Dear PSC:

I have just invested a great deal of money for roof-top solar photo-voltaic electrical energy generation. This action, if repeated by many thousands of others over the decades will substantially reduce our need to use fossil fuels for electrical generation. This may not square with RMP shareholders, but they have a public ticket monopoly and at times act counter to what is best for our local environment. Stacking a monthly fee on to roof-top solar generation (Docket Number:13-035-184) is guaranteed to squelch interest in the investment in roof-top solar. For the good of our environment I hope the PSC gives this fee a big thumbs down.

Sincerely,

John Hayes
