Dear Sir/Madam,

I am totally against Rocky Mountain Power levying a \$4.25 monthly charge or indeed any monthly charge on private individuals who pay out of their own pocket to have solar panels installed. Although I do not have solar panels myself, I know that I, and all of my neighbors benefit from cleaner air, and would support Rocky Mountain Power giving the homeowners with solar panels a small credit. These homeowners also help the valley in the peak summer months, by contributing to the grid, when our Power plants struggle with electrical demand.

Rocky Mountain Power needs to make a MUCH greater effort to harness the sun's energy. As the 3rd most sunniest state, why are we #47 in the USA in developing energy from the sun. It is a great shame the Rocky Mountain Power does see the potential of solar in not only Utah and USA, but also in tapping into the world's thirst for clean renewable energy.

thanks for your time,  
Ian Macdonald
