I am requesting that you deny Rocky Mountain Power's rate hike request and solar net-metering surcharge of \$4.25 monthly. Rocky Mountain Power has not been honest with the public about renewables and decreasing global warming emissions. Rocky Mountain Power's energy plan has no plans to improve the grid system to a "smart" grid, such that renewable energy can be used more efficiently. Rocky Mountain Power's parent company in California buys energy from customers that have solar systems; at times some customers have no energy bill for a given month. Rocky Mountain Power claims that this type of policy that is similar to California needs legislative action. That said, Rocky Mountain Power has lobbyists, ergo can lobby legislative members just as easy as I can for better usage of renewables into a smarter grid system.

Rocky Mountain Power's energy plan discusses (as well as this current request) to build more fossil fuel power plants that would only add to our current air pollution and water pollution problems across the state. The Public Service Commission needs to demand that Rocky Mountain Power only be allow to expand the renewable energy generating capacity and be corporately responsible in decreasing global emissions.

Cindy King
