Dear Fellow Citizen,

As a parent my greatest responsibility is to protect and care for my children. One of the greatest threats my children and their generation face is global climate change. Therefore, I need to do all that I can to reduce this threat. And part of what I can do is to encourage my government--at all levels--to address this danger.

We are a two car family having a Prius and an all electric Mitsubishi. We have solar panels on our roof. Our government needs to do all it can to encourage more people to use solar. Please keep in mind the needs of our children as you make decisions concerning adding fees that would surely discourage more solar.

Thank you for considering this perspective. Sincerely, Deb Sawyer
