I read the editorial in the Sunday issue of the Tribune, and would like to also voice my concern that we need to apply more "energy" to implementing more fossil fuel alternatives, rather than relying on coal alone which often seems to be the case! I would love to see the number of wind turbines in Utah that I see in California, Wyoming, Iowa and other states. Solar energy as well seems a viable alternative for a state that sees as much sun as we do, and has the land to dedicate to these other energy sources. I think it is time to stop debating the issue, and move forward!

Thank you,
Patti white
