Dear Commissioners,

I testified at the July 2014 hearing and sent emails explaining that as a net meter customer of RMP, as a concerned citizen of Utah and our air quality and as a concerned steward of our mother earth, I opposed the proposed solar surcharge. I still do. Please ensure that RMP's solar cost/benefit study address the economic and environmental costs of burning coal and the costs solar helps avoid. Please make sure they include all solar customers in the study, not just residential. Non-residential and commercial solar customers contribute, too. RMP should also be required to use independent researchers to gather and analyze the data.

Thank you for your time to hear out testimonies. I know we kept you up until 11PM and we are grateful.
