13-035-184

Dear commissioners,

Please consider this letter as a follow up letter to the one that I previously sent. And I would like to request for you to please re-read my original letter so that these two letters will be fresh on your mind as you make a decision regarding the Rocky Mountain power rate increase and the solar power fee issue. When I attended the public hearing and was on the stand trying to make a statement. I pretty much froze up because I was so nervous and had so many thoughts that I wanted to share. That is the reason for this follow up letter. If you recall, as I said before when I was on the stand. Wouldn't it be refreshing if none of us (the people) had to be there. If we held the commissioners in such high esteem and had such great confidence that they would do the right thing in the peoples interest first and not some corporations. Sadly this is not the case. The fact that any of us had to be there in the first place should serve as a strong indicator that you are not doing whats right. There is a twisted philosophy in the PSC that both parties must be equally considered and represented. First of all, the people are not equally represented by the PSC. I would say the people are represented 25% of the time, and RMP is represented 75% of the time. To PSC logic this is considered fair. Also, the PSC philosophy of taking from the poor and struggling and giving to the rich is an incorrect principle. Your decisions directly reflect how you feel about the people and how you feel about corporations. Your decisions also greatly reflect on your own personal character. Are you truly men of and for the people or have you sacrificed your integrity in the name of your job ? RMP only cares about profit. They do not care about people. Look at what they are trying to do to the people that have or want solar power. This is the mentality of RMP. There are people that want to lighten their draw on the power grid as well as take the sting out of ever increasing rates. Don't punish or oppress. Reward or, at the least, leave us alone. It gives me no pleasure in taking you men to task. I am sorry that I had to say that I have little or no confidence in you. Remember, trust is earned not bestowed. When you hurt people and make wrong decisions. When you offer lip service to the people and then add insult to injury by giving poor representation for us, while giving excellent service and representation to RMP. It is you, that tarnishes the peoples trust and confidence in you. "People over politics and profit". That is whats right. Please deny them the rate increase and the ill conceived solar tax / fee. You are in a unique position to hold RMP to a higher standard. Especially when they want something from you. They don't even have the integrity or respect to even ask the people. What they want is to take without asking and they need your approval to do it. Are you getting a sense of the immoral and unethical implications of the position your in ? Keep them honest. Keep their greed in check and don't let them baffle you with their B.S. There are thousands of struggling households that are in alot worse shape financially than this huge corporation. Please renew and restore the peoples trust and confidence in you. God bless.

Sincerely,
Mr. Beglarian
