Gentlemen,

I urge you to deny any request by Rocky Mountain Power to increase power costs or charge fees to solar and wind power generators. If anything, incentives for the use of renewable energy sources should be increased.

We need to reduce the use of fossil fuels in energy production. These fuels are major contributors to the problems of air pollution and global warming. This is especially important in areas like the Wasatch Front where poor air quality has become a serious contributor to the degradation of the quality of life and personal health issues.

Please keep me advised, I would appreciate notification of public hearings on this issue.

Sincerely,

James P. McCormick

President
