Additional charges to Net Metering (solar cogenerating) customers isn't in the public's best interest. The installation of Solar panels shouldn't be discouraged.

1. Solar power makes significant reductions in emissions from power plants which improves everyone's air quality.
2. The power generated by solar systems never leaves the neighborhood so there is much less transmission loss. This is an additional savings for Rocky Mountain Power.
3. The minimum fees should be waved for Net Metering customers as an additional incentive. They defiantly shouldn't be increased.
