To Whom It Should Concern,

I'm a proud BLUE SKY program member and have been for about 5 years. I believe in investing in solar and wind energy even though I know it won't provide the majority of our electrical power. We need to keep moving in the direction of alternative energy though to help prevent more contamination of our air and because it is the right direction to go. We should always encourage more investment in solar/wind energy. Pacific Corp should not be allowed to implement a surcharge for people wanting to use and invest in alternative energy. They should be give a discount on the electrical power. Allowing RMP to do this will just keep putting a damper on our future. Big money should not be allowed to control our future and our environment.

Sincerely,

Dan Hess
