I want to comment on the request by Rocky Mountain Power for a rate increase for solar panel customers. I heard on TV that they want the increase to insure that we pay our "fair share". I believe that RMP provides electricity to Idaho and that solar panel customers that over produce are paid for the excess electricity they produce and are not charged a higher rate. I respectfully request that you do not approve their request for a rate increase and make them pay for the excess electricity we produce. Thank you. Daniel L Weatbrook Garland,Utah
