To whom It May Concern,

I am a Rocky Mountain Power user who put solar panels on my roof so as to cut my power bill. In doing so Rocky Mountain Power now wants to increase my service fees. They are attacking those that want to save money. I am totally against this idea. I generate extra power for Rocky Mountain Power and they do not appreciate this effort on my part. If anything they should be paying me monthly for this. They do give me credits but not at the same value that they charge for me using their power. They also won't pay for some of my cost for investing in an alternative energy source unless I win a lottery that they hold once a year in January. What a croc of an excuse for getting out of paying people. Waren Buffet, who owns Rocky Mountain Power should not be trying to gouge people for their innovative thinking. Don't let the bullies of energy win.
