I am e-mailing you to voice my concern about the potential added fee proposed by Rocky Mountain Power which it intends to charge all those with solar systems on their roof that are connected to their transmission line. While it is appreciated that they are supportive of the implementation of these systems and provide net metering agreements, however, to now ask for an additional \$4.50 per month seems unreasonable. At \$0.09 per kWh that's the equivalent of 50 kWh. That's quite a lot. This behavior certainly will not encourage citizens to choose the cleaner more sustainable approach to energy.

Thanks for taking note of my opinion. I appreciate the work you do.
