CONFIDENTIAL - SUBJECT TO RULE 746-100-16

REDACTED

June 4, 2014

**I. INTRODUCTION AND SUMMARY**

1  
2

3 **Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.**

4 A. Philip Hayet, 215 Huntcliff Terrace, Sandy Springs, Georgia 30350. I am a utility industry  
5 regulatory consultant at Hayet Power Systems Consulting (“HPSC”), and I am appearing  
6 on behalf of the Office of Consumer Services (“OCS”).

7 **Q. ARE YOU THE SAME PHILIP HAYET WHO SUBMITTED DIRECT**  
8 **TESTIMONY IN THIS DOCKET ON MAY 1, 2014?**

9 A. Yes, I am.

10 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

11 A. I am addressing two issues in this testimony. The first is discussed by both George Evans  
12 on behalf of the Division of Public Utilities (“DPU”) and Kevin Higgins on behalf of the  
13 UAE Intervention Group (“UAE”), and concerns adjustments to the Company’s  
14 calculation of wind integration costs associated with non-PacifiCorp wind resources owned  
15 by PacifiCorp transmission customers. The second issue concerns the transmission loss  
16 factor adjustment that I presented in Direct Testimony. I am presenting a refinement to the  
17 calculation I included in my Direct Testimony.

18

19 **Non-Owned Wind Generation Integration Costs**  
20

21 **Q. PLEASE EXPLAIN WHAT THIS ISSUE CONCERNS.**

22 A. The Company has chosen to charge retail customers for the costs of providing integration  
23 services to wholesale transmission customers that provide wind energy to non-PacifiCorp  
24 loads. The Company states that as an offset to these charges, it credits revenue  
25 requirements with PacifiCorp’s Open Access Transmission Tariff (“OATT”) Schedule 3  
26 and 3A revenues charged for Regulation and Frequency Response Service for network  
27 customers and generators that sell their energy off-system. The issue that the DPU and

**REDACTED**

28 UAE have raised, and that I am now raising is whether it is appropriate for PacifiCorp to  
29 charge retail customers for the cost of providing integration services to these transmission  
30 customers even though it also credits retail customers with Schedule 3 and 3A revenues.

31 **Q. WHAT POSITIONS DO GEORGE EVANS AND KEVIN HIGGINS TAKE**  
32 **REGARDING THIS MATTER?**

33 A. Both Messrs. Evans and Higgins believe that wholesale customers should be fully liable  
34 for the costs PacifiCorp incurs in providing integration services to wind generators that  
35 serve non-PacifiCorp loads. Mr. Evans recognizes that PacifiCorp asserts it credits retail  
36 customers with Schedule 3 and 3A revenues, but he notes that the “OATT charges fall short  
37 of completely covering the wind integration cost the Company includes in NPC”.<sup>1</sup>  
38 Therefore, Mr. Evans nets integration costs and Schedule 3 and 3A revenues, and he  
39 reduces revenue requirements by the amount that integration costs exceed Schedule 3 and  
40 3A revenues.

41 **Q. DOES MR. HIGGINS SHARE THE SAME CONCERN REGARDING NON-**  
42 **OWNED WIND INTEGRATION COSTS?**

43 A. As mentioned above, both Messrs. Evans and Higgins agree that wholesale customers  
44 should be fully liable for the costs PacifiCorp incurs in providing integration services to  
45 wind generators that serve non-PacifiCorp loads. However, Mr. Higgins does not agree  
46 that Schedule 3 and 3A revenue should be treated as an offset as compensation for the  
47 integration costs PacifiCorp incurs in accommodating the non-owned wind generation on  
48 its system. Mr. Higgins states, “Specifically, the OATT does not include any recovery of  
49 the opportunity cost of holding back reserves to support wind integration that are recovered  
50 in net power costs, but only includes the fixed (capital-related) costs associated with  
51 providing wind integration to wholesale customers.”<sup>2</sup> Mr. Higgins draws a distinction

---

<sup>1</sup> George Evans Direct Testimony, page 9, line 121.

<sup>2</sup> Kevin Higgins Direct Testimony, page 38, line 757.

52 between the “opportunity cost of holding back reserves to support wind integration” and  
53 the “fixed (capital-related) costs”. In other words, not only does PacifiCorp incur real time  
54 operational costs when wind resources generate energy, but PacifiCorp also incurs fixed  
55 costs associated with capacity that must be available as reserves to back-up the wind  
56 resources given the intermittent nature of wind. Mr. Higgins’ point is that Schedule 3 and  
57 3A revenues compensate PacifiCorp for the fixed capacity costs, but not for the real time  
58 operational costs that are incurred. Therefore, in developing his adjustment, Mr. Higgins  
59 removes the entire integration cost associated with non-owned wind generators, and does  
60 not net out the Schedule 3 and 3A revenues.

61 **Q. DO YOU AGREE WITH MR. HIGGINS?**

62 A. Yes I do, and in fact, this is the same position the OCS took in the last General Rate Case  
63 (Docket No. 11-035-200). Mr. Randall Falkenberg, on behalf of the OCS, explained that  
64 the FERC OATT revenues were only intended to recover fixed costs associated with wind  
65 integration services, not the variable production cost impacts caused by the non-owned  
66 wind farms.<sup>3</sup> Furthermore, in response to UAE 3.5, the Company agreed and stated the  
67 rates “...do not include variable net power costs (NPC) component costs. The rates are  
68 based upon the fixed capital costs of the generating units associated with providing  
69 Schedule 3 and Schedule 3A regulating margin reserve service to wholesale transmission  
70 customers.”

71 **Q. WHAT IS YOUR RECOMMENDATION?**

72 A. I agree with Mr. Higgins that the Commission should disallow recovery of the full  
73 integration costs that the Company has charged retail customers for the non-owned wind

---

<sup>3</sup> Randall Falkenberg Direct Testimony, Docket No. 11-035-200, page 15, line 370.

74 generation; however, I believe a small adjustment needs to be made to Mr. Higgins  
75 calculation.

76 **Q. WHAT ADJUSTMENT DO YOU PROPOSE?**

77 A. I believe that Mr. Higgins used the wrong wind integration cost in his calculation. With  
78 regard to the non-owned wind generators, I believe that the Company only charged retail  
79 customers for intra-hour wind integration costs, while Mr. Higgins included a charge for  
80 both intra-hour and inter-hour integration costs. My adjustment is \$.37 per megawatt hour  
81 lower than Mr. Higgins. The following table compares our two adjustments.

82 **Begin Confidential**

83

84

85 **End Confidential**

86

87 In summary, the Company's methodology requires retail customers to subsidize wholesale  
88 customers for the integration charges that non-owned wind generators cause, and the OCS  
89 adjustment, \$849,625 on a Utah basis, removes these charges from retail revenue  
90 requirements.

91

**REDACTED**

92 **Transmission Losses**  
93

94 **Q. PLEASE EXPLAIN WHAT THIS ISSUE CONCERNS.**

95 A. In developing transmission loss factors, the Company used a simple five-year average of  
96 calendar year losses from the period January 2008 through December 2012. In my Direct  
97 Testimony, I presented an adjustment (Adjustment No. 8) which used more up-to-date  
98 information, as I averaged calendar year losses from the period January 2009 through  
99 December 2013. Since filing that testimony I have requested additional discovery that I  
100 have used to refine my GRID calculations. Previously, I calculated an updated System loss  
101 factor and applied that equally to all jurisdictional load. I have now revised my calculations  
102 by developing individual loss factor adjustments for each state.

103 **Q. PLEASE COMPARE THE VALUES YOU USED IN THE DIRECT VERSUS**  
104 **REBUTTAL PHASES OF THIS CASE.**

105 A. The following table compares the state and System loss factors based on an average over  
106 the 2008 – 2012 time period and based on an average over the 2009 – 2013 time period.

107 **Begin Confidential**

110 **End Confidential**

111

112 In my Direct Testimony, I relied on data that covered the 2009 – 2013 time period, whereas  
113 the Company relied on load factors from the 2008 – 2012 time period. To adjust the  
114 Company’s load forecast, I developed a System Load Adjustment Factor, which was  
115 computed as the ratio of the System Average over the 2009 – 2013 period divided by the  
116 System Average over the 2008 – 2012 period, as follows:

117

[REDACTED]

118 I multiplied this load adjustment factor by the load requirements modeled in GRID for each  
119 hour and for each state to create the new adjusted load requirements. In my Rebuttal  
120 Testimony, I developed load adjustment factors the same way, but I improved the  
121 calculation by developing specific load adjustment factors on a state by state basis. As a  
122 result, I have now developed an improved load forecast by applying the above State Load  
123 Adjustment factors to the appropriate state load requirements modeled in GRID for each  
124 hour.

125 **Q. WHAT IS THE IMPACT OF YOUR REFINED LOSS FACTOR ADJUSTMENT?**

126 A. The loss factor adjustment that I previously recommended lowered net power costs by  
127 \$1,685,806 on a system basis, or by \$713,096 on a Utah jurisdictional basis compared to  
128 the Company’s April 10, 2014 updated filing. Now, using the improved calculation, the  
129 Company’s net power cost from the April update is reduced by \$1,310,725 on a system  
130 basis, or by \$554,437 on a Utah jurisdictional basis. This reflects a small reduction in the  
131 adjustment that I had previously recommended, however, this is now based on an improved  
132 adjustment calculation.

133 **Q. WITH RESPECT TO THE TWO ADJUSTMENTS DISCUSSED ABOVE, IS THE**  
134 **OCS PROVIDING AN UPDATED BALANCING ADJUSTMENT AND THE**  
135 **RESULTING REVENUE REQUIREMENT IMPACT AFTER FLOWING**  
136 **THROUGH THE COMPANY’S JURISDICTIONAL ALLOCATION MODEL?**

**REDACTED**

137 A. At this time the OCS is only presenting the net power cost impact of these two adjustments.  
138 The OCS will perform a final balancing adjustment and the corresponding impact on  
139 overall revenue requirements after flowing through the Company's Jurisdictional  
140 Allocation Model at the time it presents its Sur-Rebuttal Testimony. At that time, the OCS  
141 will include all other adjustments and any other changes resulting from its review of the  
142 Company's and other Parties' Rebuttal Testimony.

143 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

144 A. Yes it does.
