To the Public Service Commission - Concerning Rocky Mountain Power's request to increase rates for solar panel customers:

As a solar panel customer we already pay a \$5.00 fee each month for having solar panels and remaining on the grid. We must pay this fee even if we produce all the electricity we use that month. (We don't produce enough each month).

Most states have laws that require the electric companies to buy back the extra electricity produced by home solar panels - Utah does not. Therefore Rocky Mountain Power is already ahead financially of most electric companies when it comes to solar power customers.

I feel it is very unfair to target those who are trying to save energy by producing their own clean energy, or at least a part of it. How can it be fair to charge one customer one rate and another customer a different rate?

I hope that you will not increase rates just for solar panel customers.

Sincerely, Mrs. Linda K.
