
- 15 will be related to the loads that the Company has to serve.
- 16 According to this particular article, other studies on wind
- 17 integration costs have found that inclusion of those loads, the
- 18 correlation between the generation for the wind resources and
- 19 those loads significantly reduces the need for those reserves.
- 20 So that's the reason why I was quoting from that paper. It was
- 21 a criticism that has been brought up in the IRP process, for
- 22 example, of the Company's wind integration studies.
- Q. So the Company's wind integration studies doesn't
- 24 include loads going up and down within that hour also?
- 25 A. That's correct, they do not include those.

- 1 MR. GINSBERG: That's all I have. Thank you.
- 2 CHAIRMAN BOYER: Okay. Thank you, Dr. Powell. You
- 3 may be excused. Those were the witnesses scheduled for today.
- 4 I notice Ms. Murray is in the audience today. We could -- if
- 5 she were prepared and you wanted, we could take her testimony
- 6 today. I fully expect that we'll be taking most of the day
- 7 tomorrow on Messrs. Hayet and Falkenberg, but we're here to
- 8 serve. Do you have a preference, Mr. Proctor?
- 9 MR. PROCTOR: Chairman, yes, we've discussed the
- 10 matter, and Ms. Murray, now would be a good time for her to
- 11 testify. While Mr. Falkenberg is here, the parties felt more
- 12 comfortable if they had a continuous period of time tomorrow
- 13 morning. So unless the Company has some other person readily
- 14 available, Ms. Murray would be the last witness for today.
- 15 CHAIRMAN BOYER: Anybody have any objection to
- 16 hearing Ms. Murray's testimony now?
- MS. McDOWELL: No. That sounds like a fine way to
- 18 proceed, from our perspective.
- 19 CHAIRMAN BOYER: Very well, let's do that. Thank
- 20 you.
- 21 Ms. Murray, thank you for accommodating our
- 22 schedule.
- THE WITNESS: You're welcome.
- 24 CHERYL MURRAY,
- 25 being first duly sworn, was examined and testified as follows:

- 1 CHAIRMAN BOYER: Thank you. Please be seated.
- 2 DIRECT EXAMINATION
- 3 BY MR. PROCTOR:
- 4 Q. Would you state your name and by whom you're
- 5 employed.
- 6 A. Cheryl Murray. I'm employed by the Office of
- 7 Consumer Services.
- 8 Q. Ms. Murray, you filed surrebuttal testimony in this
- 9 matter consisting of six pages and marked as OCS 7 S Murray,
- 10 filed November 30th, 2009; is that correct?
- 11 A. Yes.
- 12 Q. Do you have any changes or additions that you
- 13 believe are necessary to that testimony?
- 14 A. No, I do not.
- 15 Q. If I were to ask you the same questions today as
- 16 were asked of you in the prefiled written testimony, would your
- 17 answers remain the same?
- 18 A. Yes, they would.
- MR. PROCTOR: I would move to admit -- or actually
- 20 offer surrebuttal testimony of Cheryl Murray as identified.
- 21 CHAIRMAN BOYER: Any objection to the admission of
- 22 Ms. Murray's surrebuttal testimony?
- MR. REEDER: No objection.
- 24 CHAIRMAN BOYER: Seeing that, it is admitted.
- 25 Q. (By Mr. Proctor) Ms. Murray, do you have a summary

- 1 of your testimony?
- 2 A. Yes, I do.
- 3 Q. Could you provide that, please.
- 4 A. It is the Office's position that net power cost
- 5 updates made on an ad hoc basis are not likely to have
- 6 symmetrical benefit for both the Company and the consumers, and
- 7 will not result in just and reasonable rates. Therefore, the
- 8 Office recommends that net power cost updates not be allowed in
- 9 this case. If the Commission believes that some level of
- 10 updates to the Company's originally filed case may be
- 11 appropriate in future rate cases, the Office recommends that the
- 12 matter be decided through rule making.
- 13 That concludes my summary.
- MR. PROCTOR: Ms. Murray is available for cross-
- 15 examination.
- 16 CHAIRMAN BOYER: Thank you. Ms. McDowell?
- 17 CROSS-EXAMINATION
- 18 BY MS. McDOWELL:
- 19 Q. Thank you. Good afternoon, Ms. Murray.
- A. Good afternoon, Ms. McDowell.
- 21 Could I take just one second? I want my feet to
- 22 touch the... Okay, never mind.
- 23 CHAIRMAN BOYER: Yes, make yourself comfortable.
- 24 THE WITNESS: I'll just swing them.
- 25 Q. (By Ms. McDowell) So I wanted to ask you about some

- 1 comments along page 1 of your testimony. So lines 7 through 9,
- 2 there you state that your -- the policy position of the Office
- 3 regarding updates to this -- the purpose of your testimony is to
- 4 present the Office's position regarding updates in this and
- 5 future cases. Is that -- is that fair?
- 6 A. That's fair.
- 7 Q. And then you go on to state the position, which is
- 8 what you said in your summary, you're opposed to such updates.
- 9 And then you explain on lines 19 and 21 that all elements of the
- 10 rate case have to be considered as to how they function with and
- 11 impact other elements such as expenses and revenues. Do you see
- 12 that?
- 13 A. I do, yes.
- Q. So is that a reference to the matching principle?
- 15 A. Yes, it is.
- 16 Q. Okay. Well, I want to ask you to consider some
- 17 other elements of this case for a moment, as you suggest. It's
- 18 true, isn't it, that the Office has proposed several updates to
- 19 the Company's general revenue requirements in this case?
- 20 A. I would disagree with that.
- 21 Q. Well, for example, the Office proposed to reduce
- 22 capital additions in this case based upon actual -- I think they
- 23 referred to them as year-to-date balances taken from
- 24 August 2009. Isn't that correct?
- 25 A. That is correct that we have made that adjustment,

- 1 recommended that adjustment. And I think that there needs to be
- 2 a clear distinction between adjustments and updates.
- 3 Q. So even though your adjustment was based on
- 4 information through August 2009, updated information, you're
- 5 referring to that as an adjustment and not an update; is that
- 6 right?
- 7 A. I think in that particular case that we looked at
- 8 what the Company projected in their adjustment in the rate case.
- 9 And looking at the projection, we didn't think that it was
- 10 reasonable, and therefore looked to more current information in
- 11 making our adjustment.
- 12 Q. And that information, just to be clear, was
- 13 information that was -- became available several months after
- 14 the Company filed its case?
- 15 A. I believe that is the case.
- 16 Q. So certainly some people would refer to that as an
- 17 update, wouldn't they?
- 18 A. That is possible.
- 19 Q. Now, the Office also proposed to decrease pension
- 20 expense based upon a report dealing with 2009 actual
- 21 information, correct?
- 22 A. Yes.
- Q. And then the Company also -- and that -- let me just
- 24 say that decreased the revenue requirement in this case by
- 25 approximately 1.3 million. Does that sound right?

- 1 A. That -- that sounds about right, yes.
- Q. And then when the Company proposed to use that
- 3 update to also update its 2010 forecast, the Office disagreed
- 4 with that part of the update and only agreed to use of the 2009
- 5 report, but not the projected 2010 numbers, correct?
- 6 A. I think you're getting a little beyond where I'm
- 7 comfortable going with this testimony. I wasn't the witness in
- 8 that case -- or on those issues, excuse me.
- 9 Q. All right. Well, I was just trying to follow up on
- 10 your position that you needed to take all elements of the rate
- 11 case, take into consideration all of them and how they function
- 12 together. And wouldn't you agree that it's a mismatch to
- 13 decrease the Company's general revenue requirement for updates,
- 14 but not allow increases to net power costs for those same kind
- 15 of updates?
- 16 A. Could you repeat that?
- Q. Wouldn't you agree that it's a mismatch to allow
- 18 updates that decrease the Company's general revenue requirement,
- 19 but then disallow such updates in the net power cost area that
- 20 might increase the revenue requirement?
- 21 A. I -- I wouldn't agree to that. I -- I would have to
- 22 know more about the specifics and I'd have to have a -- be able
- 23 to make some comparison as to the items you're talking about.
- 24 Here today I -- I could not say that.
- 25 Q. Well, wouldn't you agree, in concept, that if you're

- 1 concerned about the matching principle, then you can't just draw
- 2 a line around net power cost and say this can't be updated, but
- 3 all other parts of the case can be?
- 4 A. Well, I think that if we were going down the road of
- 5 updates, a rulemaking might be the more appropriate place to
- 6 discuss what could and could not be updated. And that's why we
- 7 have suggested it.
- 8 Q. And I take it that would be a comprehensive
- 9 rulemaking, looking at both?
- 10 A. Actually, my testimony was intended to go only
- 11 toward net power costs. The Commission certainly has the option
- 12 of going wherever they want with the rulemaking.
- 13 Q. Now, you'd agree, Ms. Murray, wouldn't you, that if
- 14 the Commission adopted the Company's proposed ECAM, that would
- 15 largely eliminate this issue with respect to net power costs,
- 16 wouldn't it?
- 17 MR. PROCTOR: Objection. It's irrelevant to her
- 18 testimony, number one, so it's beyond the scope of her direct.
- 19 CHAIRMAN BOYER: Yeah, I'm going to sustain that.
- 20 Q. (By Ms. McDowell) Ms. Murray, have you reviewed
- 21 Mr. Duvall's rebuttal testimony, the pages where he has actually
- 22 outlined the updates and adjustments that he proposes to include
- 23 in the rebuttal?
- 24 A. I have.
- 25 Q. And does -- is it the Office's position that every

- 1 one of those adjustments should be rejected?
- A. If it's an update, yes. But not just the Company's
- 3 updates. We're saying every update in the net power cost should
- 4 be rejected in this case.
- 5 Q. So basically everything listed on pages 6 and 7 of
- 6 Mr. Duvall's testimony you would say should not be incorporated?
- 7 A. I would have to specifically look at --
- 8 Q. Do you have that testimony before you?
- 9 A. -- those items?
- 10 Q. It begins on line 6 -- or excuse me, line 124 on
- 11 page 6.
- 12 A. I guess I don't know specifically about every one of
- 13 them, so I would not want to answer on every single one of
- 14 those.
- 15 Q. Well, can you tell me the ones you do know about?
- 16 A. Well, I would say that --
- 17 Q. Should we just go one by one? The first one is
- 18 proposed adjustments updating the in-service dates of High
- 19 Plains and McFadden Ridge.
- 20 A. And that one I'm not certain.
- 21 Q. Okay. The second one is the adjustment that Mr. --
- 22 or excuse me -- Dr. Powell just discussed.
- 23 A. And on that I would say that ad hoc adjustments are
- 24 not going to result and be symmetrical, and they are not going
- 25 to give the best result. On any of these that are updates, that

- 1 we can't be certain that all the parts have been considered,
- 2 that parties have had time to look into -- to the various
- 3 adjustments and -- or updates, and any other part that might
- 4 mesh with them or should be considered along the same lines, I
- 5 think we're not going to end up with a good result.
- 6 Q. So it sounds like you are opposed to those, the
- 7 second proposal there on the QF contracts?
- 8 A. I would say that that's an adjustment -- I mean an
- 9 update. Excuse me.
- 10 Q. And that -- just to be clear, the Office proposed
- 11 really an almost identical adjustment in the 2007 case, didn't
- 12 it?
- 13 A. We did.
- 14 Q. And the Commission accepted that?
- 15 A. Uh-huh.
- Q. Uh-huh.
- 17 A. Yes.
- 18 Q. All right. So then going to the third bullet, the
- 19 wind integration charge, that one, your -- your position is
- 20 clear, you have withdrawn --
- 21 A. We have withdrawn that, yes, because --
- Q. The proposal to update the wind integration charge?
- 23 A. Yes.
- Q. Okay. And then I take it that's also your position
- 25 on the BPA peaking, and grant purchase contract?

- 1 A. Yes.
- 2 Q. Is that -- that is an update that should be
- 3 disallowed?
- 4 A. In this case.
- 5 Q. In this case, so not necessarily in a subsequent
- 6 filing?
- 7 A. It would depend on if the Commission decided that
- 8 there should be some updates, if there were rulemaking, if
- 9 parties knew what and when they could expect certain updates,
- 10 and if the Commission determined they should be allowed prior to
- 11 the case, then that would be -- that would make a difference to
- 12 us.
- 13 Q. So then the fifth item discussed by Mr. Duvall is
- 14 the -- a proposal to reflect the most recent Mag Corp and
- 15 Kennecott contracts as a part of the adjustment proposed by the
- 16 Division to update the revenues associated with that, that
- 17 contract. Do you see that?
- 18 A. I do.
- 19 Q. And do you oppose that?
- 20 A. I would say that, again, these are adjustments that
- 21 there may be other adjustments that should have also been
- 22 included, and we don't know the full scope of everything that
- 23 might fall within the range of either the dates or the type of
- 24 adjustments, and so yes.
- Q. But, you know, not allowing that revision, wouldn't

- 1 that result in potentially the case being updated for revenues
- 2 but not being updated for additional costs? I mean, isn't the
- 3 proposal here to match the update proposed for revenues with an
- 4 update for costs?
- 5 A. Well, but that's still an ad hoc adjustment. I
- 6 mean, you're taking only one particular item, you're taking
- 7 these matching -- you're matching the contract with the
- 8 revenues. Is that what you're saying?
- 9 Q. Well, wait. The Division proposed to update the
- 10 revenue credit --
- 11 A. Right.
- 13 A. Right.
- Q. And the Company accepted that --
- 15 A. Right.
- Q. -- proposal by the DPU, but then added the updated
- 17 cost into the power cost to match the update. And I'm asking
- 18 you if you oppose that, and if --
- 19 A. Yes.
- 20 Q. -- you do -- you do. And then do you also oppose
- 21 the update to the revenues that was -- that were proposed by the
- 22 Division with respect to the Mag Corp service agreement?
- 23 A. If it's an update, we're opposing it as issue -- as
- 24 a policy issue. Just because, again, we think that these ad hoc
- 25 type of adjustments aren't going to give the best results.

- 1 Q. So the sixth adjustment is the wheeling contracts.
- 2 And I take it your position is to be opposed to that?
- 3 A. (Nods head.)
- 4 Q. And then the final adjustment listed here, you see
- 5 updates to the forward price curve proposed by UAE. And the
- 6 Office opposes that?
- 7 A. Yes.
- 8 Q. I wanted to ask you about one update that's not here
- 9 that came in the supplemental testimony, and that is the coal
- 10 cost update proposed by the Division. Does the Office oppose
- 11 that update?
- 12 A. I'm not sure that that's an update, based on the
- 13 description I heard. I'm not sure how I would -- that that
- 14 would be characterized as an update.
- 15 O. If it were based on information that was -- became
- 16 available only after the date of the filing, would that -- would
- 17 you view that then as an update?
- 18 A. Not necessarily, because I don't know the
- 19 circumstances of -- if the information should have been
- 20 included, how it should have been explained, when it should have
- 21 been explained. It seemed Mr. Evans was talking about not
- 22 getting the spreadsheets with the formulas intact. So I think
- 23 that I -- I would not have a position on whether that was an
- 24 update or not. I would just go back to our policy position that
- 25 updates in this case should not be allowed. That would...

- 1 Q. So does it provide any clarification to that
- 2 particular adjustment when you look at the data requests that
- 3 underlie the adjustments, saying please provide updated plant
- 4 coal costs reflecting current NIMEX future prices for oil, gas,
- 5 fuel, and petroleum products, along with current estimates for
- 6 inflation and escalation? So that sure sounds like the kind of
- 7 update that you are arguing should not be accepted in this case.
- 8 A. Well, I would say that not necessarily, because
- 9 sometimes we use the word "update" in a less precise manner,
- 10 perhaps. Also, if it's -- if he was getting at the Company
- 11 making a projection -- an adjustment in the case based on their
- 12 projection, and he felt that it was unreasonable or incorrect,
- 13 and he was trying to get to a more precise number, then perhaps
- 14 it wouldn't fall in that category. I don't know for sure.
- 15 MS. McDOWELL: That's all I have. Thank you, Ms.
- 16 Murray.
- 17 CHAIRMAN BOYER: Okay. Mr. Ginsberg, any questions
- 18 of Ms. Murray?
- MR. GINSBERG: Just one.
- 20 CROSS-EXAMINATION
- 21 BY MR. GINSBERG:
- Q. I take it in your answers you're trying to make a
- 23 distinction between net power cost and the rest of the revenue
- 24 requirement phase of the case?
- 25 A. In this particular testimony, I was.

- 1 Q. So if there are updates, and she went through some,
- $2\,$ and there are others, in that phase of the case those are okay,
- 3 or did you just not address it?
- 4 A. I just didn't address them, really.
- 5 Q. How is it -- how is it -- how is it consistent with
- 6 your statement then that the problem with updates is to make
- 7 this matching if you don't address updates throughout the entire
- 8 case, entire phase, net power cost? For example, the wind plant
- 9 that you referred to, I think it was one you said you weren't
- 10 sure of, you're aware that the capital costs have been updated
- 11 to what the actual costs are?
- 12 A. Yes, I think I have heard that, yes.
- 13 Q. Is that an update?
- 14 A. I'd say that's a correction. The projection was
- 15 incorrect. I mean, it could be a projection.
- 16 Q. Okay.
- 17 A. A correction of an incorrect projection.
- MR. GINSBERG: Thank you.
- 19 CHAIRMAN BOYER: Mr. Dodge, any questions?
- MR. DODGE: No questions.
- 21 CHAIRMAN BOYER: Mr. Reeder?
- 22 CROSS-EXAMINATION
- 23 BY MR. REEDER:
- Q. Were you present in the hearing room when Mr. Duvall
- 25 testified this morning?

- 1 A. I was.
- Q. Did you hear discussion about the contract with
- 3 Nevada Energy dated October 2009?
- 4 A. I did.
- 5 Q. How would you apply the Office's policy to that
- 6 potential revenue source?
- 7 A. Well, I would say that that's an update.
- 8 Q. You would exclude it?
- 9 A. I would.
- 10 MR. REEDER: Thank you. Nothing further.
- 11 CHAIRMAN BOYER: Commissioner Allen? Commissioner
- 12 Campbell? I have no questions. Redirect, Mr. Proctor?
- MR. PROCTOR: Yes, thank you, Mr. Chairman.
- 14 REDIRECT EXAMINATION
- 15 BY MR. PROCTOR:
- 16 Q. Ms. Murray, on the issue of the Nevada Power
- 17 contract, is that one of the contracts that Mr. Duvall listed in
- 18 his rebuttal testimony --
- 19 A. My --
- Q. -- as an update?
- 21 A. Sorry. My understanding is no, it is not. And that
- 22 kind of points to the problems with these ad hoc updates.
- Q. Those problems being what?
- 24 A. That the Company -- the Company has the best
- 25 foundation of knowledge of what's occurring in its case, they

- 1 know the parts that are changing. We don't always know, as
- 2 intervenors and regulatory agencies, don't always know what all
- 3 of those elements are. And so without -- without that same
- 4 degree of knowledge, it becomes very difficult to make sure that
- 5 the adjustments or the updates are symmetrical. And that's our
- 6 concern with having these ad hoc adjustments, is that it is very
- 7 difficult to get to a symmetrical level of updates.
- 8 Q. Ms. McDowell asked you a question about each of the
- 9 updates that Mr. Duvall was proposing. One of them was also the
- 10 wheeling contract, and I believe it's referred to as with
- 11 BPA/Idaho Power in Mr. Duvall's testimony. Do you remember
- 12 that?
- 13 A. I do.
- Q. Within Mr. Duvall's testimony, was there any
- 15 explanation that you recall about the nature of that increase,
- 16 its source, and the Company's position on that?
- 17 A. I don't recall.
- 18 Q. Did the Company supply the -- or did the Office
- 19 supply the Company with some data requests pertaining to that
- 20 Idaho Power contract?
- 21 A. Yes, they did.
- Q. And the rate increase that Idaho Power was
- 23 proposing?
- 24 A. Yes.
- Q. Did the Company respond?

- 1 A. They did.
- Q. Did it provide any additional explanation about the
- 3 origins of the contract increase, price increase, and the
- 4 Company's response?
- 5 A. I know they did.
- 6 Q. Well, perhaps this would help, Ms. Murray.
- 7 And I don't know how you'd want to redirect.
- 8 MS. McDOWELL: Yeah, I was about ready to say, this
- 9 is -- seems unusual on redirect for Mr. Proctor to be handing
- 10 out an exhibit.
- MR. PROCTOR: Ms. McDowell raised the issue,
- 12 Commissioners.
- MS. McDOWELL: But nevertheless, one normally
- 14 doesn't even hand out exhibits on direct, let alone redirect.
- 15 Those were all to be prefiled.
- MR. PROCTOR: I think it's certainly appropriate to
- 17 provide additional elaboration and further examination about a
- 18 matter that was raised on cross.
- 19 CHAIRMAN BOYER: We'll let -- we'll let her use this
- 20 to refresh her recollection.
- 21 Q. (By Mr. Proctor) Ms. Murray, I've handed you the
- 22 Company's data responses to OCS 26 data requests. Do you see
- 23 that before you?
- 24 A. I do.
- Q. And are you the person for the Office who is

- 1 generally responsible to both send out and receive and manage
- 2 data requests and data responses?
- 3 A. In portions of the case, yes.
- 4 Q. Would net power cost be one of those portions?
- 5 A. Yes, it would.
- 6 Q. And so the letter in fact dated December 8 was
- 7 addressed to you; is that correct?
- 8 A. Correct.
- 9 Q. Now, having seen this data response from the
- 10 Company, does that refresh your recollection with respect to the
- 11 information that the Office inquired about concerning the Idaho
- 12 Power transmission cost increase or contract increase?
- 13 A. It does.
- Q. Does this provide an explanation then that was --
- 15 that the Office utilized in considering whether or not
- 16 Mr. Duvall's testimony provided a complete explanation?
- 17 A. Yes. His testimony left out the part that the --
- 18 PacifiCorp Energy was opposing or protesting the proposed
- 19 increase, or requested increase.
- 20 Q. Was there a refund possibility also that was
- 21 disclosed in these documents?
- 22 A. Yes, there was, in the amount, I believe it was...
- 23 I'm going to get this wrong now. I'm not sure if it's this 3.7.
- 24 It was a refund, yes, it --
- 25 Q. Or at least a potential --

- 1 A. A potential refund, yes.
- 2 Q. Okay.
- 3 A. That's more accurate.
- Q. Finally, Ms. Murray, there were questions asked
- 5 pertaining to the pension adjustment that the Office had
- 6 recommended based on an additional Hewitt report. Do you recall
- 7 those questions?
- 8 A. I do.
- 9 Q. Did the -- in response to that, did the Company
- 10 provide a new projection for 2010 when it had received the
- 11 Hewitt report?
- 12 A. There were two -- there was two Hewitt reports in
- 13 here, so in the last -- if you're talking about the last one
- 14 they did, yes. But it wasn't -- my understanding is it was not
- 15 a final, there was still some work that had to be done to get to
- 16 a final answer in that Hewitt report.
- Q. Were you present during Ms. Ramas's testimony?
- 18 A. I was.
- 19 Q. And do you recall her testimony pertaining to a
- 20 table that Mr. Hickey had provided to her as an exhibit?
- A. Sort of.
- 22 Q. Well, with --
- A. With no precision.
- MR. PROCTOR: Okay. Thank you. That's all I have.
- 25 Thank you very much, Ms. Murray.

```
1
                CHAIRMAN BOYER: Okay. Thank you.
 2
                THE WITNESS: Thank you.
 3
                CHAIRMAN BOYER: Ms. Murray, you may be excused.
 4
                Okay, that I think will conclude today's hearing.
5 We'll be in recess until 9:00 tomorrow morning, at which time
6 we'll hear more testimony from Messrs. Hayet and Falkenberg.
7
   Thank you all.
