I purchased and installed a rooftop solar system in my primary home to save energy. From what I understand Rocky Mountain Power's policy has been to encourage, endorse and reward capital energy saving devices that benefit the environment. Yet today Rocky Mountain power wants to charge me more in the form of a surcharge each month for my energy saving system. I find this hypocritical and unethical especially to those that would consider investing in such systems for the purpose of saving energy. Please do not permit them to impose this on energy and environmentally conscious customers. I ask that you oppose this duplicitous surcharge.

Thank you!
