RE: Docket No. 09-035-23, Phase II Direct Testimony of Richard Collins—**CORRECTION**

Southwest Energy Efficiency Project and Utah Clean Energy hereby submit for filing the Corrected Direct Testimony of Richard Collins for Phase II of this docket (SWEEP and UCE Exhibit 1.2). The results of these calculations are slightly different than what was shown in the original Direct Testimony of Richard Collins. Because the numbers are slightly different in the corrected calculation, some of Mr. Collins testimony has changed. Attached is an Exhibit containing the correct calculations and resulting analysis.

This submission includes a redlined corrected copy of his Direct Testimony that highlights in red the corrections to his testimony and a completed copy of his Corrected Direct Testimony. Rocky Mountain Power in their Rebuttal Testimony pointed out that there was an error in the calculation of the billing determinants. The spreadsheet model that was used to calculate rates failed to include the kWh usage for customers using greater than 5000 kWh. This led to the revenue requirement being spread over fewer kWh and thus higher rates were assigned to upper tiers. The mistake has been corrected and new rates were recalculated. The resulting rates in each of the four summer tiers now correctly collect the revenue requirement assigned to the residential class. The corrected calculations of rates and usage levels change some of the tables and numbers in the testimony.

The corrected document did not change the language or conclusions of Dr. Collins' testimony or the rates for SWEEP-UCE's two winter tiers.

SWEEP and UCE will also provide an electronic version of this filing to jwatts@utah.gov.

Sincerely,

Brandy Smith
