Please reject the fees proposed by Rocky Mountain Power on rooftop solar. This is a backwards policy--getting off of fossil fuels and harnessing energy from the sun is the way forward to energy independence and cleaner air. Rocky Mountain Power is using their arcane business model to stop cleaner air from occurring by targeting residential solar customers and imposing a fee. This is unfair--solar is forward-thinking and helps our state's future. More solar means cleaner air, less power plants, and less expensive infrastructure. Let us have our choice! No fees for residential solar. Energy efficiency and clean energy are the way forward.

Sincerely,

Stephanie Dolmat-Connell
