

1 **Q. Please state your name, business address, and present position with**  
2 **PacifiCorp dba Rocky Mountain Power (“the Company”).**

3 A. My name is Stefan A. Bird. My business address is 825 NE Multnomah St., Suite  
4 600, Portland, Oregon 97232. I am Senior Vice President, Commercial and  
5 Trading, for PacifiCorp Energy, a division of PacifiCorp.

6 **Q. Please describe your education and business background.**

7 A. I hold a B.S. in mechanical engineering from Kansas State University. I joined  
8 PacifiCorp Energy and assumed my current position in January 2007. From 2003  
9 to 2006, I served as president of CalEnergy Generation U.S., an owner and  
10 operator of Qualifying Facility and merchant generation assets, including  
11 geothermal and natural gas-fired cogeneration projects across the United States.  
12 From 1999 to 2003, I was vice president of acquisitions and development for  
13 MidAmerican Energy Holdings Company (“MEHC”). From 1989 to 1997, I held  
14 various positions at Koch Industries, Inc., including energy marketing, financial  
15 services, corporate acquisitions, project engineering and maintenance planning in  
16 the Americas and Europe.

17 In my current position I oversee the Company’s Commercial and Trading  
18 organization which is responsible for dispatch of the Company’s owned and  
19 contracted generation resources, procurement of new generation resources, and  
20 natural gas and electricity wholesale purchases and sales to balance the  
21 Company’s load and resources. I am also responsible for PacifiCorp’s load and  
22 revenue forecast, integrated resource plan (“IRP”) and net power costs modeling.  
23 Most relevant to this testimony, I oversee PacifiCorp’s hedging program.

24 **Q. Have you previously testified for the Company in regard to hedging?**

25 A. Yes. I filed testimony on hedging before the Public Service Commission of Utah  
26 in Docket Nos. 09-035-15, 10-035-124 and 11-035-200.

27 **Q. What is the purpose of your rebuttal testimony?**

28 A. My rebuttal testimony responds to the testimony of Dr. J. Robert Malko for the  
29 Utah Industrial Energy Consumers (“UIEC”) on hedging.

30 **Q. How is your testimony organized?**

31 A. I will first provide an overview of the Company’s response to Dr. Malko’s  
32 testimony. I will then address Dr. Malko’s criticisms of the Company’s hedging  
33 program. I will then explain why Dr. Malko’s claim is inconsistent with his prior  
34 positions and other prior analyses of the Company’s hedging program. Finally, I  
35 will address the proper scope of NPC at issue in this proceeding.

36 **Q. Is the Company providing additional testimony to respond to the UIEC’s**  
37 **hedging adjustment?**

38 A. Yes. Mr. Frank C. Graves from The Brattle Group has prepared independent  
39 expert testimony in this case addressing the consistency of the Company’s  
40 hedging policies with good industry practices, why liquidation of hedges would  
41 not have created an expected benefit for customers, why cost minimization should  
42 not be a central part of the Company’s hedging goals, how the Company’s  
43 hedging program was appropriately diversified, why it does not make sense to  
44 hedge natural gas and power separately, and why various analogies to other  
45 hedging and investment situations mentioned by UIEC do not demonstrate a flaw  
46 in the Company’s approach. Mr. Brian S. Dickman has prepared testimony

47 showing that Mr. Richard S. Hahn's concern about information regarding power  
48 purchases and sales, which is another basis for UIEC's proposed disallowance,  
49 has been resolved.

50 **Overview**

51 **Q. Do you have a general reaction to Dr. Malko's claim?**

52 A. Yes. Dr. Malko's claim is vague and undefined, but nonetheless results in an  
53 extraordinary recommendation to disallow 100 percent of the natural gas swap  
54 losses incurred during the fourth quarter of 2011. He claims that the Company  
55 was imprudent for not liquidating natural gas swaps, but fails to identify which or  
56 how many swaps the Company should have liquidated, how it should have  
57 liquidated them, when it should have liquidated them or whether it should have  
58 hedged again at lower prices upon liquidating them. He provides no evidence that  
59 liquidating the swaps would have created an expected reduction in net power  
60 costs ("NPC") or what impact the liquidation would have had on compliance with  
61 the Company's risk management policies or practices. Despite these specious  
62 claims, he recommends that 100 percent of the losses incurred on natural gas  
63 swaps that settled during the fourth quarter of 2011 be disallowed. This is the  
64 same as saying the Company should have predicted the fall in natural gas prices  
65 and should not have hedged any portion of its forecast natural gas requirements  
66 for the Energy Balancing Account ("EBA") period, leaving customers entirely at  
67 risk for the full amount of its natural gas requirements.

68 Dr. Malko's claim lacks any basis in sound risk management theory and is  
69 based on an improper view of the purpose of hedging. His view that cost

70 minimization should be a goal of hedging would require that hedging be  
71 undertaken based on speculation about the future price of natural gas. An  
72 underlying premise of his position is the hindsight knowledge that natural gas  
73 prices have declined over the period from 2008 to the present. While he pays lip  
74 service to the concept that prudence cannot be determined based on hindsight, he  
75 fails to review what was known when the Company entered into the hedges and  
76 what was known at each time the Company might have considered liquidating the  
77 swaps had it been willing to adopt his unique and unorthodox approach to risk  
78 management. He completely ignores the fact that forward market prices for  
79 natural gas were always rising during this period, third party experts forecast the  
80 risk of much higher prices than then current forward prices throughout this period  
81 and his strategy would have resulted in much greater NPC had natural gas prices  
82 increased. Thus, his underlying premise is entirely based on hindsight.

83 Finally, Dr. Malko's suggestion that the Company should have seen the  
84 signs and acted on them is clear evidence that he believes the Company should  
85 speculate in the market. He attempts to analogize actions that might be taken with  
86 respect to investments with actions that he believes should have been taken in  
87 hedging. Beyond the fact that his examples are incorrectly stated or inapplicable,  
88 they would have involved speculation if undertaken as he suggests they were. The  
89 Company does not speculate about the future prices of natural gas or electricity  
90 for the purpose of attempting to make trading profits. Doing so would be patently  
91 imprudent. The sole purpose of the Company's hedging program is to reduce  
92 customer risk exposure to volatility that is inherent in its supply portfolio.

93 **Q. Are there other problems with Dr. Malko's claim?**

94 A. Yes. As I will explain in greater detail later in this testimony, in addition to the  
95 fact that all of his claims are unsupported by any evidence or sound risk  
96 management theory, his claims and recommendation to disallow 100 percent of  
97 all natural gas swap losses is inconsistent with the EBA statute and tariff and goes  
98 well beyond the change in natural gas swap value from base rates to actuals,  
99 violates stipulations entered into by UIEC and is inconsistent with his own prior  
100 testimony and positions on hedging..

101 **Q. In summary, what do you conclude regarding Dr. Malko's claim based on**  
102 **this overview?**

103 A. Dr. Malko's claim is inconsistent with sound risk management practice, is not  
104 supported by any evidence and is inconsistent with his own prior positions and  
105 recommendations of independent experts in this case and prior general rate cases.  
106 It should be rejected entirely by the Commission.

107 **Response to the UIEC's Proposed Hedging Adjustment**

108 **Q. What does Dr. Malko suggest with regard to the Company's hedges in this**  
109 **case?**

110 A. He suggests that the Company's hedging program should have included a cost  
111 minimization component, that the Company did not adequately diversify its hedge  
112 products, and that the Company was not sufficiently flexible in the execution of  
113 its hedge program. Although his claims are vague, he apparently believes the  
114 Company was not flexible because it did not liquidate natural gas swaps when  
115 they were out of the money. He also claims that the Company did not follow its

116 own risk management policies and should hedge natural gas independently from  
117 power. He also claims that the Company's failure to liquidate out-of-the-money  
118 gas swaps is inconsistent with conduct of others that he alleges was taken in  
119 response to falling gas prices. Based on these supposed flaws in the Company's  
120 hedging program, he ultimately concludes that 100 percent of the \$23.8 million of  
121 the Company's natural gas swap hedge losses incurred during the fourth quarter  
122 of 2011 and the entire variance in short term power purchases and sales should be  
123 disallowed from the EBA.

124 **Q. Should the Company's hedge program be designed to minimize NPC?**

125 A. No.

126 **Q. What is the purpose of hedging?**

127 A. The purpose is to reduce NPC volatility to the Company's customers. The  
128 purpose is not to reduce or minimize NPC. The Company cannot predict the  
129 direction or sustainability of changes in forward prices. Therefore, the Company  
130 hedges, in the forward market, to reduce the volatility of NPC consistent with  
131 good industry practice as documented in the Company's risk management policy.

132 **Q. How does the Company minimize NPC?**

133 A. First, we engage in integrated resource planning to plan resource acquisitions that  
134 are anticipated to provide the lowest cost resources to our customers in the long-  
135 run. In addition, in acquiring specific major resources, we participate in  
136 competitive requests for proposals to assure that the resources we acquire are the  
137 lowest cost resources available on a risk adjusted basis.

138           In operations, we maintain and operate a portfolio of assets that diversify  
139 customer exposure to fuel, power market and emissions risk and utilize an  
140 extensive transmission network that provides access to markets across the western  
141 United States. Independent of any natural gas and electric price hedging activity,  
142 to provide reliable supply and minimize net power costs for customers we commit  
143 generation units daily and dispatch in real time all economic generation resources  
144 and all must-take contract resources, serve retail load and then sell any excess  
145 generation to generate wholesale revenue to reduce NPC for customers. We also  
146 purchase power when it is less expensive to purchase power than to generate  
147 power from our owned and contracted resources.

148 **Q. How does Dr. Malko suggest the Company should minimize costs in its**  
149 **hedging program?**

150 A. He does not indicate or suggest how cost minimization can be incorporated into a  
151 hedge strategy. However he states “Not considering cost minimization as an  
152 important objective in a hedging strategy violates principles of economic  
153 regulation and related efficiency concerns.” (Malko Direct ll. 189-191)

154 **Q. Does Dr. Malko claim that the Division of Public Utilities (“Division”)**  
155 **believes cost minimization should be part of a hedge strategy?**

156 A. Yes. Dr. Malko refers to testimony of a Division witness filed in Docket No. 10-  
157 035-124 in May of 2011 that criticized the Company’s hedging program because  
158 it did not appear to consider cost minimization. (Malko Direct ll. 193-217)

159 **Q. Does the Division continue to suggest cost minimization should be included as**  
160 **part of the Company’s hedge strategy?**

161 A. No. Following the extensive collaborative process that resulted from a stipulation  
162 in Docket No. 10-035-124 and other cases (“2011 Stipulation”), the Division’s  
163 report acknowledges “the purpose of price hedging and its associated metrics  
164 (including TEVaR) is to reduce price volatility rather than to achieve cost  
165 minimization.”<sup>1</sup>

166 **Q. Does Mr. Graves’ testimony address whether cost minimization should be**  
167 **part of a hedge strategy?**

168 A. Yes. He explains that cost minimization has nothing to do with risk management  
169 and that the Company’s risk policies, analytic methods, and controls are  
170 sophisticated, well-developed, and aptly suited to monitoring and managing  
171 natural gas and power cost risks over time. He adds that properly understood and  
172 practiced, risk management is about controlling the potential width (and shape)  
173 but not about improving (reducing) the mean of the distribution of future costs (or  
174 increasing revenues) and, conversely, you cannot expect to reduce your future  
175 costs by not hedging.

176 **Q. What does Dr. Malko suggest regarding diversifying hedge products?**

177 A. He states “By not developing a separate or internal diversification strategy for  
178 natural gas hedging, the Company managers have not actively changed strategies  
179 in response to significant business risk changes such as substantial falling natural  
180 gas prices.” (Malko Direct ll. 453-455)

---

<sup>1</sup> Collaborative Process to Discuss Appropriate Changes to PacifiCorp’s Hedging Practices, Report to the Utah Public Service Commission, Submitted by Utah Division of Public Utilities, Docket No. 10-035-124 (Utah PSC March 30, 2012) (“Division Report”) at 8.

181 **Q. Does Dr. Malko make clear what he means by diversification?**

182 A. Again, Dr. Malko is vague. However, he apparently believes the Company should  
183 have used options instead of swaps in anticipation of declining natural gas prices.

184 **Q. Why did the Company not use options instead of swaps?**

185 A. As the Company explained in several prior dockets and in the collaborative  
186 workshops, options are not as readily available in the market and are generally  
187 more expensive means of hedging than swaps due to this limited liquidity. While  
188 the Company is willing to consider the use of options in hedging, there needs to  
189 be some consensus on how their costs will be treated if they are not exercised. For  
190 example, as Mr. Graves explains in his testimony, had the Company been able to  
191 prior to the Stipulation and did purchase call options for natural gas to be settled  
192 in 2011, they would have not have been exercised due to the subsequent decrease  
193 in prices and the Company would still have incurred the cost associated with  
194 obtaining the options.

195 Prior to the Stipulation, when the Company entered into the swaps that  
196 settled in a loss position in the fourth quarter of 2011, the Company's risk  
197 management practice did not generally include use of options. Notwithstanding  
198 this fact, the Company's policy and practices were found to be sound and  
199 compliant with industry standards. In 2009, the Division retained an outside  
200 consultant, Blue Ridge Consulting Services, Inc. ("Blue Ridge"), to review the  
201 Company's NPC, including its risk management program. In its report in Docket  
202 No. 09-035-23, the Company's 2009 general rate case, Blue Ridge stated:

203 . . . Division Staff requested that we provide an assessment of how  
204 the Company's hedging policies compare to those employed in other states

205 or jurisdictions where Blue Ridge has had experience reviewing such  
206 policies or where we are aware of the decisions made by other  
207 jurisdictions concerning the use of hedging and the impacts on an energy  
208 cost recovery mechanism.

209 . . . .

210 Overall, Blue Ridge found that the Company's commercial  
211 trading and risk management programs (and the related hedging  
212 programs) are well-documented and controlled and adhere to generally  
213 accepted standards found elsewhere in the industry. The Company has  
214 well-stated goals and strategy that is aimed at mitigating price volatility.  
215 In addition, our review of the Company's internal documents showed  
216 that the Company is self-monitoring compliance with accepted  
217 commercial trading and risk management procedures through its own  
218 internal audit function.<sup>2</sup>

219 **Q. What does Dr. Malko state with regard to his criticism that the Company's**  
220 **hedge program was not sufficiently flexible?**

221 A. He states, "Central or critical to the investment management process is selecting  
222 what to purchase and when to purchase, and deciding what to sell and when to  
223 sell." (Malko Direct II. 289-291)

224 **Q. Does Dr. Malko point the Commission to any specific hedges that should**  
225 **have been liquidated, or ever describe what "portion" of the Company's**  
226 **positions should have been liquidated?**

227 A. No.

228 **Q. Does Dr. Malko identify for the Commission examples of other large utilities**  
229 **that liquidated natural gas positions during the decline in natural gas prices?**

230 A. No.

---

<sup>2</sup> Independent Third-Party Evaluation of Net Power Cost Evaluation Rocky Mountain Power 2009 General Rate Case, Prepared for Utah Division of Public Utilities, Prepared by Blue Ridge Consulting Services, Inc, Docket No. 09-035-23 (Utah PSC October 7, 2009) at 2.

231 **Q. Does Dr. Malko say exactly when the Company should have liquidated “a**  
232 **portion” of its portfolio?**

233 A. No. He states “A prudent manager should have actively monitored the situation,  
234 taken note of the signs, and taken some kind of action in order to address and  
235 balance the objectives of price stability and cost minimization.” (Malko Direct II.  
236 300-303)

237 **Q. Does Dr. Malko ever define what he believes constitutes “some kind of**  
238 **action” in hedging practice?**

239 A. Not specifically, but apparently he is referring to liquidation of hedges that are out  
240 of the money.

241 **Q. Do you know whether it is standard utility practice to liquidate a hedged**  
242 **position once a forward price curve places the hedged position out of the**  
243 **money?**

244 A. As discussed by Mr. Graves, it is actually *contrary* to standard practice to do so  
245 and would create increased risk if a utility followed this policy. Therefore, Dr.  
246 Malko’s suggestion that we should sell hedges when they fall out of the money  
247 violates his own definition of good utility practice and prudence because it would  
248 be contrary to standard utility practice.

249 **Q. With regard to Dr. Malko’s criticism that the Company does not follow its**  
250 **own risk management policies, does the Company have a policy on hedging**  
251 **that it follows or are hedging decisions made on an ad hoc basis?**

252 A. The Company has a formal policy. The goals of the Company’s risk management  
253 policy and hedging program are to: (1) ensure that reliable power is available to

254 serve customers; (2) reduce net power cost volatility; and (3) protect customers  
255 from significant risks. The Company's risk management policy and hedging  
256 program were designed to follow electric industry best practices and are  
257 periodically reviewed and updated as necessary.

258 **Q. How is the Company's hedging program structured?**

259 A. Since 2003, the Company's hedge program has employed a portfolio approach of  
260 dollar cost averaging to progressively reduce net power cost risk exposure over a  
261 defined time horizon while adhering to best practice risk management governance  
262 and guidelines.

263 **Q. What is "dollar cost averaging"?**

264 A. This is the term used to describe gradually hedging over a period of time rather  
265 than all at once.

266 **Q. How does Dr. Malko claim the Company violated its hedging policy in this  
267 case?**

268 A. Dr. Malko bases this claim on misconstruing the Company's policies. For  
269 example, he cites a statement in Risk Management Oversight Committee minutes  
270 regarding flexibility, and then proceeds to assume that failure to liquidate out-of-  
271 the-market hedges failed to comply with that statement. When read properly in  
272 context, the statement in the minutes suggested that the Company should be  
273 willing to consider revision of strategy or risk management policy, such as  
274 changes in the length of hedges and the percentage of anticipated supply hedged.  
275 In fact, these were the types of changes to policy that were made as a result of the  
276 hedging collaborative workshop that took place during the EBA period and

277 concluded in the first quarter of 2012. The statement clearly did not imply that the  
278 Company should be flexible through undertaking unsound risk management  
279 practices such as liquidation of out of the money hedges to lock in losses and  
280 expose customers to further price volatility.

281 Dr. Malko also misinterprets a statement from the Company's semi-annual  
282 hedging report regarding balancing risk management with low cost. The statement  
283 refers to using dollar cost averaging, not to attempting to minimize net power  
284 costs through hedging. As Dr. Malko is well aware, the Company has consistently  
285 maintained that hedging cannot be used to minimize net power costs.

286 Finally, Dr. Malko suggests that the Company may have failed to follow  
287 its own policies when it failed to diversify its hedging portfolio. He notes that he  
288 is not providing an opinion on whether the hedging portfolio was comprised too  
289 much of financial products relative to fixed price physical transactions. (Malko  
290 Direct II. 531-533) Such a claim would be clearly barred by the 2011 Stipulation  
291 to which UIEC agreed and which I will discuss further below. So instead, he  
292 refers to the fact that the risk management policies permit hedging with options  
293 and other financial products. However, he points to no aspect of the Company's  
294 risk management policies and practices that would have required the Company to  
295 employ greater use of options or other financial products with their resulting  
296 greater hedging costs. Therefore, again he has not provided any evidence that the  
297 Company did not act in accordance with its risk management policies.

298 **Q. Did the Company comply with its risk management policies?**

299 A. Yes, and Dr. Malko has not cited any action of the Company that was not in  
300 compliance with its risk management policies.

301 **Q. Please describe the collaborative and 2011 Stipulation you referenced above.**

302 A. Consistent with an order issued by the Commission on September 13, 2011 in  
303 Docket No. 10-035-124 approving a stipulation in several cases, the Company  
304 and interested parties engaged in a hedging collaborative which included several  
305 meetings over several months after which the Company agreed to modify its  
306 hedging program going forward.

307 In addition, the 2011 Stipulation stated:

308 The Company represents that its current natural gas hedged  
309 position as a percent of the Company's forecast gas  
310 requirement for the period of August 2012 through July  
311 2013 using instruments comparable to the hedge  
312 transactions reviewed in the General Rate Case is the  
313 percent disclosed on a highly confidential basis to the  
314 Parties during a settlement meeting on July 27, 2011. The  
315 Parties agree, based on such representation and in  
316 consideration of the Company's compromises reached in  
317 this Stipulation, that hedging transactions entered into  
318 before July 28, 2011 will not be challenged for prudence on  
319 the grounds that they:

- 320 a. Do not comply with the policy changes implemented  
321 through the Collaborative Process, Commission order  
322 or as a result of this Stipulation;  
323 b. Result in over-hedging of natural gas or power  
324 positions;  
325 c. Were entered into for a period of time beyond a  
326 reasonable horizon for hedging transactions; or  
327 d. Were comprised of too great a portion of financial  
328 products relative to fixed price physical transactions.

329 **Q. Were the natural gas swaps that settled for a loss during the fourth quarter**  
330 **of 2011 entered into prior to July 28, 2011?**

331 A. Yes. The vast majority of the natural gas swap losses were related to transactions  
332 done prior to July 28, 2011.

333 **Q. Did the Company enter into any new natural gas hedges settling in the fourth**  
334 **quarter of 2011 subsequent to July 28, 2011?**

335 A. Yes. [REDACTED]  
336 [REDACTED]. These [REDACTED] swaps settled for [REDACTED]  
337 [REDACTED] on a Utah-allocated basis during the EBA  
338 period.

339 **Q. Did the Company [REDACTED] any natural gas swaps that settled during the EBA**  
340 **period that it entered into subsequent to July 28, 2011?**

341 A. Yes. [REDACTED]  
342 [REDACTED] on a  
343 Utah-allocated basis.

344 **Q. Did the Company [REDACTED] any natural gas swaps during the EBA period that it**  
345 **entered into prior to July 28, 2011?**

346 A. Yes. The Company [REDACTED]  
347 [REDACTED] on a  
348 Utah-allocated basis.

349 **Q. Did the Company [REDACTED] the natural gas swaps as a result of [REDACTED]**  
350 **[REDACTED]?**

351 A. No. The [REDACTED] were a direct result of a change in the Company's forecast needs  
352 for natural gas to fuel its generating plants. These requirements were [REDACTED]  
353 resulting in the Company [REDACTED]. Therefore,  
354 the Company [REDACTED] these natural gas swaps.

355 **Q. What, in simple terms, is your understanding of Dr. Malko's suggestion**  
356 **regarding management of the Company's hedges?**

357 A. He essentially asks us to have liquidated some undisclosed portion of our  
358 positions so we could then speculate on when the market would bottom out and  
359 (presumably) re-hedge at that point or some later yet undefined point in time. He  
360 disregards the fact that any liquidated hedge would lock in a loss and further,  
361 given his recommendation to disallow 100 percent of all natural gas hedge losses,  
362 he apparently expects that any subsequent hedge entered into by the Company  
363 would be made with such prescient knowledge of future prices such that they  
364 would never incur a loss.

365 **Q. Is speculating on the bottom of the market good risk management practice?**

366 A. No.

367 **Q. Does Dr. Malko explain his statement that the Company should have "taken**  
368 **note of the signs" of changing market conditions impacting prices and**  
369 **reacted?**

370 A. No.

371 **Q. Were there signs that the Company should have taken note that would**  
372 **support the actions recommended by Dr. Malko?**

373 A. No. The Company's actions were based on knowledge it had *at the time* it made  
374 hedging decisions. Mr. Frank Graves' testimony also discusses information  
375 available to the Company and concludes there was no market indication or  
376 sentiment remotely confirming Dr. Malko's view that there were signs of a likely  
377 decline of the experienced magnitude. The knowledge the Company based its  
378 decisions on were the *then current* natural gas forward market prices as well as  
379 spot price forecasts and risk assessments based on fundamentals provided by  
380 well-known and respected third party services. The Company did not and does not  
381 have the prescient ability to forecast future wholesale natural gas market  
382 settlement prices. Selling hedges as recommended by Dr. Malko based on  
383 speculation that prices would continue to decline would have resulted in locking  
384 in a loss for customers, increasing transaction costs, and increasing customer  
385 exposure well outside of the allowed range in the then current hedging policy, and  
386 increasing customer exposure well outside the allowed range in the collaborative  
387 guidelines that were subsequently developed during the EBA period through the  
388 first quarter of 2012.

389 **Q. Does Dr. Malko address the inability of a utility to predict future markets?**

390 A. No.

391 **Q. Dr. Malko attempts to separate natural gas hedges from electricity hedges.**  
392 **He claims that if an investor has one stock performing well in a portfolio that**  
393 **has no impact on a decision to sell a poor-performing stock. Does his analogy**  
394 **apply to the Company's natural gas-electricity hedge dynamic?**

395 A. No. That analogy is not applicable to the NPC exposure that the Company  
396 manages on behalf of its customers. Natural gas and power show strong  
397 correlation in wholesale prices. This is not only demonstrated by the data, it is  
398 intuitive. Natural gas generation continues to occupy an increasingly greater share  
399 of U.S. electricity supply and is often the generation resource on the margin,  
400 thereby directly influencing the wholesale market price for power. Consistent  
401 with current best practices, the Company's robust risk management process  
402 incorporates daily updates from third party sources for natural gas and power  
403 correlations and volatility as well as updates to forward market prices and  
404 produces daily updates of forecast requirements, hedge positions and risk metrics.

405 **Q. Have the Company's customers benefited from offsetting power and natural**  
406 **gas positions?**

407 A. Yes. The Company has a short natural gas position and on average a long electric  
408 power position. As I just mentioned, power and natural gas prices are closely  
409 related because natural gas is often the fuel on the margin in efficient dispatch, as  
410 is practiced throughout the western U.S. This means power sales tend to be more  
411 valuable in periods when natural gas is high cost, producing revenues that are a  
412 credit or offset to the high cost fuel. If spot natural gas prices depart from prior

413 forward prices, power prices will tend to do so in the same direction, thereby  
414 naturally hedging some of the unexpected cost variance.

415 Confidential Figure SAB-1 below is a graph of the net value of  
416 PacifiCorp's hedge losses and gains for natural gas and power by month over the  
417 past few years. There is an obvious and strong pattern of the two moving opposite  
418 to each other, whether natural gas costs are high or low. As a result, the net hedge  
419 losses and gains of the two commodities has been lower than and is less volatile  
420 than the loss or gain in either individual commodity.

421 The same pattern is evident from a chart of the cumulative net value of  
422 PacifiCorp's hedge gains and losses for natural gas and power, where it becomes  
423 clear that the cumulative net energy hedge loss / gain is much less than either the

424 natural gas or power losses and gains. This is shown in Confidential Figure SAB -  
425 2 below.

426 **Q. Dr. Malko also claims that the Company’s decision to convert Naughton 3 to**  
427 **a natural gas fired unit demonstrates the Company’s certainty that natural**  
428 **gas prices will remain low for the indefinite future. Was the decision to**  
429 **convert Naughton 3 to natural gas based on the Company’s view of**  
430 **indefinitely low natural gas prices?**

431 A. Natural gas price forecasts are one of *many* factors that went into the Naughton 3  
432 decision. The decision was based on a robust risk assessment of the forward  
433 natural gas and wholesale electricity markets including then current forward price  
434 curves for natural gas and electricity, long-term third party forecasts of a range of  
435 potential future natural gas prices, potential carbon prices, the useful life of the

436 asset, the cost of the environmental retrofit versus cost of conversion to burning  
437 natural gas, and the cost of replacement energy among other items. Therefore, Dr.  
438 Malko's comments are incomplete, at best.

439 **Q. Does the Company's hedge program rely on a long power position?**

440 A. No. However, the Company's hedge program takes into account the Company's  
441 full portfolio and utilizes continuously updated correlations of natural gas and  
442 power prices and thereby takes advantage of offsetting natural gas and power  
443 positions in circumstances when prices are correlated and a forecast long power  
444 position offsets a forecast short natural gas position. This has the effect of  
445 reducing the amount of natural gas hedging that the Company would otherwise  
446 pursue. Ignoring this correlation as Dr. Malko suggests would instead result in the  
447 need for more natural gas hedges to achieve the same level of customer risk  
448 reduction.

449 **Q. Dr. Malko also claims that an approximate \$1 billion write down by**  
450 **Berkshire Hathaway is evidence that "others took action" during the time he**  
451 **claims the Company should have liquidated a "portion" of its hedges. Is his**  
452 **analogy applicable?**

453 A. No. Dr. Malko's use of the writedown is misplaced. The fact that a company like  
454 Berkshire Hathaway took an accounting write-down in its books but *did not*  
455 *liquidate* that position is hardly relevant to the suggestion that a utility should  
456 liquidate a portion of its hedges. The example Dr. Malko provides is in reference  
457 to a Berkshire Hathaway bond investment, which is not relevant to compare to the  
458 hedging activity the Company pursues on behalf of its customers. The Company's

459 hedges do not represent an investment decision for profit. Speculative commodity  
460 trading would be an investment decision, but the Company does not engage in  
461 speculative commodity trading. The sole purpose of Company hedges is to  
462 provide price stability and protect against wildly fluctuating rates. Dr. Malko has  
463 not provided any relevant examples to support his recommendation to liquidate  
464 hedges in his testimony.

465 **Q. How do you respond to Dr. Malko’s comment “At least one would hope that**  
466 **the Company’s practice of trading in electric swaps is limited to the**  
467 **disposition of surplus owned-capacity and does not reflect trading in**  
468 **electricity; especially given the fact that with the advent of the EBA,**  
469 **customers have assumed a much greater share of this risk”? (Malko Direct**  
470 **II. 419-423)**

471 A. As noted above, the Company does not engage in speculative commodity trading,  
472 commonly referred to as proprietary trading. In other words, the Company does  
473 not buy or sell natural gas or electricity speculatively as a means of making a  
474 profit. The Company only transacts to hedge its forecast requirements to mitigate  
475 net power cost volatility to customers.

476 **Q. In summary, does Dr. Malko’s recommendation that the Commission**  
477 **disallow \$23.8 million, or 100 percent of costs related to natural gas hedge**  
478 **losses have merit?**

479 A. No. He offers no explanation as to why the Company should be penalized for  
480 losses on natural gas hedges that were prudent and in compliance with the  
481 Company’s risk management policy when entered into. Second, he also fails to

482 understand that the purpose of hedging is to provide our customers with a more  
483 stable price point. It is not intended to be an investment strategy. Third, he fails to  
484 understand the link between natural gas and power hedges and omits from his  
485 analysis the benefits derived from those hedges. Fourth, he does not address the  
486 risk our customers would face if we liquidated firm positions and became more  
487 dependent on spot market purchases. Fifth, he provides no specific instances of  
488 imprudence because he cannot say (as no one could) exactly what the Company  
489 should have liquidated, when it should have done so, and to whom it could have  
490 sold these positions and for what price. His opinion is simply after-the-fact  
491 analysis that was not available at the time any hedging decisions were made.

492 **Q. Dr. Malko states he concurs with Mr. Hahn that the substantial variance**  
493 **between forecasted net power costs and actual net power costs concerning**  
494 **short-term firm and system balance purchases and sales have not been**  
495 **adequately explained and therefore, have not been shown to be prudently**  
496 **incurred, Were adequate explanations provided to Mr. Hahn regarding the**  
497 **purpose and nature of these transactions?**

498 A. Yes. As discussed by Mr. Dickman, the Company conducted several conference  
499 calls with Mr. Hahn and at the conclusion of the last conference call Mr. Hahn  
500 stated he had a sufficient understanding of the transactions.

501 **Q. Dr. Malko goes on to state that absent an adequate explanation, it is possible**  
502 **that some or most of the substantial variance stated in Figure 4 of Mr.**  
503 **Hahn’s testimony is associated with day trading and, therefore, should not be**  
504 **recovered through the EBA. Do you agree?**

505 A. No. The short term firm and system balancing purchases and sales were all done  
506 as part of the routine Company operation to reliably serve its customers.

507 **Q. Were most of the transactions associated with “day trading”?**

508 A. No. None of the transactions were associated with speculative trading activity. As  
509 stated previously, the Company does not engage in this type of activity.

510 **Inconsistency of Dr. Malko’s Position**

511 **Q. Has Dr. Malko had a consistent view regarding hedging strategy and natural**  
512 **gas swaps in other cases before the Commission?**

513 A. No. In Docket No. 10-035-124, Dr. Malko testified both in his prefiled direct  
514 testimony and again in his surrebuttal testimony that a “prudent” strategy would  
515 have been for the Company to have one-third (33%) of its portfolio exposed to the  
516 market, i.e., that 33% of the Company’s natural gas requirements should be  
517 purchased at market.<sup>3</sup> In other words, Dr. Malko believed it prudent that 67% of  
518 the Company’s natural gas requirements should remain hedged.

519 **Q. What was UIEC’s ensuing recommendation to the Commission in that case?**

520 A. Dr. Malko concluded that, as a result of the Company’s lack of exposure to the  
521 market to the extent of 33 percent, there should be a disallowance of 33 percent of

---

<sup>3</sup> Direct Testimony of J. Robert Malko, Docket No. 10-035-124 (Utah PSC May 26, 2011) page 31, line 656; Surrebuttal Testimony of J. Robert Malko, Docket No. 10-035-124 (Utah PSC July 19, 2011) page 6, lines 19-21,.

522 the Company's NPC related to the Company's natural gas swaps.<sup>4</sup>

523 **Q. What was UIEC's recommendation regarding this same issue in Docket**  
524 **No. 11-035-200?**

525 A. In Docket No. 11-035-200, Dr. Malko recommended that the Commission  
526 disallow approximately fifty percent (50%) of the Company's NPC attributed to  
527 natural gas swap losses.<sup>5</sup>

528 **Q. What is UIEC's recommendation regarding this same issue in this docket?**

529 A. Here Dr. Malko is recommending that the Commission disallow one hundred  
530 percent (100%) of NPC attributed to natural gas swap losses.

531 **Q. Is there an objective basis for UIEC's fluctuating positions and**  
532 **recommendations on the same issue over the course of three cases?**

533 A. No. It is clear to me, based on the foregoing history, that UIEC's arguments are  
534 arbitrary and subjective opinions that cannot be and have not been individually  
535 quantitatively or qualitatively supported by any objective standard. It is also worth  
536 noting that no other party in this case has embraced UIEC's position. Dr. Malko  
537 does not explain the ever-changing positions he's taken on the same issue in the  
538 last three cases.

539 **Q. Did UIEC have an opportunity to address the possible liquidation of natural**  
540 **gas swaps for a forward period before the Company filed its application in**  
541 **this docket?**

542 A. Yes. As part of the 2011 Stipulation, the Company agreed to participate in  
543 hedging collaborative workshops to address a list of issues related to the

---

<sup>4</sup> *Id.*

<sup>5</sup> Direct Testimony of J. Robert Malko, Docket No. 11-035-200 (Utah PSC June 11, 2012) p. 23, lines 511-513.

544 Company's hedging strategy. Incidentally, the list of issues was compiled, in large  
545 part, by UIEC during the 2011 Stipulation negotiations. Several meetings were  
546 held related to changes to the Company's hedging strategy to take into account  
547 Utah stakeholder risk preferences. UIEC was an active participant in these  
548 meetings and never brought up any recommendation for the Company to liquidate  
549 any of its natural gas swaps.

550 **Q. Has the Company's hedging program, which governed the time during which**  
551 **the swaps UIEC is contesting were executed, been reviewed in a previous rate**  
552 **case before this Commission?**

553 A. Yes. In Docket No. 09-035-23, the Division requested that Blue Ridge review the  
554 Company's hedging program. Blue Ridge concluded that the Company's hedging  
555 program was well-documented and controlled and adhered to generally accepted  
556 standards in the industry.

557 **Q. Has the prudence of NPC including projected losses of the natural gas swaps**  
558 **in this EBA, been previously scrutinized in a general rate cases before the**  
559 **Commission?**

560 A. Yes. All but six of the swap transactions in the EBA were included in the NPC  
561 approved in Docket No. 10-035-124.

562 **Response to Claim Regarding Appropriate Scope of Costs At Issue In this Case**

563 **Q. Dr. Malko takes issue with the testimony of Mr. Hahn in which Mr. Hahn**  
564 **states that the amount at issue in this proceeding is limited to the difference**  
565 **between the base and actual energy balancing account costs (“EBAC”). Do**  
566 **you agree with Dr. Malko?**

567 A. No. Dr. Malko is incorrect for two reasons. *First*, his testimony is inconsistent  
568 with the 2011 Stipulation. *Second*, while I am not an attorney and do not purport  
569 to offer a legal opinion, it seems to me that his testimony is inconsistent with the  
570 EBA statute, the Commission’s order approving the EBA,<sup>6</sup> UIEC’s position in  
571 that proceeding and approved Tariff Schedule 94. UIEC’s position also indicates  
572 that UIEC will likely take the position in the future that is inconsistent with the  
573 Settlement Stipulation in Docket Nos. 11-035-200, 12-035-79 and 12-035-80  
574 dated August 7, 2012 (“2012 Stipulation”).

575 **Q. How is Dr. Malko’s testimony inconsistent with the 2011 Stipulation?**

576 A. In the 2011 Stipulation, UIEC (and other parties) agreed that the base NPC for the  
577 test period from July 1, 2011 through June 30, 2012, on a Utah-allocated basis,  
578 would be \$629.1 million for purposes of the EBA.<sup>7</sup> NPC was a disputed issue in  
579 that case, and UIEC and the other parties to the case agreed to the amount of NPC  
580 that would be used in setting just and reasonable rates and in establishing base  
581 NPC. The deferral period under review in the current docket is part of the rate-  
582 effective period for the 2011 General Rate Case that was settled by the 2011

---

<sup>6</sup> *In the Matter of the Application of Rocky Mountain Power for Approval of its Proposed Energy Cost Adjustment Mechanism*, Docket No. 09-035-15, Report and Order, March 2, 2011 (“EBA Order”).

<sup>7</sup> See 2011 Stipulation at ¶ 45.

583 Stipulation. Now, through Dr. Malko’s testimony, UIEC is attempting to alter the  
584 base NPC it agreed and the Commission determined were just and reasonable.

585 **Q. Is Dr. Malko challenging base NPC or just addressing the EBA?**

586 A. Dr. Malko is challenging base NPC. As shown in Schedule 94 of the Company’s  
587 Tariff, the EBA is defined as the Actual Energy Balancing Account Costs (the  
588 actual net costs incurred by the Company in providing power) *minus* the Base  
589 Energy Balancing Account Costs (the net costs “approved by the Commission in  
590 the most recent Utah general rate case . . .”).<sup>8</sup> Through Dr. Malko’s testimony,  
591 UIEC challenges the prudence of costs associated with the Company’s hedging  
592 transactions. These hedging transactions have already been approved by the  
593 Commission in “the most recent Utah general rate case,” in accordance with the  
594 2011 Stipulation. By challenging the prudence of the Company’s hedging  
595 positions, Dr. Malko is inappropriately trying to re-set base NPC. The only proper  
596 subject before the Commission in this EBA case is whether the difference  
597 between actual and base costs for fuel, purchasing power, and wheeling, i.e., the  
598 balance in the EBA, was properly incurred during the EBA period. Any  
599 arguments related to and affecting base NPC should have been made during the  
600 general rate case.

601 **Q. Are there any other ways in which Dr. Malko’s testimony is inconsistent with**  
602 **the 2011 Stipulation?**

603 A. Yes. The Company’s hedging practices, and particularly its use of gas swaps, was  
604 a significant disputed issue in Docket Nos. 09-035-15 and 10-035-124. The 2011  
605 Stipulation resolved the issue. As discussed above, in the 2011 Stipulation, the

---

<sup>8</sup> See P.S.C.U. No. 49, Original Sheet Nos. 94.2 and 94.7.

606 parties agreed that they would not challenge hedging transactions entered into  
607 before July 28, 2011 on the grounds that they “[r]esult in over-hedging of natural  
608 gas or power positions; [w]ere entered into for a period of time beyond a  
609 reasonable horizon for hedging transactions; or [w]ere comprised of too great a  
610 portion of financial products relative to fixed price physical transactions.”<sup>9</sup>

611 With respect to natural gas swaps, the parties further agreed “not to  
612 challenge the prudence of existing financial hedge transactions, including swaps,  
613 entered into before July 28, 2011” for the same reasons.<sup>10</sup> As explained above,  
614 Dr. Malko’s testimony challenges the prudence of the Company’s natural gas  
615 swaps entered into prior to July 28, 2011.

616 **Q. In Dr. Malko’s testimony, he acknowledges the limitations imposed by the**  
617 **2011 Stipulation and characterizes his challenges as being different.<sup>11</sup> What**  
618 **is your response to that testimony?**

619 A. Dr. Malko is simply trying to avoid the 2011 Stipulation through semantics. The  
620 challenges he lists in his testimony are that the Company hedged without  
621 sufficiently considering cost minimization, held its swaps too long such that it  
622 incurred unneeded losses, invested too heavily in swaps, and maintained its swaps  
623 despite a misconstrued representation of the Company’s risk oversight committee  
624 minutes to remain “flexible.”<sup>12</sup> However, in discussing each of these grounds, Dr.  
625 Malko always ends with the same conclusion: the Company was allegedly  
626 imprudent because it hedged too heavily through use of gas swaps for too long a

---

<sup>9</sup> 2011 Stipulation at ¶ 54.

<sup>10</sup> *Id.* at ¶ 56.

<sup>11</sup> *See* Malko Direct at ll. 153-177.

<sup>12</sup> *See* Malko Direct at ll. 173-74.

627 period. This is the argument that UIEC agreed it would not make in the 2011  
628 Stipulation.<sup>13</sup> Thus, the challenge UIEC is making through Dr. Malko's testimony  
629 is inconsistent with the 2011 Stipulation.

630 **Q. Has UIEC and its witness Dr. Malko filed testimony in other rate cases that**  
631 **is inconsistent with the 2011 Stipulation?**

632 A. Yes. In the 2012 General Rate Case, UIEC filed testimony in which Dr. Malko  
633 made essentially the same claims he has made in this case, however with an  
634 inconsistent disallowance recommendation, arguing that the Company's NPC  
635 were imprudent because of losses associated with gas swaps. In his testimony in  
636 that case he argued that the Company was imprudent for failing to liquidate swaps  
637 when the market price of natural gas declined. However, following the filing of  
638 rebuttal testimony by the Company similar to the Company's rebuttal testimony  
639 in this case, UIEC entered into the 2012 Stipulation resolving this and all other  
640 issues in the case. Despite base rates being approved by the Commission as a  
641 result of the 2012 General Rate Case, given UIEC's record of behavior, it is  
642 reasonable to expect that UIEC will similarly disregard the 2011 Stipulation and  
643 the 2012 Stipulation and seek to re-litigate these same issues in the 2012 EBA and  
644 therein create unnecessary regulatory burdens. It is therefore all the more  
645 necessary for the Commission to reject Dr. Malko's testimony in this EBA in its  
646 entirety.

---

<sup>13</sup> See 2011 Stipulation at ¶ 54 ("The Parties agree . . . that hedging transactions . . . will not be challenged for prudence on the grounds that they . . . [r]esult in over-hedging of natural gas or power positions, were entered into for a period of time beyond a reasonable horizon for hedging transactions; or were comprised of too great a portion of financial products relative to fixed price physical transactions..").

647 In sum, UIEC has challenged the prudence of the same type of hedging  
648 transactions at issue here in Dr. Malko's testimony, in the past two general rate  
649 cases. UIEC stipulated twice that it would not challenge their prudence as a party  
650 to the 2011 Stipulation and the 2012 Stipulation. Yet, it is challenging the  
651 prudence of hedging transactions a third time in this case with the same  
652 arguments. Nothing within the Company's control has changed between the past  
653 two general rate cases and now. All that has changed is that the mark-to-market  
654 value of the hedging transactions changed from the value at the time base rates  
655 were set in the 2011 General Rate Case to the value at the time the hedging  
656 transactions actually settled. Clearly, the issue is lacking in merit as it has been  
657 decided and resolved not once but twice already.

658 **Q. You also said that you believed the UIEC's challenge was contrary to the**  
659 **EBA Statute, the Commission's EBA Order, UIEC's position in the EBA**  
660 **docket and Tariff Schedule 94. Will you explain what you mean?**

661 A. Yes. The Company filed the application that initiated this docket in accordance  
662 with the Commission's EBA Order for "an annual reconciliation of the deferred  
663 account balance."<sup>14</sup> Under the EBA Statute, the Commission may only establish  
664 an EBA if it finds that the EBA is "for prudently-incurred costs; and implemented  
665 at the conclusion of a general rate case."<sup>15</sup> In addition, the statute provides that  
666 the Company "shall file a reconciliation of the energy balancing account . . . with  
667 actual costs and revenues incurred . . ."<sup>16</sup>

---

<sup>14</sup> Corrected Report and Order, Docket No. 09-035-15 (Utah PSC March 3, 2011) ("EBA Order") at 77.

<sup>15</sup> Utah Code § 54-7-13.5(2)(b).

<sup>16</sup> Utah Code Ann. § 54-7-13.5(2)(c).

668           Given this statutory language, UIEC argued before the Commission in  
669           Docket No. 09-035-15 that the *propriety* of hedging was more appropriately  
670           addressed in general rate cases where (as UIEC’s argument was characterized by  
671           the Commission), “all necessary information is available for analysis.”<sup>17</sup> The  
672           Commission, in part, agreed with UIEC and dismissed all attempts to argue about  
673           the Company’s hedging during the EBA proceeding. Responding to parties’  
674           recommendations as to the proper design of the EBA—specifically, that the  
675           Commission establish predefined or pre-approved levels of hedging, market  
676           purchases, energy efficiency programs, etc., the Commission held that such  
677           concerns should have been raised in the general rate case:

678                     [N]o party contested the inclusion in rates of these costs in  
679                     the Company’s most recent general rate case, again, an  
680                     appropriate venue for raising issues of prudence and cost  
681                     disallowance. We conclude the Company’s current  
682                     portfolio of resources, including the reliance on markets,  
683                     use of hedging instruments and wind and natural gas  
684                     resources to the degree currently employed, has been  
685                     examined in former proceedings and therefore is not the  
686                     issue in this case.<sup>18</sup>

687           Later, when addressing the proper components of the EBA, the Commission  
688           reiterated its position that concerns regarding swaps should be addressed in a  
689           general rate case:

690                     We conclude that these [swap] transactions must be  
691                     reviewed and approved in each general rate case, which is  
692                     an appropriate proceeding for determining the prudence of  
693                     Company decisions.<sup>19</sup>

---

<sup>17</sup> EBA Order at 48.

<sup>18</sup> EBA Order at 68.

<sup>19</sup> *Id.* at 72.

694                    Thus, UIEC's attempt to raise the prudence of the Company's hedging  
695 included in base EBAC in this EBA proceeding is improper. This is especially  
696 true given that UIEC raised its concerns regarding hedging in the general rate case  
697 that established base NPC, and chose to resolve those matters through stipulation.

698 **Q.    Didn't the Commission reverse itself on this particular point when it allowed**  
699 **swap transactions to be included as a component of the EBA when it**  
700 **approved the 2011 Stipulation?**

701 A.    No. For the Commission to have reversed itself it would have had to take  
702 consideration of the prudence of swap transactions out of general rate cases and it  
703 did not do that. What the Commission did is allow the Company to include swap  
704 transactions as a component in the EBA.

705 **Q.    How do you respond to Dr. Malko's suggestion that failure to adopt his**  
706 **position would allow the Company to recover imprudent costs?**

707 A.    His suggestions ignores the fact that the prudence and reasonableness of base  
708 NPC has been and will continue to be reviewed in general rate cases and the  
709 prudence of any difference between base and actual NPC will be reviewed in  
710 EBA dockets such as this one. Thus, by limiting its review in EBA dockets to the  
711 prudence of any actions that resulted in the difference between base and actual  
712 NPC, the Commission will not allow the Company to recover imprudent costs.

713                    Furthermore, acceptance of Dr. Malko's position would render the  
714 determination of prudent and just and reasonable base NPC in a general rate case  
715 meaningless. Rather than attempting to arrive at a just and reasonable projection  
716 of prudent NPC during the rate-effective period, the parties could simply pick any

717 number out of the air because the full amount of NPC incurred would be subject  
718 to prudence analysis regardless of its relationship with the base amount. This  
719 would lead to all sorts of gamesmanship in positions taken and settlements  
720 reached during a general rate case.

721 The purpose of the EBA is to track the difference between base NPC that  
722 have already been reviewed and approved for recovery through base rates by this  
723 Commission as prudent, just and reasonable, with actual NPC. That difference is  
724 what is deferred in the EBA, and what is appropriately reviewable in this case—  
725 whether the factors that led to the deviation of actual NPC from base NPC were  
726 caused by any imprudence on the Company's part. If so, it is appropriate to  
727 disallow recovery of a portion of the difference. If not, the Company should be  
728 allowed to recover the full amount of the difference consistent with the purpose of  
729 the EBA.

730 **Q. Please describe the EBA for the natural gas swaps.**

731 A. All but the six natural gas swaps described above were included and approved in  
732 the 2011 general rate case. The general rate case concluded prior to the EBA  
733 deferral period so the final settlement value of the approved swaps was not yet  
734 known. For those, the EBA captures the change in value from the mark-to-market  
735 value of the forward transaction at the time of the general rate case to the actual  
736 settled price.

737 **Q. Does any market information, such as prices, that becomes known to the**  
738 **Company after the general rate case settlement have any bearing on the**

739 **prudence of natural gas swaps in the general rate case that established base**  
740 **forecast NPC?**

741 A. No.

742 **Q. Why not?**

743 A. None of this market information is known at the time of the natural gas swaps  
744 were transacted that were within the general rate case test period and, therefore,  
745 cannot be used to determine prudence based on what is known or should be  
746 known at the time of the transactions.

747 **Q. Has the Company's hedging program and hedging transactions been**  
748 **reviewed by regulators in others states and, if so, what has been the result?**

749 A. Yes. The Company's hedging program and hedge transactions have received a  
750 high degree of scrutiny in multiple state jurisdictions. None of the Company's  
751 hedge transactions have been disallowed by any of the Company's six state  
752 commissions at any time. However, similar to Utah, the Company agreed to hold  
753 hedging collaborative workshops with interested parties in other states and in each  
754 case agreed to the same policy changes that the Company agreed to make in Utah  
755 to best reflect customer-expressed risk tolerances on a going forward basis.

756 **Q. What did the Oregon Public Utility Commission say about the Company's**  
757 **hedging program?**

758 A. The OPUC praised the Company's hedging program in its November 4, 2011  
759 Order 11-435:

760 The company's Risk Management Policy includes sound hedging goals,  
761 methodologies, and targets. Its policies and procedures were well  
762 articulated, and its specific hedging targets were made clear in advance to  
763 the company and its traders. Moreover, the company's hedging program

764 appears to be robustly designed and well documented. The company  
765 provided ample contemporaneous documentation of the policies and  
766 procedures in effect at the time the hedges were executed, including its  
767 method of identifying, measuring, and managing risk, its hedging targets,  
768 its credit policies and procedures, and its approved portfolio structures, as  
769 well as detailed procedures governing company enforcement of these  
770 policies.

771 **Q. Does this conclude your testimony?**

772 **A. Yes.**
