### Who Benefits from Solar Energy?

Rooftop solar gives Utahns an opportunity to generate their own electricity cleanly and efficiently, thereby contributing nonpolluting energy to Utah's electricity grid. We all benefit from freedom of choice including:

- Customers: homes, schools and businesses can lower their energy bills
- Non-solar customers: more rooftop solar means utilities have to invest less in power plants and other expensive infrastructure, savings they can pass on to ALL their customers.
- Local jobs and local economy: Rooftop solar support hundreds of local Utah jobs and keeps energy dollars invested right in your own community rather than the pockets of big energy companies.
- Taxpayers: lower energy bills for schools and other public agencies, that go solar, means more dollars available for other services.
- Everyone: improved air quality, energy security, public health and economic opportunity.

Please reject the punitive fees that Rocky Mountain Power is proposing.

Thank you,

Eileen McCabe  
West Jordan, UT
