Subject: Docket 14-035-114

Dear Commissioners

Clean air in Utah and the country must be a priority for every one. You are in a position to do something about this. Please address the economic and environmental costs of burning carbon.

Solar is a part of the solution. The use of solar should be supported and encouraged by everyone. Use by all solar customers needs to be evaluated--residential, commercial, governmental, and any other non-residential use.

Hopefully the data and information that is used will be developed by an independent source, not one with a vested interest. Accurate, sound and transparent studies are needed. These studies need to be made public, the outcomes impartially evaluated , and timely decisions made.

The commission's attention to this vital issue will be appreciated by all of us who are affected by the air quality in our communities.

Thank you for your consideration.
