Dear Commissioner White,

Please don't make it more difficult or expensive to start using solar energy. Solar give consumers energy choice, and if we can individually move away from burning coal as our primary power source it is better for the environment, our air that we breath and better in general for the planet. Don't let Utah be the first stat to eliminate net metering. RMP should not be allowed to levy unpredictable charges on solar customers because they have their own business interests in mind. Solar can bring clean jobs to our state.

Sincerely,

Brenna Hayes

Dear Commissioner Clark,

We just went completely solar in December. Last month alone we reduced our carbon footprint by 1219 pounds! We put over 800 kWh back into the grid for someone else to use! Can you imagine how much we could improve on the "inversion" problem here in Utah if more people had solar? We are environmentally conscious and last month alone saved the equivalent of 14 trees! Don't our children and grandchildren deserve preservation of our environment? Don't the residents of Utah deserve clean air? It's time to put the environment FIRST and the greed of utility companies second. Let's reduce pollution, quit using fossil fuels to produce energy and make it a better world!

Sincerely,

Linda Kelly

Dear Commissioner Clark,

We installed solar on our home because it was the right thing to do in this day and age. The environment is under continual attack with coal fired energy contributing immensely to global warming. Efforts to subdue or eliminate residential solar should not be tolerated by any rational citizen. Taxing solar appears to be merely opportunism. Please do all within your power to derail any efforts to discourage the growth of solar energy in Utah!

Sincerely,

kevin kelly

Dear Commissioner Clark,

Solar energy should be supported 100% by retaining the current energy strategy or improving it so that homeowners who invest in solar get fair remuneration for the energy produced by their investment. President Obama has noted that climate change is real, is man-made, and needs to be addressed now or the ability of future generations to address it effectively will become much harder or even impossible. Please view "Six Degrees", get updated on the climate change issues and respond to them by endorsing the reasonable support of homeowner-generated electric power.

Sincerely,

Martin Willcocks

Dear Commissioner Clark,

I have solar panels on my roof. I don't mind paying taxes and I don't want to be a burden on the system. Why can't we find a way that I can sell my power to the highest bidder on the spark market trade? I would receive income for my production, which would be taxed. Let's let RMP facilitate the trade for a fee. That way I make money, the state makes money and RMP makes money. And their natural resource dollars are injected straight into the economy at the local level, which produces more taxes.

Sincerely,

Tyler Pitcher

To: drexclark@utah.gov

Dear Commissioner Clark,

We have recently installed solar panels at my church, and I have investigated the possibility at my home. All Utahns need to seriously consider the use of solar power and its value in reducing the use of fossil fuels and the global warming/climate change that entails. We have plenty of sunshine in Utah summers, and could make a sizable dent in energy consumption from fossil fuels. The cost of installation is high, but many homeowners are willing to pay for their installations both in the interest of reducing fossil fuel consumption and using the free energy from the sun to provide most of their needs. I have previously written to the Salt Lake Tribune concerning the issue of net metering fees charged by Rocky Mountain Power, and they later decided not to charge for net metering. But now they are attacking Utah residents again with this new proposal which would eliminate their savings from going solar, and further to impose additional unspecified charges on customers - another way for big business to abuse ordinary folks in the name of corporate greed. I hope that you will deny Rocky Mountain Power's latest and all future attempts to eliminate the solar power incentives that are necessary to humanity's survival.

Sincerely,

Martin Willcocks

Dear Commissioner Clark,

I have been part of the solar industry in Utah for seven years. Without net metering and solar I would not have the ability to provide for my family. I strongly support the need for net metering and strongly support our right as citizens of this great state and country to chose where we or how we get our electricity. I feel that by taking this choice from us would be in direct violation of the constitution and would be a civil wrong doing. Please stand behind myself and my young family in voting to keep net metering in the great state of Utah.

Sincerely,

Chad Hofheins

Dear Commissioner Clark,

Please keep net metering on solar power in place in Utah. People need to have a choice when it comes to power and people need incentives to buy solar and thereby keep energy rates lower for all Utahans. With cooler temperatures and still relatively long days I will likely produce more solar energy than I will use. This energy will go out on the grid for others to use and yes RMP will get money for it. Is it too much to ask them to give me a credit?

Dear Chairman LeVar,

We have recently installed solar panels at my church, and I have investigated the possibility at my home. All Utahns need to seriously consider the use of solar power and its value in reducing the use of fossil fuels and the global warming/climate change that entails. We have plenty of sunshine in Utah summers, and could make a sizable dent in energy consumption from fossil fuels. The cost of installation is high, but many homeowners are willing to pay for their installations both in the interest of reducing fossil fuel consumption and using the free energy from the sun to provide most of their needs. I have previously written to the Salt Lake Tribune concerning the issue of net metering fees charged by Rocky Mountain Power, and they later decided not to charge for net metering. But now they are attacking Utah residents again with this new proposal which would eliminate their savings from going solar, and further to impose additional unspecified charges on customers - another way for big business to abuse ordinary folks in the name of corporate greed. I hope that you will deny Rocky Mountain Power's latest and all future attempts to eliminate the solar power incentives that are necessary to humanity's survival.

Sincerely,

Martin Willcocks

Dear Chairman LeVar,

Please keep net metering on solar power in place in Utah. People need to have a choice when it comes to power and people need incentives to buy solar and thereby keep energy rates lower for all Utahans. With cooler temperatures and still relatively long days I will likely produce more solar energy than I will use. This energy will go out on the grid for others to use and yes RMP will get money for it. Is it too much to ask them to give me a credit?

Sep 7, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Ms. Jackie Hansen

Dear Chairman LeVar,

We just went completely solar in December. Last month alone we reduced our carbon footprint by 1219 pounds! We put over 800 kWh back into the grid for someone else to use! Can you imagine how much we could improve on the "inversion" problem here in Utah if more people had solar? We are environmentally conscious and last month alone saved the equivalent of 14 trees! Don't our children and grandchildren deserve preservation of our environment? Don't the residents of Utah deserve clean air? It's time to put the environment FIRST and the greed of utility companies second. Let's reduce pollution, quit using fossil fuels to produce energy and make it a better world!

Sincerely,

Linda Kelly
