Dear PSC,

I wanted to give my opinion on Rocky Mountain Powers attempt to impose a fee on residents installing solar in Utah.

By imposing a fee we will be discouraging home owners from installing solar on their roof. As a society we should be working towards making life easier for the people and reaching a goal of being free of energy scarcity.

The sun releases enough energy every day to power the entire world for a year. Yes technology is still a bit limited to maximize that potential, but technology is good enough to provide individuals their personal energy needs. Considering all the benefits of solar and the adoption trends throughout the world, we should reject solar fees. We should work towards providing every citizen with solar, free ourselves from polluting, finite, energy resources, and work towards a better future for all.

Thanks for listening to my opinion and taking it into consideration.

Best Regards,

Natan Chetrit
