Re: Docket No. 10-035-128 – Cool Keeper Program Malfunctioning Programmable
Thermostat

On December 22, 2010, Rocky Mountain Power (the “Company”) filed a letter with the Commission reporting a potential malfunction concern associated with the programmable thermostat offered to commercial and industrial customers through the Cool Keeper program. This matter was subsequently assigned Docket No. 10-035-128. In that filing the Company described the corrective action plan which had been developed by the thermostat manufacturer, White-Rogers, to mitigate the potential hazard caused by the malfunction. In a letter to the Commission dated September 15, 2011, the Company reported one customer with two thermostats had yet to confirm corrective action had been taken. The Company received confirmation from our contractor that the customer was reached and the thermostats received corrective action on April 4, 2012. There is no additional action required.

Please direct any inquires concerning this matter to Lisa Romney, Regulatory Projects Manager, at (801) 220-4425.

Sincerely,

Jeffrey K. Larsen
Vice President, Regulation and Government Affairs
