P.S.C Commission :

We do not have solar panels, nor do we have any wind power. Rocky Mountain Power has said over and over again, to save on power bills by cutting power during peak hours, now they want to get paid for something that saves them power.

This is just plain wrong !! It would save them money and use less power, it would save them money on their infrastructure.

Not to speak of how much cleaner our Utah air would be, the wind farms and solar panels are the best things we can do for our state and our world ! Rocky Mountain Power is using both of these as a money grab ! Please do not let this sir charge take place. Our power bill went up \$25.00 per month earlier this year, they are a very rich company and they don't need to keep those who can afford solar panels from going green, it saves us all !!

Thank you
