Subject: Docket # 11-035-200

Dear Sirs:

I have recently installed a solar electrical system for my house. With the year averaging system now in place most months my electric bill was just over \$4. With the increase granted last fall, my price increased 75%. I feel that raising the minimum bill is counter to encouraging people to convert to alternate energy. I would like to see the minimum bill eliminated and customers only charged for what they use. Rocky Mountain Power Charges full costs of Connections for new customers and the need for a minimum bill is no longer needed to offset those costs.

Thanks

Jim Blankenagel
