To: psc@utah.gov

Ed and Teresa Dieringer at 2654 S 1500 E, SLC, UT 84106 oppose and request that you not approve Rocky Mountain Power's request for a rate increase of \$4.25 per month on Utah's RMP customers who contribute toward increased clean energy production and decreased pollution through production of Solar Energy to RMP's grid. Instead of penalizing and deterring the development of clean and renewable energy production, RMP needs to be supporting customers with rooftop solar installations. The benefits RMP and Utah gain from increased solar panel electricity production are enormous: improved air quality and health, cheaper / more efficient energy production when electricity is produced locally and panels are purchased and maintained by building owners (no RMP up front investment or maintenance costs), and improved economy and creation of jobs. It is time for RMP and Utah to make the fundamental shift of less reliance on low efficiency, 20th century technology that contributes to significant pollution, decreased health, and increased damage to the environment and economy to investing in a brighter and more vibrant 21st century and beyond by investment in clean, renewable energy production. Please do not allow RMP to penalize those Utahans who are taking the right steps of helping RMP and Utah to better manage its health, pollution, and economy.

Sincerely,

Ed and Teresa Dieringer
3654 S 1500 E, SLC, UT 84106
