Dear Sirs of the PCS, it's getting more and more difficult to breath in Utah. Our air quality has progressed from bad to worse. We can no longer move away to "get away" from the poor air we have to breath. It wont be long before we have to wear filter masks every time we go out side. But, we can do something about it. We can choose to use alternate energy like solar, wind, and hydro. We can drive electric cars powered by solar. But we can't keep footing the bill of solar, wind, and hydro if we keep getting kicked by Rocky Mountain Power and other legislation/regulation making these alternate power sources cost prohibitive. As you consider the energy demand study suggested by Rocky Mountain Power, please consider the full and fair cost-benefit of Solar, Wind, and Hydro. Make these benefits apart of this study. Consider the full impact on our air quality if we lose and/or penalize those who want a cleaner energy solution and for the most part, have been paying for that choice up front.

Sincerely,
Sally Buttars
