1 **INTRODUCTION**

2 **Q. WHAT IS YOUR NAME, OCCUPATION AND BUSINESS ADDRESS?**

3 A. My name is Donna Ramas. I am a Certified Public Accountant licensed in  
4 the State of Michigan and Principal at Ramas Regulatory Consulting, LLC,  
5 with offices at 4654 Driftwood Drive, Commerce Township, Michigan  
6 48382.

7 **Q. ARE YOU THE SAME DONNA RAMAS THAT SUBMITTED PREFILED**  
8 **DIRECT TESTIMONY IN THIS PROCEEDING ON MAY 1, 2014?**

9 A. Yes, I am.

10 **Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?**

11 A. I first address several recommendations that I am supportive of which are  
12 presented in the direct testimonies of The Federal Executive Agencies  
13 (“FEA”) witness Greg R. Meyer; UAE Intervention Group (“UAE”) witness  
14 Kevin C. Higgins; and Division of Public Utilities (“DPU” or “Division”)  
15 witnesses Matthew Croft and Richard S. Hahn.

16

17 I then briefly address the direct testimony of DPU witness David T.  
18 Thomson as it pertains to costs associated with the Wood Hollow wildfire.

19

20 I next address two issues discussed in the direct testimony of Artie Powell  
21 on behalf of the DPU. Specifically, as I have done in several prior cases, I  
22 address Dr. Powell’s position that the actual historical generation overhaul  
23 expense amounts used in normalizing the amount of generation overhaul

24 expense to include in base rates should be escalated to test year dollars  
25 prior to averaging. I again respectfully disagree with Dr. Powell's  
26 recommendations and conclusions on this issue. I also discuss several  
27 aspects of Dr. Powell's testimony addressing RMP's request to include the  
28 net prepaid pension asset in rate base.

29

30 Finally, I provide the impact of the updated line-loss factors on the  
31 jurisdictional allocation factors that include system load in determining the  
32 allocation percentage between the states. DPU witness George Evans  
33 and OCS witness Philip Hayet both recommend that the line-loss factors  
34 in the GRID model be updated. The line-loss factor updates result in a  
35 reduction of the system energy requirements. In his direct testimony, Mr.  
36 Hayet updated the system loss factor and applied the impact equally to all  
37 jurisdictional load. In his rebuttal testimony, Mr. Hayet refines his  
38 calculations by developing individual loss factor adjustments for each  
39 state.

#### 40 **SUPPORTIVE REBUTTAL TESTIMONY ON SELECT ISSUES**

##### 41 **Expired Amortization of Regulatory Asset**

42 **Q. ARE THERE ANY ISSUES PRESENTED IN THE DIRECT TESTIMONY**  
43 **OF FEA WITNESS GREG R. MEYERS FOR WHICH THE COMMISSION**  
44 **HAS PROVIDED FURTHER GUIDANCE OR DIRECTIVES?**

45 **A.** Yes. At page 15 of his direct testimony, Mr. Meyers indicates that the  
46 regulatory asset associated with the tax impact of healthcare reform

47 changes to the deductibility of Medicare retiree drug subsidies will be fully  
48 amortized in September 2014. Thus, he recommends that the  
49 amortization expense be removed from the test year. The response to  
50 FEA Data Request 1.3, Attachment FEA 1.3 shows that \$1,237,799  
51 remains in test year expenses for the amortization on a total Company  
52 basis.

53

54 In its September 13, 2010 Order in Docket No. 10-035-38, at page 8, the  
55 Commission specifically addressed the amortization and the expiration  
56 thereof as follows:

57 Based upon the above-described findings and conclusions, we  
58 issue an accounting order authorizing PacifiCorp to record a  
59 regulatory asset in the amount of \$6.284 million. The asset shall be  
60 amortized over a four year period beginning October 1, 2010 and  
61 ending September 30, 2014. No return on rate base is authorized  
62 for any unamortized portion of the asset. PacifiCorp shall remove  
63 the amortization from rates in the Company's general or single item  
64 rate case anticipated to be filed in 2014, effective October 1, 2014.

65

66 Thus, under the Commission's Order, PacifiCorp is to remove the  
67 amortization expense associated with the tax impact of healthcare reform  
68 changes to the deductibility of Medicare retiree drug subsidies in this rate  
69 case. In searching through RMP's filing, I was unable to locate an  
70 adjustment removing the amortization expense. If the Company is unable  
71 to clearly demonstrate in its rebuttal testimony that the amortization  
72 expense has been excluded from test year expenses, then Mr. Meyer's  
73 adjustment should be made.

74

75 **Special Contract Rate Increases**

76 **Q. UAE WITNESS KEVIN HIGGINS INDICATES THAT RMP HAS NOT**  
77 **ACCOUNTED FOR A PERCENTAGE BASE RATE INCREASE FOR A**  
78 **SPECIAL CONTRACT CUSTOMER THAT IS EFFECTIVE JANUARY 1,**  
79 **2015 PER THE CONTRACT TERMS. DO YOU AGREE THAT AN**  
80 **ADJUSTMENT SHOULD BE MADE TO THE TEST YEAR TO REFLECT**  
81 **CONTRACTUAL RATE INCREASE?**

82 A. Yes. I am not personally familiar with the special contract specifically  
83 discussed by Mr. Higgins in his testimony. However, if his assertion that  
84 the contract calls for a percentage rate increase effective January 1, 2015  
85 is accurate, then I agree that an adjustment should be made to reflect the  
86 impact on the test year ending June 30, 2015. UAE Exhibit RR 1.2 shows  
87 that reflecting the increase for the six months of the test year that it would  
88 be effective results in a \$268,772 increase in Utah revenues, which  
89 reduces the revenue requirements in this case by \$269,085.

90 **Naughton Unit 3 Extended Coal Operations**

91 **Q. WHAT ASSUMPTIONS DID RMP INCORPORATE IN ITS FILING**  
92 **REGARDING THE OPERATION OF NAUGHTON UNIT 3?**

93 A. RMP prepared its filing under the assumption that Naughton Unit 3 will  
94 cease operations as a base load coal-fired generating unit in December  
95 2014 and be converted to a gas-fired peaking unit by May 2015. RMP has  
96 requested approval to extend the operation of the unit as a coal-fired unit  
97 until December 31, 2017. The Direct Testimony of Steven R. McDougal,

98 at page 44, indicates that the Company will update the revenue  
99 requirement in its rebuttal filing if it receives authorization for the extension  
100 prior to its rebuttal filing. He also indicates that the estimated reduction to  
101 the revenue requirements filed in this case resulting from such extension  
102 is approximately \$5.2 million.

103

104 In its April 10, 2014 Net Power Cost (“NPC”) Update filing in this case,  
105 RMP indicated that the extension of the operation of Naughton Unit 3 as a  
106 coal-fired resource until December 31, 2017 is now contingent on the  
107 Wyoming Department of Environmental Quality granting an amendment to  
108 the unit’s Wyoming Regional Haze Best Available Control Technology  
109 (“BART”) permit. The NPC Update filing indicated that if Wyoming grants  
110 the amendment to the BART permit prior to the rebuttal testimony due  
111 date, RMP will update the revenue requirements in its rebuttal position to  
112 reflect the impacts of the amendment. The NPC Update also indicates  
113 that if Wyoming’s decision to modify the BART permit is issued after the  
114 rebuttal testimony due date, “...the Company will measure and defer any  
115 cost savings from continued Naughton Unit 3 coal operations past  
116 December 2014 for future rate making treatment.”

117 **Q. DID THE OCS OPPOSE THIS APPROACH IN ITS DIRECT**  
118 **TESTIMONIES?**

119 A. No. The OCS did not find RMP's proposed approach to this issue  
120 unreasonable. Thus, I did not address RMP's approach in my direct  
121 testimony.

122 **Q. DID ANY PARTIES PRESENT AN ALTERNATIVE APPROACH?**

123 A. Yes. UAE Witness Kevin Higgins recommends that the revenue  
124 requirements in this case be calculated based on the Company's planned  
125 extension of the Naughton Unit 3 operations as a coal-fired unit, reducing  
126 the Utah revenue requirement by \$5.2 million. He indicates on page 45 of  
127 his direct testimony that if the Company's proposed extension is rejected,  
128 "...the incremental costs attributed to that rejection can be deferred for  
129 future ratemaking treatment." This is the inverse of the Company's  
130 approach.

131 **Q. IS MR. HIGGINS' ALTERNATIVE APPROACH ALSO REASONABLE?**

132 A. Yes, it is. While the OCS does not find RMP's approach to be  
133 unreasonable, the approach proposed by Mr. Higgins would also be an  
134 acceptable alternative. Both approaches would provide protection to  
135 ratepayers and shareholders should the outcome of the requested  
136 extension of Naughton Unit 3 as a coal-fired unit differ from the  
137 assumption used in setting the revenue requirements adopted by the  
138 Commission in this case.

139 **Unclassified Plant – Account 106 Adjustment**

140 **Q. IN HIS DIRECT TESTIMONY, DPU WITNESS MATTHEW CROFT**  
141 **REMOVES UNCLASSIFIED PLANT FROM TEST YEAR RATE BASE.**

142           **COULD YOU PLEASE BRIEFLY SUMMARIZE YOUR**  
143           **UNDERSTANDING OF HIS RECOMMENDATION REGARDING**  
144           **UNCLASSIFIED PLANT?**

145    A.    Yes. Exhibit RMP\_\_(SRM-3), pages 2.21 through 2.30, show that the  
146           amount included in the average test year for the various unclassified plant  
147           accounts is based on the historic base year average balances. For  
148           example, page 2.25, lines 1636 through 1638 demonstrate that the  
149           “Unclassified Trans Plant – Account 300” balance for both the average  
150           base year and the average test year is \$68,298,685 (\$29,114,580 Utah).  
151           FERC Account 106 includes Completed Construction Not Classified, or  
152           “Unclassified Plant”. At page 10 of his Direct Testimony, Mr. Croft  
153           explains that what he identifies as “Unclassified Plant (Account 106)”  
154           consists of three different FERC accounts, including FERC Account 106.  
155           At that same page of his testimony, Mr. Croft indicates that he removes all  
156           Unclassified Plant (Account 106) amounts from rate base in the JAM  
157           model because the underlying capital additions and retirement estimates  
158           that give rise to the balances are already accounted for in the plant in  
159           service accounts, FERC account 101, subaccounts 301 to 399, in the  
160           future test year. Thus, the unclassified plant balances included in the  
161           future test year by RMP need to be removed as they are already included  
162           in the classified plant balances (i.e., Account 101, subaccounts 301  
163           through 399).

164 **Q. DO YOU FIND MERIT IN MR. CROFT'S ADJUSTMENT TO REMOVE**  
165 **THE UNCLASSIFIED PLANT BALANCES FROM TEST YEAR RATE**  
166 **BASE?**

167 A. Yes, I do find merit in Mr. Croft's discussion on this issue. However, I did  
168 not independently trace the items included in FERC account 106 –  
169 Completed Construction Not Classified in the base year to the Account  
170 101 – Plant in Service balances at the beginning of the test year to ensure  
171 that there is in fact a double count for each of the individual plant items.  
172 Unless RMP is able to clearly demonstrate in its rebuttal testimony that  
173 there is no double-counting of the unclassified plant balances in the test  
174 year, Mr. Croft's adjustment should be adopted.

175 **City Creek Project – CIAC**

176 **Q. DO YOU WISH TO COMMENT IN YOUR REBUTTAL TESTIMONY ON**  
177 **ANY OF THE ISSUES RAISED IN THE DIRECT TESTIMONY OF DPU**  
178 **WITNESS RICHARD S. HAHN?**

179 A. Yes. In his direct testimony, at pages 55-60, Mr. Hahn addresses the City  
180 Creek project, which is a mixed residential and commercial development  
181 in downtown Salt Lake City. Property Reserve Inc. is the developer of the  
182 project. In both this rate case and the prior general rate case, Mr. Hahn  
183 contends that the Company failed to require the developer of the City  
184 Creek project to pay a reasonable amount of Contributions in Aid of  
185 Construction ("CIAC") on the project and that the determination of the  
186 CIAC was not consistent with RMP's line extension policy described in

187 Regulation 12. In the current proceeding, at page 60 of his direct  
188 testimony, Mr. Hahn indicates that the proper CIAC on the project that  
189 RMP should have collected is \$17.85 million, RMP collected \$7 million,  
190 and that the under-collection is \$10.85 million. He recommends that plant  
191 in service be reduced by the \$10.85 million that he contends should have  
192 been collected from the developer of the project.

193 **Q. WHY SHOULD RMP PURSUE THE RECOVERY OF CIAC WHEN**  
194 **ALLOWED UNDER THE RULES AND REGULATIONS?**

195 A. Any CIAC collected from developers and/or new customers connecting to  
196 RMP's system reduces the amount of plant costs to be recovered from the  
197 existing customer base. If a reasonable amount of CIAC is not collected  
198 from new customers to help cover the cost of connecting to RMP's  
199 system, this shifts costs of serving new customers to the existing  
200 customers.

201 **Q. DO YOU SHARE ANY OF MR. HAHN'S CONCERNS REGARDING THE**  
202 **LEVEL OF CIAC COLLECTED BY RMP FROM THE DEVELOPER OF**  
203 **THE CITY CREEK PROJECT?**

204 A. I have several concerns regarding the determination of the amount of  
205 CIAC to be collected on the City Creek Project. My first concern is that  
206 Mr. Hahn indicates at page 56 of his testimony that in response to DPU  
207 Data Request 31.2 in Docket No. 11-035-200, RMP stated it did not  
208 perform an estimate of a CIAC payment for the City Creek project. The  
209 response to DPU Data Request 20.10(c) in this case identifies the total

210 cost for phases 1 and 2 of the City Creek Project as \$32.6 million. Given  
211 the high amount of capital cost to RMP caused by the City Creek project, I  
212 find it surprising that an estimate of the appropriate CIAC payment was  
213 not performed or pursued by RMP.

214

215 Additionally, DPU Data Request 20.10(d) asked RMP to “Provide all  
216 supporting documentation for the CIAC payments made and demonstrate  
217 how these payments comply with Company policy regarding customer  
218 contributions.” The response provided by RMP stated:

219 No CIAC payments were made by Property Reserve Inc. (PRI),  
220 however, PRI provided value to the project in the form of trenching,  
221 ducts and vaults. That value was estimated at \$1.45 million after  
222 work had been completed and is shown on the attached file  
223 “Attachment DPU 20.10-2”. The cost associated with trenching,  
224 ducts and vaults is a non-allowable cost in accordance with Rocky  
225 Mountain Power Line Extension Policy, Regulation 12 in Utah.  
226

227 In my opinion, this response does not adequately explain why CIAC was  
228 not pursued on the project and does not demonstrate that the Company’s  
229 policy regarding customer contributions was complied with.

230 **Q. YOU INDICATED ABOVE THAT MR. HAHN’S ADJUSTMENT TO**  
231 **REDUCE PLANT IN SERVICE BY \$10.85 MILLION INCLUDED THE**  
232 **ASSUMPTION THAT RMP COLLECTED \$7 MILLION OF CIAC ON THE**  
233 **PROJECT. THE RESPONSE TO DPU DATA REQUEST 20.10(D)**  
234 **QUOTED ABOVE INDICATES THAT NO CIAC PAYMENTS WERE**  
235 **MADE BY PROPERTY RESERVE INC. ON THE PROJECT. CAN YOU**  
236 **EXPLAIN THIS DISCREPANCY?**

237 A. No. Mr. Hahn's testimony, at pages 56 – 57, indicates that the developer  
238 constructed certain distribution facilities at its expense of \$5.55 million and  
239 made a payment of \$1.45 million, bringing the total cash and contributions  
240 to \$7.0 million. However, RMP's response to DPU 20.10(d) indicates that  
241 the value provided by Property Reserve Inc. on the project was only \$1.45  
242 million. Thus, Mr. Hahn's recommended adjustment may be understated  
243 by the difference.

244 **Q. ARE YOU RECOMMENDING THAT PLANT IN SERVICE ASSOCIATED**  
245 **WITH THE CITY CREEK PROJECT BE REDUCED AT THIS TIME FOR**  
246 **RMP'S FAILURE TO COLLECT CIAC FROM THE DEVELOPER?**

247 A. Not at this time. I assume that RMP will offer rebuttal to Mr. Hahn's  
248 recommendation. If RMP fails to adequately explain and justify its  
249 decision to not pursue or collect CIAC from the developer in its rebuttal  
250 position, then I would agree with Mr. Hahn's position that a CIAC  
251 adjustment should be imputed to protect the existing ratepayers from the  
252 higher capital costs associated with the project.

253 **WOOD HOLLOW WILDFIRE COSTS**

254 **Q. ARE THERE ANY ISSUES DISCUSSED IN THE DIRECT TESTIMONY**  
255 **OF DPU WITNESS DAVID T. THOMSON THAT YOU WISH TO**  
256 **ADDRESS?**

257 A. Yes. In addressing the costs incurred by the Company associated with  
258 the Wood Hollow wildfire, at page 10 of his testimony, Mr. Thomson  
259 states: "The Division believes as stated above that the legal costs and

260 any other directly related costs of the Wood Hollow fire should be  
261 normalized in this general rate case.” (Emphasis added) Based on the  
262 public portion of the Company’s response to DPU 21.3, the Company  
263 adjusted certain fire and other damage costs out of base period costs, and  
264 they are not included in the future test period for the rate case. The public  
265 portion of the response to OCS Data Request 9.9 indicates that the  
266 injuries and damages expense included in the filing is based on average  
267 cash payments over three years. The response also indicates cash  
268 payments made on a particular item that was included in the injuries and  
269 damages expense on the Company’s books was removed by the  
270 Company from the filing. It is not clear from the response if the cash costs  
271 removed by the Company were associated with the Wood Hollow wildfire.  
272 To the degree any cash payments associated with the Wood Hollow  
273 wildfire were removed by RMP such that RMP is not seeking recovery  
274 from Utah ratepayers of the costs, then such costs should not be  
275 “...normalized in this general rate case.”

276 **GENERATION OVERHAUL EXPENSE**

277 **Q. WOULD YOU PLEASE BRIEFLY SUMMARIZE THE ISSUE OF**  
278 **CONTENTION INVOLVING THE NORMALIZATION OF GENERATION**  
279 **OVERHAUL EXPENSES?**

280 A. As previously indicated in my direct testimony, generation overhaul  
281 expenses are included in rates based on a four year average level. The  
282 reason for using a four-year average in normalizing the generation

283 overhaul expenses is because the amount of expense incurred by RMP  
284 for the overhaul of generation facilities vary significantly from year to year  
285 and from generation unit to generation unit. The amount of overhaul costs  
286 capitalized versus expensed varies from overhaul to overhaul and  
287 between units depending upon the work performed in the overhaul. Many  
288 factors impact the overhaul expenses incurred each year. The costs to be  
289 included in rates are normalized based on a four-year average level in  
290 order to ensure that base rates are not set to include either an abnormally  
291 high or an abnormally low level of generation overhaul expense.

292

293 The Company, OCS and DPU all agree that the costs should be  
294 normalized based on a four-year average level. Where the parties differ is  
295 in regards to whether or not the historic costs should be inflated prior to  
296 determining the average test year expense level. It has consistently been  
297 the position of the OCS that the costs should not be escalated prior to  
298 determining the normalized expense. The Commission has agreed with  
299 the OCS' position that the historic costs should not be inflated prior to  
300 determining the normalized four-year average expense level in all cases in  
301 which it has addressed the issue in an order, specifically in its August 11,  
302 2008 Order issued in Docket No. 07-035-93 and in its February 18, 2010  
303 Order issued in Docket No. 09-035-23. In this case, Company witness  
304 Steven R. McDougal and DPU Witness Artie Powell continue to

305 recommend that the historic costs be escalated prior to determining the  
306 four-year average expense.

307 **Q. DID YOU ADDRESS THIS ISSUE IN YOUR DIRECT TESTIMONY?**

308 A. Yes, I did. In my direct testimony, I addressed Mr. McDougal's  
309 recommendation that the costs be escalated prior to averaging. In this  
310 testimony, I address the information provided in DPU Witness Powell's  
311 direct testimony relevant to the issue.

312 **Q. HAS DR. POWELL PRESENTED ANY NEW EVIDENCE IN THIS CASE**  
313 **SUPPORTING THE ESCALATION OF THE HISTORICAL BALANCES**  
314 **IN DERIVING THE NORMALIZED GENERATION OVERHAUL**  
315 **EXPENSE LEVEL THAT WAS NOT PREVIOUSLY CONSIDERED BY**  
316 **THE COMMISSION IN THE LAST FULLY LITIGATED RMP RATE CASE**  
317 **PROCEEDING?**

318 A. In my opinion, no. Although he states at page 6 of his Direct Testimony  
319 that the Division presented additional or new evidence and information in  
320 several prior cases and in this case that had not been considered in  
321 Docket Nos. 07-035-93 and 09-035-23, similar information had been  
322 presented to the Commission with Dr. Powell's surrebuttal testimony in  
323 Docket No. 09-035-23 and was considered by the Commission. In his  
324 testimony in the current case, Dr. Powell presents a discussion comparing  
325 Method 1 and Method 2 of forecasting generation overhaul expenses.  
326 The information presented in Dr. Powell's testimony comparing his  
327 "Method 1" (i.e., inflation of the average of four historical values) and

328 “Method 2” (i.e., averaging of the inflated historical values) and arguments  
329 regarding why he feels Method 2 is superior to Method 1 was previously  
330 presented to the Commission in his surrebuttal testimony in Docket No.  
331 09-035-23. A comparison of Method 1 to Method 2 and various model  
332 simulations and statistical comparisons under either Method 1 or Method 2  
333 was presented to the Commission for consideration in Docket No. 09-035-  
334 23. While Dr. Powell has expanded his explanations from that provided in  
335 his Surrebuttal Testimony in Docket No. 09-035-23, he is still comparing  
336 the two methods.

337

338 In explaining his position that it is preferable to escalate the actual  
339 historical costs prior to determining the normalized average cost level, Dr.  
340 Powell presents several formulas in this case that may not have been fully  
341 included in Docket No. 09-035-23. He also discusses some economic  
342 theory and statistical theory. However I find nothing persuasive that would  
343 cause me to change my long-standing belief that generation overhaul  
344 expenses should not be escalated or inflated prior to averaging. It is my  
345 opinion that there is nothing new presented in this case that should lead to  
346 the conclusion that the historical costs should be escalated in determining  
347 the normalized cost level. I recommend that the Commission again re-  
348 affirm that the historical generation overhaul expenses should not be  
349 escalated for purposes of normalizing generation overhaul expense to  
350 include in base rates.

351 **Q. ARE THERE ANY KEY POINTS THAT YOU FEEL ARE NOT**  
352 **CONSIDERED IN DR. POWELL'S ANALYSIS AND IN THE METHOD 1**  
353 **AND METHOD 2 COMPARISONS HE PRESENTS AND EVALUATES?**

354 A. Yes. Dr. Powell's hypothetical examples, calculations and discussion  
355 focus on the pressures of inflation on costs. While the hypothetical  
356 examples compare different methods of escalating costs, the analysis is  
357 not specific to the overhaul expense realized by RMP. It does not factor in  
358 the productivity offsets that have been and will continue to be realized by  
359 the Company in overhauling the generation units. This is addressed in  
360 further detail at pages 30 – 31 of my direct testimony.

361 **NET PENSION & POST-RETIREMENT WELFARE PLAN PREPAID ASSET**

362 **Q. DR. POWELL PRESENTS THE DIVISION'S POSITION ON RMP'S**  
363 **REQUEST TO INCLUDE THE NET PREPAID PENSION ASSET IN**  
364 **RATE BASE. ARE THERE ANY SPECIFIC AREAS IN DR. POWELL'S**  
365 **DISCUSSION OF THE NET PREPAID PENSION ASSET THAT YOU**  
366 **WISH TO ADDRESS?**

367 A. Yes. The issue of whether or not PacifiCorp's prepaid pension asset and  
368 accrued other post-retirement benefit liability, net of accumulated deferred  
369 income taxes, should be included in rate base was addressed at length at  
370 pages 60 through 71 of my Direct Testimony. In this rebuttal testimony, I  
371 will refer to this rate base issue as either the "net prepaid asset" or the "net  
372 accrued liability" for ease of discussion. At page 13 his Direct Testimony,  
373 lines 254 through 256, Dr. Powel states that: "Conceptually, the Division

374 supports the inclusion in rate base of such prepaid costs that the  
375 Company incurs in providing service to its customers.” Similarly,  
376 beginning at page 15, Dr. Powell explains the basis of his “general  
377 support” for the recovery of the net prepaid pension asset from ratepayers.  
378 While Dr. Powell does express the Division’s conceptual support or  
379 general support for the recovery from ratepayers, he indicates at page 13  
380 of his testimony that the Division does not believe that the Company has  
381 demonstrated the reasonableness of its proposal and has not provided  
382 adequate proof for the Commission to justify the inclusion at this time. For  
383 the reasons identified in my direct testimony, I do not agree with Dr.  
384 Powell’s or the Division’s “conceptual” or “general” support of inclusion of  
385 the net prepaid asset in rate base to earn a return.

386 **Q. WHAT DOES DR. POWELL OFFER AS THE BASIS OF HIS “GENERAL**  
387 **SUPPORT” FOR THE RECOVERY OF THE NET PREPAID PENSION**  
388 **ASSET COSTS FROM RATEPAYERS?**

389 A. At page 15 of his direct testimony, he initially indicates that other prepaid  
390 assets are included in rate base. He then states that “...the FERC  
391 appears to allow, ‘as a general matter,’ prepaid pension assets in rate  
392 base as part of a utility’s OATT”. Dr. Powell then provides several  
393 citations from a FERC Order on Tariff Filing issued March 10, 2008 in  
394 Docket Nos. ER08-129-000 and ER08-129-001, involving Southern  
395 Company Services, Inc. In that docket, Southern Company Services, Inc.  
396 was acting as agent for Alabama Power Company, Georgia Power

397 Company, Gulf Power Company, Mississippi Power Company and  
398 Savannah Electric and Power Company (collectively referred to as  
399 “Southern Companies”).

400 **Q. IS THE SITUATION ADDRESSED BY FERC IN THE SOUTHERN**  
401 **COMPANY SERVICES, INC. CASE SIMILAR OR CONSISTENT WITH**  
402 **RMP’S SITUATION AS IT PERTAINS TO THE NET PREPAID ASSET?**

403 A. No, there are several significant differences. For example, Southern  
404 Companies’ OATT rates were converted to comprehensive formula rates  
405 effective May 1, 2003 as a result of a settlement. Since that time, the  
406 amount of pension expense included in the OATT rates was trued-up each  
407 and every year to the actual costs for that year. Thus, the amount of  
408 pension expense recovered in the OATT rates equaled the amount of  
409 booked pension expense. This has not been the case for RMP in Utah as  
410 there is no true-up of the pension expense in rates and rates are not re-set  
411 annually. Additionally, Southern Company, Inc. asserted that the prepaid  
412 pensions were included in the prepayments in rate base in the 2003  
413 settlement that resulted in the comprehensive formula rates. In the Order  
414 cited by Dr. Powell, FERC allowed Southern Companies to include in the  
415 OATT formula rates the jurisdictional portion of the prepaid pension asset  
416 accrued after the formula rates went into effect, offset by corresponding  
417 amounts of working capital reductions and deferred income taxes. FERC  
418 excluded over two-thirds of the amount of prepaid pension asset that  
419 Southern Company, Inc. sought to include in rate base. FERC specifically

420 found that it was "...not just and reasonable for Southern Companies to  
421 include any amounts related to prepaid pension accumulated prior to May  
422 2003 in rate base under Southern Companies' OATT." This is clearly  
423 different than the issue at hand involving RMP. In fact, if any weight were  
424 to be given to the FERC Order cited by Dr. Powell, it would be consistent  
425 with the alternative recommendation presented in my direct testimony.

426 **Q. PLEASE EXPLAIN HOW THE FERC ORDER WOULD BE CONSISTENT**  
427 **WITH YOUR ALTERNATIVE RECOMMENDATION.**

428 A. In my direct testimony, starting at page 70, I indicated that if the  
429 Commission determines that rate base treatment should be considered for  
430 the cash contributions made to the pension plan, it should be considered  
431 on a prospective basis only. In the FERC Order, the pension asset was  
432 only allowed in rate base in determining the formula rates to the extent  
433 that it was applicable to the period formula rates were effective. This  
434 would be the period in which the pension expense included in the formula  
435 rates was trued-up to actual amounts on an annual basis. At page 71 of  
436 my direct testimony, I indicated as follows:

437 Starting with the test year in this case, one could consider the  
438 difference between the amount of cash funding into the pension  
439 plan that is applicable to electric operation employees (in other  
440 words exclusive of mining operations) and the amount of pension  
441 expense that is factored into the revenue requirements that are  
442 collected from customers. The amount of cash funding and the  
443 amount of expenses factored into the revenue requirement as a  
444 result of general rate cases could be tracked going forward and  
445 only the cumulative difference between these two amounts  
446 applicable to the Utah jurisdiction should be considered for rate  
447 base treatment. This would ensure that the calculation is in fact  
448 only based on the electric operations, only based on the Utah

449 jurisdictional amounts, and based on the amount actually being  
450 recovered in rates charged to Utah customers. While I do not  
451 recommend this approach, it is far more reasonable than the  
452 approach proposed by PacifiCorp in this case which is based on  
453 many, many years of past accounting entries that differ from the  
454 amounts included in electric rates charged to Utah ratepayers.  
455

456 **Q. IS THE NET PREPAID ASSET INCLUDED IN PACIFICORP'S**  
457 **TRANSMISSION RATES?**

458 A. No. In response to DPU Data Request 39.15, the Company indicated that  
459 it does not include the net prepaid asset as part of its formula model for  
460 calculating transmission rates as the accounts containing the net prepaid  
461 pension asset are not included in the Company's transmission rate  
462 formula. DPU Data Request 39.14 asked the Company if FERC allows  
463 prepaid pension assets in rate base and to provide any orders indicating  
464 such allowance that the Company is aware of. In response, RMP  
465 indicated that it "...is currently evaluating FERC precedent regarding  
466 treatment of prepaid pension asset in rate base." In searching the FERC  
467 website, the only case I was able to find that specifically addressed the  
468 inclusion of the prepaid pension asset in OATT formula-based rates was  
469 the case cited by Dr. Powell.

470 **Q. BEGINNING AT PAGE 18 OF HIS TESTIMONY, DR. POWELL**  
471 **DISCUSSES WHETHER OR NOT THE COMPANY HAS "...PROVIDED**  
472 **ANY EVIDENCE THAT INCOME FROM THE PENSION HAS REDUCED**  
473 **ITS PENSION EXPENSE." CAN YOU BRIEFLY DISCUSS THE IMPACT**

474 **OF EARNINGS ON THE PENSION PLAN ASSETS ON PENSION**  
475 **EXPENSE?**

476 A. Yes. The expected return on pension plan assets is always an offset in  
477 calculating the pension expense. Under Accounting Standards  
478 Codification 715 (sometimes referred to as FAS 87), the following  
479 components make up the net periodic benefit cost (or pension expense):  
480 service cost, interest cost on projected benefit obligation, expected return  
481 on assets, amortization of prior service costs, amortization of transition  
482 obligation (if any remaining), and amortization of net (gain)/loss. The  
483 expected return on assets, which is a negative amount or reduction to the  
484 expense in the calculation, is based on the expected long-term rate of  
485 return on plan assets applied to the market-related value of plan assets.  
486 Since the qualified pension plan is required to be funded, there is always  
487 an offset in the pension expense calculation for the expected return on  
488 plan assets, which Dr. Powell refers to in his testimony as “income from  
489 the pension.”

490 **Q. SINCE THERE IS ALWAYS AN OFFSET IN THE PENSION EXPENSE**  
491 **CALCULATION FOR THE EXPECTED RETURN ON PLAN ASSETS,**  
492 **DOES THAT MEAN THAT SHAREHOLDER CONTRIBUTIONS**  
493 **CAUSED THE FULL AMOUNT OF THE EXPECTED RETURN?**

494 A. No, definitely not. The expected return on plan assets (or “income from  
495 pension” as referred to in Dr. Powell’s testimony), is based on the market  
496 value of the plan assets. The amount of plan assets considered in

497 determining the expected return on plan assets are impacted by factors  
498 such as contributions to the pension plan, pension payments made out of  
499 the pension plan assets, and the prior earnings realized on the pension  
500 plan investments. The prepaid pension asset that RMP is seeking to  
501 include in rate base is the cumulative difference between the cash  
502 contributions to the pension plan assets and the actuarially determined  
503 pension expense. This differs from the market value of plan assets that is  
504 used in calculating the expected return on plan asset that is a component  
505 of the pension expense calculation. However, that being said,  
506 contributions to the pension plan increase the expected return on plan  
507 assets, which reduces pension expense over time.

508 **Q. IN HIS DIRECT TESTIMONY, DR. POWELL INDICATES THAT IF THE**  
509 **COMMISSION ALLOWS THE INCLUSION OF THE NET PENSION**  
510 **ASSET IN RATE BASE, THE DIVISION RECOMMENDS THE REVENUE**  
511 **REQUIREMENT IMPACT BE REDUCED BY A ONE-TIME OFFSET OF**  
512 **\$4.2 MILLION ON A UTAH BASIS. COULD YOU PLEASE SUMMARIZE**  
513 **YOUR UNDERSTANDING OF THE DIVISION'S RECOMMENDED**  
514 **OFFSET AND THE PURPOSE OF THE OFFSET?**

515 A. Dr. Powell indicates at lines 456 through 460 that the one-time offset  
516 would recognize the fact that the current net prepaid asset is the  
517 cumulative difference in cash contributions and expenses, and that from  
518 1993 through 2007 the balance was negative. Apparently the Division  
519 views its proposed one-time offset as somehow alleviating the fact that the

520 rate base was not reduced over the extended period in which the  
521 cumulative pension expense exceeded the cash contributions to the  
522 pension fund (ie., period of net accrued liability).

523

524 A review of DPU Exhibit 2.4 DIR-RR shows that the offset is based on first  
525 calculating what the revenue requirement impact would have been in each  
526 of the years, 1993 through August 2014, if the net prepaid asset or  
527 accrued liability that existed in each year had been included in the  
528 revenue requirements. For example, the exhibit shows that as of 1996,  
529 the difference between the cumulative pension and post-retirement  
530 welfare plan cash contributions and the cumulative pension and post-  
531 retirement welfare plan expense was a net accrued liability of \$11.9 million  
532 before taxes and \$7.4 million net of the associated accumulated deferred  
533 income taxes. The exhibit then applies the Commission authorized rate of  
534 return that was effective in 1996 of 13.81% to determine the purported  
535 "revenue requirement" impact, which is a reduction to revenue  
536 requirement of \$1.1 million. The Division then applies CPI to determine  
537 the CPI adjusted revenue requirements. The \$4.2 million one-time offset  
538 proposed by the Division in the event the Commission includes the net  
539 prepaid asset in rate base in this case is the total cumulative "CPI-  
540 adjusted revenue requirement" it calculated for each year, 1993 through  
541 August 2014.

542 **Q. DO YOU AGREE THAT THE PROPOSED ONE-TIME OFFSET**  
543 **OFFERED BY THE DIVISION IS AN APPROPRIATE MEANS OF**  
544 **ALLEVIATING THE FACT THAT THE NET ACCRUED LIABILITY DID**  
545 **NOT OFFSET RATE BASE IN THE MANY PAST YEARS THAT THE**  
546 **CUMULATIVE EXPENSE EXCEEDED THE CUMULATIVE CASH**  
547 **CONTRIBUTIONS?**

548 A. No, I do not. First, it is my opinion that the \$4.2 million offset would  
549 constitute retroactive ratemaking. The determination of the \$4.2 million is  
550 based on calculating revenue requirement impacts in past years under a  
551 methodology that differs from what was actually used in setting rates in  
552 Utah and capturing that difference to essentially flow it back to ratepayers  
553 in a current period. It is not appropriate to retroactively calculate what the  
554 revenue requirements would have been had a different scenario or  
555 method been used in calculating rates (i.e., as if the accrued liability or net  
556 asset been included in rate base) and flow those impacts into future  
557 periods.

558

559 Additionally, Utah revenue requirements were not reset in each of the  
560 years considered in the calculation of the \$4.2 million. The calculation  
561 appears to be premised on the impacts if rates had been reset annually.

562 This is not the case.

563

564 Finally, the adjustment does not factor in the numerous reasons discussed  
565 in my direct testimony regarding why the net prepaid asset should not be  
566 included in rate base, such as the fact that the net prepaid balance may  
567 not have been fully funded by shareholders and includes amounts not  
568 associated with the electric operations. The issues raised in my direct  
569 testimony would also apply to the \$4.2 million one-time offset.

570 **JURISDICTIONAL ALLOCATION FACTORS**

571 **Q. ARE YOU RECOMMENDING ANY ADDITIONAL ADJUSTMENTS IN**  
572 **THIS REBUTTAL TESTIMONY?**

573 A. Yes. In his direct testimony filed on May 1, 2014, OCS witness Philip  
574 Hayet recommended that the line loss factors in the GRID model be  
575 updated to reflect a more recent five-year period. While use of the  
576 updated five-year average line losses reduces the system energy  
577 requirements, it also impacts the jurisdictional allocation factors that  
578 include system load in determining the allocation percentages between  
579 states. In his rebuttal testimony, Mr. Hayet refines his adjustment by  
580 developing individual loss factor adjustments for each state. In my direct  
581 testimony, I did not include the impact of the updated line-loss factors on  
582 the system energy requirements used in determining the jurisdictional  
583 allocation factors in the model. This rebuttal testimony presents the  
584 impacts of the updated line-loss amounts on the jurisdictional allocation  
585 factors and on the overall revenue requirement recommended by the  
586 OCS.

587 **Q. WOULD YOU PLEASE DESCRIBE THE LINE LOSS FACTOR**  
588 **ADJUSTMENT AND EXPLAIN WHY IT IMPACTS THE**  
589 **JURISDICTIONAL ALLOCATION FACTORS?**

590 A. Yes. In determining the line loss factors in the GRID model, RMP used a  
591 simple five-year average of line losses based on data for the period  
592 January 1, 2008 through December 31, 2012. OCS witness Philip Hayet  
593 recommends in his direct testimony that the data be updated for a more  
594 recent five-year period using 2009 through 2013 data. Use of the updated  
595 five-year average reduces the system energy requirements presented by  
596 the Company. Mr. Hayet's recommended power cost adjustments  
597 incorporate the impact of this update. His recommended adjustment is  
598 further refined in his rebuttal testimony. As use of the updated five-year  
599 average line losses reduces the system energy requirements, it also  
600 impacts the jurisdictional allocation factors that include system load in  
601 determining the allocation percentages between states.

602 **Q. WHAT IMPACT DOES CHANGING THE LINE LOSS HAVE ON TEST**  
603 **YEAR ENERGY REQUIREMENTS?**

604 A. Exhibit OCS 3.2R provides the impact on the energy requirements for  
605 Jurisdictional Allocation by using the more recent five-year average for  
606 each jurisdiction. Total system energy requirements decrease by 32,177  
607 MWh, or 0.05%. The Utah energy requirements decrease by 64,059 MWh  
608 or 0.26%. Since the Utah energy requirements are declining at a greater  
609 percentage than the system as a whole when updated to a more recent

610 five-year average line loss factor, the impact is a reduction in several of  
611 the jurisdictional allocation factors for the percentage allocated to the Utah  
612 jurisdiction.

613

614 Using the amounts presented in Exhibit OCS 3.2R, I incorporated the  
615 revised loads for jurisdictional allocation in the Jurisdictional Allocation  
616 Model in this case. Exhibit OCS 3.1R presents the OCS recommended  
617 revenue requirement, as revised to include the impact of the updated  
618 loads. The update to the loads is the only change made to the  
619 Jurisdictional Allocation Model when compared to Exhibit OCS 3.1D  
620 presented with my direct testimony. After reviewing RMP's rebuttal  
621 testimony, I will present the OCS's final revenue requirement position in  
622 my surrebuttal testimony.

623 **Q. WHAT IMPACT DID THE CHANGE IN LOADS HAVE ON THE**  
624 **PERCENTAGE ALLOCATIONS TO UTAH?**

625 A. Several allocation factors changed as a result of the change in loads. For  
626 example, the System Generation (SG) factor for Utah declined from  
627 42.6283% in RMP's model to 42.6069% in the revised Jurisdictional  
628 Allocation Model. Similarly, the System Energy (SE) factor declined from  
629 41.9717% to 41.8860%, and the System Overhead (SO) factor declined  
630 from 42.4703% to 42.4534%.

631 **Q. DID YOU NEED TO MAKE ANY FURTHER MODIFICATIONS TO THE**  
632 **AMOUNTS PRESENTED ON OCS 3.2R PRIOR TO INPUTTING THE**  
633 **ADJUSTMENT IN THE JURISDICTIONAL ALLOCATION MODEL?**

634 A. Yes. The information provided by the Company for energy sales and  
635 system load in response to OCS Data Request 2.52 and the 1<sup>st</sup>  
636 Supplemental Response to OCS 2.53 included the Wyoming jurisdiction  
637 on a combined basis, whereas the Jurisdictional Allocation Model  
638 separates the Pacific Power and Rocky Mountain Power Wyoming  
639 jurisdictions in the model. Since the breakdown between each of the  
640 Wyoming jurisdictions was not provided, I allocated the resulting Wyoming  
641 load presented on Exhibit OCS 3.2R between the Pacific Power and the  
642 RMP jurisdiction on the ratio of load between those two jurisdictions  
643 contained in the Company's model.

644 **Q. WHAT IMPACT DOES THE ABOVE DESCRIBED CHANGES IN LOAD**  
645 **HAVE ON REVENUE REQUIREMENTS?**

646 A. I entered the change in loads impacting the jurisdictional allocation factors  
647 after all other OCS recommended adjustments presented in the direct  
648 testimonies were input into the Jurisdictional Allocation Model. The  
649 resulting change in allocation factors, based on the incorporation of all  
650 other OCS direct testimony adjustments, resulted in the OCS  
651 recommendation changing from a decrease in revenues of \$4,646,097  
652 presented in my direct testimony to a decrease of \$6,266,233. The  
653 decrease of \$6,266,233 is shown in Exhibit OCS 3.1R. Thus, the resulting

654 change in the jurisdictional allocation factors caused a \$1,620,136  
655 reduction in revenue requirements. The impact from the change in the  
656 allocation factors will vary depending on what adjustments are ultimately  
657 adopted by the Commission in this case.

658 **Q. DOES THIS COMPLETE YOUR PREFILED REBUTTAL TESTIMONY?**

659 **A. Yes.**
