Fri, Nov 18, 2016 at 5:03 PM

Reply-To: tareq.butler@avasatellite.com

To: pscs@utah.gov, psc@utah.gov

Dear utility commission,

I am a sales person for a solar company. The current proposals by rocky mountain power in their entirety would make it impossible to sell solar. Ninety nine percent of everyone purchases solar because it is less expensive than paying a full bill with rocky Mountain solar. A small additional connection fee of possibly \$10 total instead of the current connection fee would be OK but any of the other measures would kill it. I calculate based on their proposals that an average 5kw household would pay \$60 in additional fees. The Phoenix area implemented similar measures and it destroyed all solar sales. Nevada implemented similar measures and it killed the industry.

Nevada Energy stated it would have minimal effect. This was entirely untrue. Solar doesn't exist without net metering at a one to one rate and a low connection fee.

I sell 5 to 9 rooftop solar customers per week and not one of them would have moved forward with the project with rocky mountains current proposals.

This will mean our company and all the other solar companies will go out of business and all of us will be laid off.

Rocky Mountain is frustrated that they are not making mass profits off of each customer even though the customer is relieving them having to produce the energy on their own.

My customers are frustrated by the greed of rocky Mountain power and having difficulty paying their bills.

All the best in your decisions,

Tareq Butler

## Solar rate schedule

1 message

---

**Eric Anderson** <eanderson@quantacrm.com>

Fri, Nov 18, 2016 at 5:16 PM

To: "psc@utah.gov" <psc@utah.gov>

I just want to make my voice heard. We own solar panels and made the investment because global warming/climate change/air pollution is the biggest threat to our world, nation, and more specifically – those of us living in SLC.

It would be ridiculous and completely ignorant to remove any incentive currently in place for solar panel owners. Please think about our future and our children when making this decision. That's all I can ask. There have been extremely alarming reports in the last few days (scientific/fact based reports) concerning the arctic sea ice. If we continue to rely on fossil fuels for the majority of our energy, our children and/or their children will have no future. That is an absolute fact.

Thank you for your consideration.

For information on the Arctic Sea Ice: <http://nsidc.org/arcticseaicenews/>

Thank you,

Eric Anderson

## Rocky mOuntain Power Proposal

1 message

---

**Jeffrey Jones** <jeff.jones@vivint.com>

Fri, Nov 18, 2016 at 5:32 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Hi,

I am a concerned citizen regarding this move by Rocky Mountain Power to keep solar from expanding and continuing its move towards affordability for the masses. We have a growing market sector which is creating jobs and ultimately will help improve air quality by less coal burned AND less gasoline burned with the increasing popularity of electric vehicles. Haven't we complained about job creation AND air quality?

Yet, mass transit is still more expensive than driving a truck to and from work (at least for me and a majority of people I work with). I think it is a credit to policy makers in Utah that we boast low unemployment, low government debt, and a place where companies can start up and flourish. Reducing energy dependence on coal and oil would seem to take us out of the world's cess pool of problems and allow us to control our own destiny. However, it seems like we as Americans want change except when good change for ALL affects us in a negative way. True free market principles need to be allowed to work their magic. This is NOT the way to do it, in my view. I hope that you will consider voting against this action and side with innovation.

Unfortunately where I live, Strawberry Electric is already limiting what one can do with solar and I am not happy about it. I would like it not to happen with customers of Rocky Mountain Power.

Thanks for your consideration.

Jeff Jones

## Rocky Mountain Power rate proposal

1 message

---

Jeff Jerabek <jeff\_jerabek@q.com>

Fri, Nov 18, 2016 at 6:49 PM

To: psc@utah.gov

Dear Ms. or Mr.

I am opposed to the recent rate proposal of Rocky Mountain Power (RMP) to penalize future solar installations.

Although I have been interested in solar panels on the house for some time, within the last month I have been pursuing Solar City for specifications and costs. I have put that all on hold till I see what becomes of this new rate proposal.

- 1) I believe there is already a "user fee" on my monthly invoice. If I do not use a single kilowatt of power I still will be charged a minimum fee. I do think this is fair. I have the luxury of using their system or not. RMP provides an indispensable product.
- 2) I would re-evaluate my solar project, and possibly still go forward, if the state would discontinue the \$2,000 rebate but not change the rate structure. But hopefully both will stay intact in their present form.
- 3) The recent rate proposal, if passed/accepted by the PSC, would definitely stop any solar install for my property. I believe in renewable energy but I need to see a payback within the material's lifetime.
- 4) If the proposal is rejected in its entirety, would RMP be able to wait one cycle and submit another proposal again? Hoping to beat us down until we give in?
- 5) Why fabricate a problem when there is none? Even if solar installations double each year, after 10 years, this will still only be approximately 2% - 3% of the customer base.

This proposal would slow down improvements in air quality and take a step backwards in the development of clean energy.

Utah is situated wonderfully for solar applications. This is a great selling point for future businesses to assess when looking to relocate or expand to Utah.

Thank you for your time.

## Solar power

1 message

---

**Stuart Loertscher** <masterballer@icloud.com>

Fri, Nov 18, 2016 at 7:57 PM

To: psc@utah.gov

I just recently got solar panels. One of the reasons we were able to do it was because of the tax incentive. I was very sad to hear that Rocky Mountain power is trying to stop making solar panels affordable. I thought we were making a good choice for the environment and energy costs to get panels. And yet Rocky Mountain power is trying to stop and it looks like the solar companies from making a business. Is this all about Rocky Mountain power losing revenue instead of saving energy. Renewable energy needs to be allowed to help create renewable energy and not be punished or discourage others from making a good choice. Why are consumers being punished for using solar power when there's always talk of Energy demands and not enough to go around.

Sincerely

Kayle and Jill Loertscher Taylorsville Utah

## Solar - say NO to rocky man power

1 message

---

**Kay Williams** <kaythegolfer@yahoo.com>

Fri, Nov 18, 2016 at 8:13 PM

To: psc@utah.gov

Dear PSC Representative,

I am writing today in regards to the proposal submitted by Rocky Mountain Power to create a new method for calculating, and raising, net-metering on household with solar installations.

I do not believe households wishing to utilize solar should be financially penalized for doing so, whether their reasons for doing so are based on cost effectiveness, sustainable energy practices, or both. Additionally, I do not feel it wise to create deterrents for those seeking more sustainable practices.

I ask that you do not accept Rocky Mountain Power's current proposal.

Thank you,[Sent from Yahoo Mail for iPad](#)

## Proposed changes to solar energy systems

1 message

---

**J R** <pocopatro@icloud.com>

Fri, Nov 18, 2016 at 9:49 PM

To: psc@utah.gov

To whom it may concern

I am currently looking into the proposed changes that RMP has asked for on solar installs. I currently have solar panels on my house and they have been running for two years. What I am seeing in this proposal is highly unjustified. RMP is trying to punish those of us who have and/or want to install panels on our own roofs. What they are proposing is bad for everyone but their own pockets this needs to be rejected. I would hope that the avenues of solar and other renewable energy sources will stay open and viable

Thanks

Jay Randall

## New rate schedule for solar power proposed by Rocky Mountain Power

1 message

---

**Jackie** <jackiebski@gmail.com>

Fri, Nov 18, 2016 at 9:56 PM

To: psc@utah.gov

Please know that my husband and I are not current users of solar power, however we plan to have solar power installed in our next home and strongly support solar and alternative energy. I am very much against the rate increases for solar power proposed by Rocky Mountain Power as the environmental and health benefits of solar power must be factored in to the equation. Coal and oil have been subsidized for decades, and I don't believe "the training wheels" have ever been removed from those industries. Utah's legislature seems to be able to come up with money for lawsuits to contest ownership of federal lands, to build coal ports and last session even created a "special fund" for a "pie in the sky" water infrastructure program which everyone knows would ultimately fund a ridiculous water pipeline. Why can't Rocky Mountain work with the legislature for subsidies for any monetary shortfalls incurred with solar? The population, congestion and need for energy is going to increase dramatically along the Wasatch front in the next few years. We need to do everything possible to encourage more solar energy to mitigate the negative impacts of this growth. NO TO ANY RATE INCREASES ON SOLAR!

Most Sincerely, Jacqueline Breslawski

**14-035-114, RMP request to alter net metering rates**1 message

---

**Jan Lawrence** <millbrk@xmission.com>

Sat, Nov 19, 2016 at 7:09 AM

To: psc@utah.gov

It may be too late for this comment, but I want it on record anyway . With respect to this request to increase rates for net metering, it seems that the arguments made by Rocky Mountain Power have almost entirely to do with management of the power grid during peak and of peak hours, which is exactly what they are paid to do. I have read through the testimony of the RMP experts and can see that this transition is disruptive to their system management, but no amount of difficulty will save us from the ultimate price we will be paying (and in the very near future) if we do not reverse the effects of greenhouse gases and global climate change.

I am not yet a rooftop solar system owner, but plan to be very soon. My husband and I have been preparing and researching for this transition for two years. I have purchased Blue Sky power from RMP since it became available. If you do not continue to support the transition to cleaner, renewable energy in whatever form it comes, our planet is literally cooked. The latest news this morning shows the polar ice cap was 36 degrees warmer than it should be at this time of year. The clock is ticking and we have to act. The rooftop solar system owners are still far too few to be anything but in inconvenience to RMP. We paid them a substantial, up front fee when this house was built only 6 years ago. My husband and I have no children or grandchildren, so we are doing this to save YOUR family

The poor air quality in Utah is costly in terms of the health of those who live here. I myself suffer from asthma which becomes a significant health issue for me during the winter. There is no reason that RMP cannot figure out how to manage these systems coming on line and for all of our sakes, they have to embrace this change.

I do not support any increase in rates that will slow the transition to solar . I trust that RMP will find a way to manage the demand issues. Thank you.

### Impact To Our Community

Rocky Mountain Power's proposed rate increases will have a direct, negative impact on our community in three specific ways:

Bad for consumers – This is an unfair move by a monopoly to punish Utahns who are trying to save money via residential solar. The new rate changes will almost triple the amount of time it will take these consumers to break even on their solar investment.

Bad for air quality – This measure makes it clear that Rocky Mountain Power cares more about its own bottom line than it does for our community and the health of Utah residents. Utah has one of the worst air quality conditions in the country and solar is part of the solution.

Bad for business – This move is particularly dangerous because Utah is such a pro-business state and the residential solar industry has been one of the largest and strongest sources of job generation over the past 5 years. Given the impact this new rate increase will have on customers, the impact on solar jobs focused only on Utah customers will be devastating.

PublicService Commission &lt;psc@utah.gov&gt;

## proposed rate change for net metering by Rocky Mountain Power

1 message

---

**Paul Farnsworth** <pbfarnsworth@gmail.com>

Sat, Nov 19, 2016 at 8:27 AM

To: psc@utah.gov

Dear PSC members:

I am writing to express my concern about the rate changes proposed by Rocky Mountain Power for net metering customers. I purchased solar panels this year, so for now, at least I would not be directly affected by the change. I think it is clear, however, that the proposed changes will remove almost all incentive to install rooftop solar, and that the state and the public will be losers in the long run. Some of the claims made by Rocky Mountain Power are simply not credible. At best they are based on averages that mask a number of important details.

Rocky Mountain Power claims that my bill is being subsidized to the amount of \$400 per year by non-solar customers. For me, that would amount to almost half of what I was paying before I installed my panels, and it suggests that half of what I was paying was not for consumption, but rather for infrastructure. If that is the case, then why aren't the bills for all customers laid out to directly charge for infrastructure?

Rocky Mountain Power's justification for peak usage charges are based on annual averages. What matters more is demand during summer, when demand is the highest. They begged me for years to install a cool keeper on my air conditioner so that they could manage peak demand on hot days. My rooftop panels cut my demand much more effectively than a cool keeper, reducing it to zero on all but the hottest days.

Rocky Mountain Power claims that solar users depend on the grid for 23.99 hours in a day. Where does that number come from? Particularly during the summer I am a net producer for most of the daylight hours. Maybe there is a surge for a second when I turn on a motor, and they count that as demand for the hour in which it occurred. The number doesn't make sense.

It would be interesting to see an analysis of how Rocky Mountain Power came up with its costs for power from solar farms. Did land purchase prices factor in? Did they consider transmission losses? Are they using the same accounting methods that they use with their fossil fuel plants?

As a person who deals with numbers for a living, I know that it is possible to pick and choose data to fit a particular point of view. I am deeply distrustful of Rocky Mountain Power's motives in this case, and I think that you should be as well. They are faced with a loss of demand for their product and are acting to ensure that they control the supply.

Finally, although the decision to install solar power made sense for me under the current rules and with existing tax incentives, I was also motivated by a desire to reduce the air pollution in the intermountain west caused by the burning of fossil fuels and a desire to reduce my carbon footprint. The problems of dirty air in Utah are obvious to anyone who breathes, and as a PhD scientist, I am convinced that the threat of man-made climate change is real. These external costs that are not factored into Rocky Mountain's calculations should be, and it is appropriate that the consumers of power generated by fossil fuels pay more than those relying on and generating clean power.

I hope that you will deny this request from Rocky Mountain Power and insist on a rate structure that is fair and reflects all of the costs of power production.

Sincerely,

Paul B. Farnsworth

## punitive actions on solar customers

1 message

---

**George Compton** <snow.compton@gmail.com>

Sat, Nov 19, 2016 at 9:03 AM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Why would you punish someone for doing the right thing? Of all the places in this country that needs clean energy , the Wasatch Front in Utah should be at the top of the list. I am in the process of installing solar electric and I am doing it not just for economic reasons. I am also motivated by my social conscience. I want to breathe cleaner air and I want my kids and grandkids to breathe cleaner air. When the "bottom line" is all that matters, we all suffer. You must not let RMC punish responsible citizens who are doing the right thing. Reject these punitive measures.

PublicService Commission &lt;psc@utah.gov&gt;

## RMP's proposed rate schedule

1 message

---

**Bob Plachta** <bob48plachta@yahoo.com>

Sat, Nov 19, 2016 at 9:03 AM

Reply-To: Bob Plachta <bob48plachta@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

I am writing the PSC to voice my strong opposition to Rocky Mountain Power's recent proposal to implement a rate schedule that would effectively eliminate future installations of residential rooftop solar systems. This proposal fails to acknowledge the many benefits of rooftop solar for air quality, elimination of greenhouse gases, etc. If solar power was as ineffective as RMP complains, due to such claims as it provides power at the wrong time of the day, why does RMP continue to invest in its own massive solar power projects?

I do believe that a study should be conducted to determine the true costs, benefits, and impacts of residential rooftop solar power installations and rate structures developed to assure all rate payers are charged fairly. But RMP is obviously not an impartial body to conduct this study, so an independent and impartial body of experts should conduct such a study and consider all of the costs and benefits of rooftop solar, and then rates can be honestly developed and adjusted to reflect the true impacts and value of rooftop solar.

Robert Plachta

## Rocky Mountain Power/Roof top solar

1 message

**ANDY** <mrandywhite@msn.com>

Sat, Nov 19, 2016 at 9:09 AM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

It is entirely reasonable for Rocky Mountain Power (RMP) to include a basic infrastructure charge in my contracted electricity bill, but that charge should not be higher for customers who use roof top solar . If anything it should be less as we use the grid less and provide RMP with our excess from capital investment in which they did not participate.

I have no problem paying my "fair share," which I always thought was my "basic charge."

Will they next want to add a penalty fee for those who conserve to the point their bill goes below a certain minimum or "shut off all the lights" for a couple of months to take the kids to spend time with grandma and grandpa?

RMP needs to look to the future and act in the long term best interest of the whole village.

Andy White

**Docket 14-035-114 : Rocky Mountain Power Solar Rate Proposal**1 message

---

**Roland Bernabe** <rolandbernabe@hotmail.com>

Sat, Nov 19, 2016 at 10:13 AM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Hello,

I am against this proposal.

The following are my comments on docket number [14-035-114](#).

I have been a part of the Rocky Mountain Power (RMP) Blue Sky program since its inception, I discontinued this participation this week because of this proposal by RMP.

I find the proposal completely one sided in favor of maintaining a hold on a power system that needs to be updated. The benefits for RMP are not discussed only RMP's claimed costs. For instance, what happens to the excess electricity produced during the summer months when rates are highest and the fuel cost for the residential solar power are \$0 ??? I looked into using the RMP solar program, but found that my bill would increase even though the fuel costs for solar are zero. I understand the capital investment but this can be depreciated over 25 years.

I am currently having solar panels installed and would not be affected by this current proposal. Per an article in the SL Tribune this proposal will affect 4000 jobs in this state by effectively making residential solar a non starter for new customers.

I would recommend that a study be made of Hawaii Electric since they have the highest penetration of residential solar in the nation at ten percent of all residential customers. Hawaii Electric manages to cover costs for the \$9 fee.

I would also recommend that the committee look into national security matters for our electric grid. See [www.energy.gov](http://www.energy.gov) "Large Power Transformers and the U.S. Electric Grid" April 2014 update. In looking at Hawaii Electrics evolution , I believe they will have a more reliable and more secure power grid in the near future. This will create more jobs and help our national security . Please continue to bring Utah forward in the evolution of our national power grid by showing the nation how to evolve its power grid.

Thank you,  
Roland Bernabe

## solar fees

1 message

---

**Melinda McIlwaine** <lindilu2@gmail.com>

Sat, Nov 19, 2016 at 11:20 AM

To: psc@utah.gov

Dear Commission:

I am writing to you in regard to Rocky Mountain Power's request to levy fees on home owners that have installed solar on their homes. Eight years ago I could not afford to make a solar installation on my roof. Now it is feasible because costs have come down. If Rocky Mountain Power is allowed to implement the fees they are requesting it will deprive me of this opportunity. You are the ones who stand between a bright, clean energy future and a barrier to the same. The utility should be leading the way to cleaning our air by retooling our power grid. I respectfully request that you DO NOT approve Rocky Mountain Power's request. The state has made the argument that removing solar tax credits will give \$20 million to our schools. In the meantime they have invested \$53 million in the coal port fiasco and given Goldman Sachs (who you may recall contributed to the 2008 recession) another \$47 million tax credit. Is this politics as usual in Utah? Will you, as a consumer commission protect our interests in a healthy environment?

Thank you for your time.

To: psc@utah.gov

Dear Commissioners,

The RMP analysis of rooftop solar focuses on costs and ignores benefits both to ratepayers and to the utility itself. PSCs in other states have found a net benefit from solar. Minnesota found that solar customers generated \$36 million in excess benefits for the utility.

Perhaps you should commission a ~~fair~~ independent study of the costs--and benefits--of rooftop solar in Utah. That would be far better than going along with RMP's ~~efforts~~ to sabotage solar by a divide and conquer approach that pits regular users against solar customers.

Best regards.

## Solar Panel Monthly Rate Increase

1 message

---

**barberBFI** <barberbfi@comcast.net>

Sat, Nov 19, 2016 at 12:37 PM

To: psc@utah.gov

To whom it may concern,

I am writing today about the solar panel monthly rate increase. Several years ago my husband and I chose to put in solar panels to alleviate our prospective outlay of our fixed income. This would help with our increasing medical bills due to our age. My husband has died and my income of course is less since his death. So my continued use of solar panels has helped with my new fixed income.

I also feel very strongly that these solar panels that I have help the health of the planet and health of n family, including grandchildren and great-grandchildren. I would also like to help with what I perceive as global warming and make Utah a self-sufficient leader in alternate energy

From,  
Eva Daniels

## Oppose Rocky Mountain Power Rate Increase for Net Meter Homeowners

1 message

---

**Steve Caldwell** <steveatparkcity@yahoo.com>

Sat, Nov 19, 2016 at 1:12 PM

Reply-To: Steve Caldwell <steveatparkcity@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

I would like to register strong opposition to RMP's proposed new rate structure. The RMP financial analysis is clearly flawed and does not take into account the environmental and health benefits of homeowner generated solar power. The problems with RMP's proposal are most clearly evidenced by the fact that in at least some cases a homeowner who is generating at least part of the power he uses would pay a higher monthly bill than someone with the same usage who is relying completely on the grid. This is clearly an absurd outcome. You should at a minimum require a more complete and accurate financial analysis before considering changes to the rate structure.

## Rocky Mt Power rate schedule

1 message

---

**Cathy** <kelnergeo@gmail.com>

Sat, Nov 19, 2016 at 4:40 PM

To: psc@utah.gov

I urge you to deny Rocky Mountain Power's proposal to implement a rate schedule that would exponentially increase the monthly bills for homes with rooftop solar energy panels. This increase would effectively kill any incentive for investment in alternative energy sources. We should have continued incentives for non fossil fuel energy. Our air in SLC as well as our unsustainable dependence on dirty coal is only going to increase if alternative energy sources are punished with rate hikes like those RMP is proposing. Please oppose their proposal.

Respectfully,

George Kelner

Dear Sirs,

I am against the rate increase by RMP for net meter users.  
The air along the Wasatch Front is not healthy. I am truly concerned about our children and higher risk adults.  
Let us work together for cleaner air.

Sincerely,

David J & Sammi G Tall

## Solar proposal

1 message

---

**GMAIL** <adamcoomer@gmail.com>

Sat, Nov 19, 2016 at 7:57 PM

To: psc@utah.gov

Rocky Mountain Power's proposed rate increases will have a direct, negative impact on our community in three specific ways:

Bad for consumers – This is an unfair move by a monopoly to punish Utahns who are trying to save money via residential solar. The new rate changes will almost triple the amount of time it will take these consumers to break even on their solar investment.

Bad for air quality – This measure makes it clear that Rocky Mountain Power cares more about its own bottom line than it does for our community and the health of Utah residents. Utah has one of the worst air quality conditions in the country and solar is part of the solution.

Bad for business – This move is particularly dangerous because Utah is such a pro-business state and the residential solar industry has been one of the largest and strongest sources of job generation over the past 5 years. Given the impact this new rate increase will have on customers, the impact on solar jobs focused only on Utah customers will be devastating.

## proposed regulations by Rocky Mountain Power

1 message

---

**Tobias Brand** <tobra-74@gmx.de>

Sat, Nov 19, 2016 at 9:24 PM

To: psc@utah.gov

Hello,

I am writing to you to voice my opposition to the proposed changes by Rocky Mountain Power in regards to residential net-meter customers in Utah.

Because individuals chose the something quite high expense of private solar panels, the entire community benefits.

Benefits are amongst others

- 1) better air for everyone as less energy has to be produced by burning dirty fossil fuels
- 2) Rocky Mountain actually benefits as well as their peak demand for electricity is flattened and therefore their capital expenses for more capacity is reduced or at least pushed back.
- 3) there are several studies that show that "homes and businesses that turn to solar energy tend to provide more benefits to the electric grid than they receive from net metering". This quote is from the bipartisan Governors' Wind & Solar Energy Coalition. (<http://www.governorswindenergycoalition.org/?p=19323>)
- 4) think of residential solar installation in the same way as paying for education: the entire society pitches in through paying property taxes, regardless of how many children -if any- one family sends to public schools.

Recent changes to net metering agreements in Nevada resulted in a complete dying-off of the solar industry in the Silver State and that's all Rocky Power Mountain seeks to accomplish with this damaging proposal.

Regards,

Tobias Brand  
3555 Hermes Dr  
SLC, UT 84124

P.S. I further request, that the public comment period will be extended beyond November 22, to give more concerned citizens the opportunity to voice their opposition or support respectively.

## RMP Rate Change

1 message

---

**CJ Barlow** <cj@edeals.co>

Sun, Nov 20, 2016 at 12:03 AM

To: psc@utah.gov

Hello,

I am writing to express my concerns about a rate change proposed by Rocky Mountain Power . There is strong potential this proposal would practically eliminate the 3,000 solar related jobs in Utah.[1]

In addition to the elimination of thousands of jobs, the use of solar is a key component for reducing our dependence on fossil fuels for energy production. This dependence causes our air quality to degrade. The American Lung Association's 2016 study gave failing air quality grades to 75% of the counties they studied in Utah.[2]

Allowing this proposal to pass would result in a negative impact, both physically and financially , for our state. The state would lose taxes generated by the solar companies in Utah.

We also pride ourselves on being entrepreneur friendly Allowing this to pass would signal to would be entrepreneurs that this is no longer the case.

I am asking the Commission to reject this rate change. Show our citizens that their businesses, and their health, matter . And that these things are more important than padding Rocky Mountain Power's bottom line.

Sincerely,  
CJ Barlow

## 13,842 signers: Save Solar for Utah - Affordable Solar Power in Jeopardy in Utah petition

1 message

Ryan Evans &lt;petitions@moveon.org&gt;

Sun, Nov 20, 2016 at 12:18 AM

To: Public Service Commission &lt;psc@utah.gov&gt;

Dear Public Service Commission,

I started a petition to you titled [Save Solar for Utah - Affordable Solar Power in Jeopardy in Utah](#). So far, the petition has 13,842 total signers.

You can post a response for us to pass along to all petition signers by clicking here: [http://petitions.moveon.org/target\\_talkback.html?tt=tt-115677-custom-75514-20261119-egYGWr](http://petitions.moveon.org/target_talkback.html?tt=tt-115677-custom-75514-20261119-egYGWr)

The petition states:

"Stop Rocky Mountain Power from Killing Residential Solar in Utah Over the last year, Rocky Mountain Power's sister company killed 99% of residential solar in Nevada. Now, Rocky Mountain Power is trying to do the same thing in Utah, by asking the Utah Public Service Commission to approve one of the most aggressive, anti-consumer, anti-competitive, and anti-solar proposals ever brought forth by a utility in the United States. The Commission is required to study the costs and benefits of residential solar in Utah. Most states have found that residential solar provides a net benefit to everyone, not just solar customers. Rocky Mountain Power ignores the full benefits and demonstrated cost-savings that they and all Utahns receive from residential solar. Utah deserves an open and transparent cost-benefit study. We call on Governor Herbert, the Utah Legislature, the Utah Public Service Commission, the Utah Division of Public Utilities, and the Utah Office of Consumer Services to reject Rocky Mountain Power's proposal. We ask the Commission to conduct a robust and fair cost-benefit study so that Utah homeowners can continue to invest in solar and energy independence."

## Regarding the request for change to Net Metering Rates for Rooftop Solar Users

1 message

Jan Lawrence &lt;millbrk@xmission.com&gt;

Sun, Nov 20, 2016 at 5:27 AM

To: psc@utah.gov

I have been reading the testimony of the Rocky Mountain Power and PacifiCorp executives from November 9 and I would like to submit the following thoughts for consideration.

With respect to the increasing number of net metering customers, it was stated in the testimony of Gary Hoogenven that there are 16,000 net metering customers expected by the end of 2016, but that Rocky Mountain Power currently services 820,000 customers. While the number is growing based on the data he provided, the total net metering customers is still less than 2% of the total customer base. It would seem that these customers do not likely represent a hardship on the workload of Rocky Mountain Power.

One problem specifically raised in the testimony of Mr. Hoogenven was that the solar power is generated at off-peak hours, but the customers need to draw against their credits during peak time. Yes, the sun only shines for part of the day and therefore the solar users will always need to have some way to draw against either the grid or stored power when the panels are not generating power. He also stated that Rocky Mountain Power has been increasing their usage of solar power as well, no doubt because the cost of solar production has become so cost effective and the raw materials are free. **My point is that Rocky Mountain Power will eventually have to figure out how to store power too** and that cost effective technologies for doing exactly that are rapidly becoming available. Tesla has a product that can store enough power for fairly large commercial operations. Wheeler Equipment is also working on similar systems. This technology is exciting, relatively inexpensive, and CLEAN. There is no reason why Rocky Mountain Power cannot start to make this transition as the demand for this service grows and will eventually provide energy at a rate substantially lower in cost to procure than currently available. Many of us, myself included, have helped them to do exactly that by participating in their voluntary Blue Sky program and other clean energy initiatives, many of which were created because the citizens of Utah demanded cleaner energy production. Even though Mr. Meredith testified that customers are "economically indifferent to whether or not they receive a kilowatt from a private source or some other one", I can verify that customers are not ethically indifferent. No anymore.

The per line fee rate increase from \$9.00 to \$15.00 is nearly a 75% increase! Those rates will be the new starting point for all customers who are net metering and will be there in perpetuity. Every single customer who is currently receiving service from Rocky Mountain Power paid a substantial up front cost to be attached to the grid. I think when we built our home about 6 years ago we paid in the neighborhood of \$10,000 per pole just to bring the power over to the house. Some of the expense has been paid up front.

In reading the testimony of Joelle Steward, she provides a graph of how the net-metering customers load rises about the same time that of regular residential customers begins to lower. Her argument is that the system can manage more consistent and flatter (smoother) trends in demand. It appears that eventually as more users come on line with net-metering and their demands become more consistent, the system will eventually achieve exactly what they are saying is easier for them to manage.

If the demand charge is implemented, you should require Rocky Mountain Power to create an easy to use app that will alert net metering customers when their usage is approaching demand charge thresholds. These apps already exist for some solar systems and should be easy to implement. Cell phone providers already send text messages to phones of users who are about to go over their data allocation. These messages are effective to help the customer make decisions about their usage and also to help the provider to have fewer angry customers who get surprised by a substantial bill they didn't expect to receive.

I do struggle a bit with the small sample size of the net metering group used to calculate the comparative costs. It is possible that these are representative customers, but it is also possible that they might have home based businesses or some other unusual circumstance that the model is not fully capturing. Not every person who has moved over to solar power production had just a regular home. They may have a shop that uses a lot of high tech equipment where they head after working their regular job, or they may have a side business that functions without them during the day. These

anomalies will skew your data. I wonder about the sample, although I can see Rocky Mountain Power made a modest effort to get a decent sampling.

My final point has to do with the assertion that costs of the net metering program result in higher rates for other customers. The costs of serving those customers are fairly easy to calculate, but the benefits to those customers and all residents of Utah are much more difficult to quantify. There is no effort made in this analysis to determine the benefits to all of society because a homeowner is choosing to produce and consume cleaner energy. I find this analysis somewhat limited in light of the poor air quality that inundates our state for a significant part of the year and that it in no way captures the health-related expenses, which can run to tens of millions of dollars. **But here is the question that has me up tonight writing this email at 3:30 am...what are you doing to save this planet?** What are you willing to do to reduce global warming? Taking a single home to solar energy can reduce the carbon load in the neighborhood of 10-12 tons per year. It also might, just might, mean that your grandchildren will get to see a Polar Bear in their lifetime or perhaps enjoy the four seasons in Utah instead of one or two. In my mind we have not a moment to waste. The clock is ticking and time is slipping away. Please do nothing to slow or stop the growth of solar power use, and choose instead to do whatever you can to nurture it. You have so much power to assist this cause in your hands. Use it well.

## Rocky Mountain Power Rate Increase

1 message

---

**Dave Collett** <vance8005@yahoo.com>

Sun, Nov 20, 2016 at 7:45 AM

To: psc@utah.gov

To Whom It May Concern:

I strongly oppose Rocky Mountain Power's proposed rate increase targeted at new solar power owners. Rates should be based on the cost of generation and the amount of power consumed, not used to punish certain customers. As an analogy, if you had a couple of chickens in the backyard would you expect to pay extra for eggs at the supermarket when you had to buy them? Of course not. So why should the government allow Rocky Mountain Power to charge extra for power to customers who generate some of their own? That's equally absurd. If anything, the government should reward citizens who make an effort to use sustainable resources and therefore protect the environment of our beautiful state.

To establish my credibility on this issue, let me say that I am a former power engineer for PG&E in California and I do not have a solar power system and I cannot install one on my condo. I'm simply concerned about fairness and protecting our environment.

Sincerely,  
Dave Collett

**Scott Williams** <licere@gmail.com>

Sun, Nov 20, 2016 at 9:30 AM

To: psc@utah.gov

Cc: nathan williams &lt;ndwilliams22@gmail.com&gt;, rhonda williams &lt;rhondawill@gmail.com&gt;, LeeAnn Kanamu &lt;williams76leeann@gmail.com&gt;

Dear Public Service Commission,

Regarding docket #14-035-114, please know that we are **very much against the regressive proposal to tax solar users.**

This will not only be a negative for the air we all breath, a blow for people with respiratory issues, but will strengthen Rocky Mountain Power's stranglehold on providing us with power from non-renewables.

While I understand that a case could be made for people on the grid subsidizing those who decide to pay \$10-25K for solar panels, it is the people who are putting solar panels on their roof that are doing their part to limit air pollution.

Most solar users would accept a small fee for being connected to the grid, but this proposed fee would make all but the wealthy environmentalists reconsider when thinking about putting panels on their roofs.

Please consider the long-term benefit to everybody's health and the air we breathe. And the booming economic and employment benefits from the solar industry.

Please incentivize socially responsible behavior instead of penalizing those who would like to improve air quality and the environment we all share.

## solar tax credit and Rocky Mountain rates

1 message

Anne and Ted SKEEN &lt;linskeen@msn.com&gt;

Sun, Nov 20, 2016 at 11:06 AM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

To whom it may concern:

I am a concerned citizen of Utah. I am worried about the air quality as a mother and physician. I worry about the health consequences of bad air for our children and ourselves.

The current proposed RMP fees hurt low energy users:

-Adding a fixed monthly fee encourages more energy use and hurts lower energy users. One has to use more energy to overcome the fixed costs associated with using solar power. In addition RMP claims that solar energy users are supplemented at a rate of \$400 per month. What rates are regular energy users supplemented today? I believe using a fixed cost for solar energy users shifts cost from small energy users to large energy uses.

-If one wants to get out of the fees, they would have to install batteries and generate enough power to get off the grid. This also only favors large energy users who can generate large a lot of energy. When technology costs go down people may want to leave RMP

I believe that Rocky Mount power benefits from rooftop solar energy. They benefit by not having to invest as much money into infrastructure for energy generation. It also diversifies their source of energy which helps stability

I installed rooftop solar panels last year. This involved a substantial cost upfront. We did regain some by the tax credits Federal and state later on. We however are not going to see a return on investment for at least 10 years since we're low energy users. I installed the panels because I want to be a good citizen and I believe in protecting the environment for our children.

As you know there is a lot of economic uncertainty these days. I am afraid that taking way too cost incentives for rooftop solar installation will slow this industry. Many people will be discouraged from installing rooftop solar panels and our air quality will suffer.

Sincerely,

Anne Lin

## Rate changes to solar customers

1 message

---

**Amy Mills** <amills3912@yahoo.com>

Sun, Nov 20, 2016 at 12:50 PM

Reply-To: Amy Mills <amills3912@yahoo.com>

To: "psc@utah.gov" <psc@utah.gov>

To Whom It May Concern,

I oppose the increased billing rate to solar customers in Utah. The state should be encouraging use of solar energy, not discouraging it. The energy future of the state should be based on renewable, less-polluting, less carbon-producing technologies. RMP's increase in charges to solar customers would be a step backward. Please also note:

-- Its already a big investment for homeowners to install solar panels, and if RMP tips the balance, fewer people will make this investment.

-- RMP is already unfairly charging solar customers through its annual charge for net-meter use of gric energy above that generated by our solar systems, while they give rebate for our annual solar over-production. They simply use our excess solar energy with no compensation.

Please consider the wide impact of a rate increase and the future of air quality and climate change.

## No to Solar Rate Changes

1 message

---

**Nancy Hanson** <nch.akh@gmail.com>

Sun, Nov 20, 2016 at 4:27 PM

To: psc@utah.gov

RMP's proposed fees for solar net metering customers are unfair, punitive, and regressive. RMP has calculated several inventive ways to charge solar customers: increased base rate (is this in addition to \$9 we currently pay monthly?), a monthly demand charge, and a decrease in the amount they will compensate home owners for solar energy generation while then selling it for more than twice as much to non-solar home owners in nearby locations. RMP may be able to purchase solar energy from large solar farms for less, as they claim, but rooftop solar does not require significant transmission costs.

Solar energy provides considerable benefits to Utah, and these need to also be factored into the calculations. Homeowners purchasing a solar panel system have invested considerably to contribute to clean and sustainable energy within our community. It is shortsighted to allow RMP to focus on some but not all aspects of solar energy .

The percentage of customers that are utilizing net metering is small, and they are being unfairly targeted as a single class of customers. It could also be argued that more efficient, conservation minded customers should also be assessed additional fees, given they are not paying their fair share of grid costs. If changes occur for solar customers, the same charges and fee assessments should apply to all customers. In contrast, hook up fees for net metering seem reasonable.

Lastly, RMP is not a company that engenders trust from consumers. Lobbying legislators (Senate bill 1 15) to get what they want, rather than working through the PSC, is a demonstration of their power and unwillingness to consider customer needs for an essential utility or work within an existing regulatory entity . How can I trust that RMP's convoluted calculations are fairly assessing solar's impact and not simply using the rhetoric to line their pockets and shut out competition that offers many, many benefits to the community and our world?

Thank you,

Nancy Hanson

**comment on proposed solar fee changes**

1 message

---

**dferguson801@yahoo.com** <dferguson801@yahoo.com>

Sun, Nov 20, 2016 at 5:40 PM

Reply-To: dferguson801@yahoo.com

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Sir/Ma'am,

As a home owner who installed rooftop solar three years ago I certainly have a bias and admit to it. I would say though that what led me to look at solar power was the poor air quality we had the previous winter and my daughter's trouble breathing due to her asthma. For me, that was the biggest factor in my decision to try to do my part to clear the air a little. I do not see that positive benefit being considered in any of RMP's proposals. I would hope you consider that as part of the renewable energy policy in the state.

That said, I understand the shift to renewables could be a burden on RMP's gird at some point many, many years in the future at the pace we moving. So I agree with adjustments and fees for people that have made the choice to move to rooftop solar. However, they should be reasonable and balanced. For example, my panels are only generating 2.1kW of power which is about half of my usage, so I still support the "traditional" grid and would be over-penalized under RMP's proposed plan. Again, I am fine with a minor increase in fees to keep the grid supported for all Utah consumers.

My concern is the three tiered approach by RMP seems to be an incredibly aggressive "power grab." It looks to me like they are putting three major fees out there hoping one will get through committee, because even one of them is higher than prior proposals. The flat fee is an example of that. If I remember correctly they asked for a \$5 increase a while back and they are asking for \$9 now, PLUS a peak charge, PLUS a higher rate for grid power.

Personally I believe a flat fee increase probably is needed and a reasonable one supported with data would be fine. The other two fees would place an additional and unneeded burden on solar users and could kill the industry. For me personally, since I only generate part of my needs through solar, I would actually lose money every month under their new proposals because I currently use grid power for half our needs. I would have to shut down my panels to avoid losing money every month. That is not what we need.

Kind regards,

David Ferguson

**solar letter.docx**

16K

To whom it may concern:

Use of solar panels provides a clean way to convert energy from the sun into electricity. Solar electricity generation is one of the few low-carbon energy technologies with the potential to grow to large scale. Several benefits are immediately obvious. The sun provides unlimited energy that has been used for millions of years to produce green plants. Sunlight is free. With the advent of modern physics, chemistry, and engineering during the past century, clever individuals have discovered how to convert sunlight into electricity using readily available chemical elements. In the past few years, this discovery has been commercialized and is now the basis for a rapidly growing global enterprise that has the promise over the next few decades of providing electricity to a wide variety of users ranging from homeowners to large businesses at competitive rates. Today, it is estimated by the Solar Energy Industries Association that the U.S. solar industry employs 174,000 Americans and pumps nearly \$18 billion per year into our economy.

Advantages of solar energy for electricity production are many. Solar panels can be used for small installations such as homes or for large buildings. A solar inverter is used to convert direct current output into alternating current for use by the energy off-taker. Most installations are tied to regulated electric utility industries, but it is possible to make the operation independent by using rechargeable batteries. The system is simple with no need for extensive transmission lines from commercial coal, natural gas, or nuclear electric power generating plants to the user. Secondary effects encountered with the use of coal, natural gas, or radionuclides to power these plants, such as environmental pollution and negative human health issues are eliminated. This is a tremendous benefit, especially in developing countries, since waste generated in mining, processing, and using these resources is large and expensive to treat, if treated at all.

Use of green technologies, such as solar panels, is increasing on a global scale. Western Europe, China, and India are prime movers in this effort. The population of India is over one billion. Of these, about 300 million do not have access to electricity. This number is equal to the population of the United States. India has embarked on a program of installing solar panels on rooftops and setting up massive solar parks. This effort is expected to catapult India to the forefront of the global effort to bring electricity to all. An immediate benefit is the decreased need to build electric power generating plants to provide this electricity.

Some experts predict that by 2050 a major fraction of the world's power should come from solar sources. However, getting to this point will require real and dedicated cooperation among stakeholders including users; providers; local, State, and National legislators and policy makers; and utilities. Many important and controversial issues need to be considered and workable solutions found.

The long-term potential of solar power to meet a significant portion of global electricity demand is assured. It is imperative that stakeholders work together to identify and solve problems. Individuals in the U.S. should be leading this field, not putting impediments in its path.

Dear Sir / Madam,

I would like to submit these comments for your consideration and ~~the~~ <sup>official</sup> record during your review of Rocky Mountain Power's proposed changes to Net Metering agreements.

The Commission has previously put forth a deliberate multi-step process for evaluating the costs and benefits Metering. One RMP cover letter claims that their filing does not impact rates but they also request immediate approval of new schedules which would in fact change fees paid by certain customers. ~~There~~ <sup>There</sup> is no urgency for adoption of these changes. Sufficient time is needed to respond to RMP financial analysis / justification for their request. Please decline the 'fast-track' request. RMP should follow standard rate change procedures.

It is fair that all customers that are connected to the grid should pay RMP for their connection to the grid and option to draw power from the grid (whether they do so or not). A connection fee ensures that all customers that connect to the grid share in the cost for maintenance of the distribution infrastructure. ~~It is~~ <sup>It is</sup> clear that RMP wishes to cover these costs but they have gone way beyond this approach in their request.

Maintenance of the distribution system is a relatively fixed cost so the price to consumers should not be variable calculated on a "peak usage" formula. In fact a better way to approach this situation would be to have RMP distinguish between their costs for power generation and power distribution. As long as these costs are combined, proper calculation of costs for only their distribution system cannot be accurately calculated.

In case the Commission chooses to include consideration of "peak usage" in Net Metering agreements then RMP analysis should be revised such that all customers share the burden of demand charges for peak power usage – not just residential solar system operators.

Thank you very much for your consideration of these comments. I hope that the Commission will take its time to fully evaluate these applications and seek further public input before making final decisions.

Sincerely

H. Scott Rosenbush

**Kim Bené** <Kbene@utahweb.com>

Sun, Nov 20, 2016 at 8:15 PM

To: psc@utah.gov

To: Public Service Commission

From: Kim T. Bené

Dear Sirs,

I am not a current owner/user of a solar generating system.

But I am a breather of air and I do believe there are many benefits to some people enjoying the benefits and economy of a solar system so I am happy that the economic climate in Utah encourages such and I believe that I, a non-owner, also receive benefits.

I would like to have my own system some day but I don't believe the proposed rate hike by Rocky Mountain Power will be beneficial to that goal.

The rates and policy for solar is fine just the way it is now and as a resident and taxpayer I urge you to continue with the current rates and policies on solar roof panel electricity generation. I believe Rocky Mountain Power is taking advantage of its monopoly status in proposing to prevent the expansion of solar power. They make enough money now. Lets step boldly into the future.

**Chris Lant** <chris.lant@usu.edu>

Sun, Nov 20, 2016 at 9:23 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Public Service Commission:

I am writing to you in opposition of Rocky Mountains Power's proposal to single out rooftop solar customers for an electricity rate increase. Thousands of Utahans have recently made investments in solar power with the understanding that the power they produce would be treated fairly in comparison to other sources. The propose rate increase would be a bait-and-switch undermining the value of these investments which were made in good faith.

It is clear that distributed solar power has become a competitor that Rocky Mountain Power seeks to undermine. Principles of fair economic competition, however, demand that the State not play favorites by facilitating Rocky Mountain Power's desire to maintain a near monopoly on electricity. A similar proposal in Nevada did in fact put the brakes on solar power development there, an outcome we wish to avoid in order to maintain the spike in job creation solar has generated.

Moreover, we all know how solar power contributes to solving problems of Utah's air quality violating Clean Air Act standards, climate change, and conservation of depleting fossil fuel resources.

Approving Rocky Mountain Power's electricity rate proposal would take Utah in exactly the wrong direction. I therefore request that it be denied.

Respectfully,

Christopher Lant

Sun, Nov 20, 2016 at 9:48 PM

To: psc@utah.gov

Dear PSC,

I am emailing to express my concern over the net meter rate schedule proposed by Rocky Mountain Power

As outlined in your report, there are real issues going forward investing in a grid that works under the distributed model of renewable energy, and I encourage Rocky Mountain Power to continue to plan for that future. Individual investing in rooftop solar are allies in this cause, and as residential storage technology improves, will help Rocky Mountain Power create a robust and sustainable power grid.

This plan stands to cripple the roof top solar industry in Utah. The pricing structure ensures that solar installation would rarely recoup the large initial investment. Furthermore, the peak power demand charge, modeled after commercial solar installations, penalizes residential grid-tied customers. The proposal would also penalize owners of both solar panels and electric cars, discouraging such an investment just when it is crucial that we get tailpipes out of the valley to improve air quality. There are quite a few other fee models that could be proposed that don't use commercial solar as a model.

I agree that solar users benefit from the current net meter fee structure, but everyone else benefits from more renewables on the grid, meaning better air quality for everyone. The last thing we should do is discourage people from investing their own money in roof top solar

As it stands, I cannot support this plan and I would encourage you to extend the public comment period so that all stakeholders can adequately review your proposal.

To: psc@utah.gov

They say it's about being fair. This is not about being fair at ALL!! It's entirely about making and growing profits and keeping people dependent and poor We struggle to make a living for ourselves and/or our families and pay our bills while everything increases (Gas, health insurance, taxes, etc.) except our paychecks that do not!!

The owner of Rockey Mountan Power and Pacific Corp is Bershire Hathaway, who's CEO Gregory Edward Abel who's net worth is 41.5 Billion. Who last year got \$41 Million in incentive reward for increasing profits of the company 48% and the owner of Bershire is Warren Buffet."

You're kidding yourself if you don't think this is about Abel making sure he has another "profitable" quarter for himself, and Berkshire banking on that multi billion dollar figure... you tell me does that look modest to you?

What kind of help or who's going to help us little guys so we can survive in this ever changing business profit world, where's our right to profit?

To: "psc@utah.gov" <psc@utah.gov>

Dear Members of the PSC,

I urge you to require RMP's request to have their net-metering customers pay additional fees go through the normal rate adjustment process. I believe they are trying to preemptively eliminate a healthy competitor industry using their status as a publicly sanctioned monopoly . Ample time should be allowed for public review and input.

## Rocky Mountain Power Net Energy Metering proposal

1 message

---

**Warren Family** <djwarren4@gmail.com>

Sun, Nov 20, 2016 at 10:03 PM

To: psc@utah.gov

To whom it may concern,

I am against Rocky Mountain Power's latest Net Energy Metering proposal.

I am not against RMP making fair profits, but as a company that has been granted a monopoly, it must be regulated. I believe that you would not be doing your duty to accept at face value what appears to be a self-serving study. It may very well be in the future that Utah is generating so much solar power during the day that it cannot be consumed locally and RMP is forced to sell it to others and a change may be required, but I doubt we are getting close to that point yet.

As I'm sure you are aware, as a NEM customer, I must pay RMP a \$6/month fixed charge just to be connected to the power grid, as well as a \$2/month minimum charge fee. In addition, all surplus energy credits are "donated" to RMP in March of this year. I estimate I will donate over \$100 in electricity this year. That's about \$200 I am providing to RMP. I reject any labeling of NEM customers as not paying their fair share.

Please stay on the current course until your own independent study can be completed. Then an informed, unbiased decision can be reached.

Thank you for your service.

Best regards,

David Warren

**Eric P. Jameson** <epjameson@gmail.com>

Mon, Nov 21, 2016 at 12:51 AM

To: psc@utah.gov

RE: Rooftop Solar Panel rate changes

I am 68 and seasonally suffer from some of the worse air pollution in the country. It is clear the proposed rate changes are solely directed at destroying a clean energy source for the very short term profits of Rocky Mtn. Power. Please do not let this happen!

Instead please change the rates to ENCOURAGE a switch from dirty coal to cleaner fuels, including natural gas as a transition fuel. I do not mind paying more for air that does not kill me on a slow basis. I am tired of buying rescue inhalers on a seasonal basis.

Please remember the PUBLIC in Public Service Commission!

Sincerely yours,

Mr. Eric Jameson

---

**Ben Lariviere** <lariviereben@gmail.com>

Mon, Nov 21, 2016 at 5:59 AM

To: psc@utah.gov

I am writing because I am concerned about the proposed rocky mountain power rate increases for solar users in Utah. The increased rates would eliminate many jobs in the solar energy field, It would make it harder for Utahans to save money by switching to solar and it would make it harder to improve air quality by using a nonpolluting energy source. Pleas reject the rate increases and instead promote the growth of solar in utah.

Thank you for your time.

## Don't penalize people for investing in Solar!

1 message

---

**Nole Walkingshaw** <NoleWalkingshaw@msn.com>

Mon, Nov 21, 2016 at 8:26 AM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

Utah Public Service Commission,

One of the greatest negatives facing Utah is our air quality. It impacts our health, our economic development opportunities, tourism and peoples impressions of our community. Investing more into solar helps minimize the impacts that we are feeling especially as our population continues to grow. The coal lobby has immense power obviously the state wanted to build them a \$53 million dollar port in California. This is unacceptable behavior and irresponsible governance should this bill go through. My family just made a \$20,000.00 investment with the hope that not only would we be able to make a difference but also recover that investment over about 10 years. This bill would eliminate that recovery and the good faith investment we made based upon the pricing and policies that are in place.

When we sat down as a family to talk about this investment our kids said yes we need to make this investment. To our Children Solar and other renewable are our future, we invested because they asked us to. My son asked if we could go to Glacier National Park next summer. Park Rangers predict that the Glaciers will be gone by 2020. My son suffers from asthma we don't want to move away from the Wasatch front but it is becoming a health issue for may family

Please don't screw us and other families who want to make a difference. Support continued investments by families and recognize the value it brings to our state as we work towards energy independence not imports and exploitation of of our economy and our environment.

Sincerely,

Nole Walkingshaw and Family

**David McCray** <mccray.david@gmail.com>

Mon, Nov 21, 2016 at 10:35 AM

To: psc@utah.gov

I would urge you to vote against Rocky Mountain Power's efforts to increase the monthly rates paid by solar users. When my wife and I estimated the cost it took to provide just our home for one year ( 6 tons!) it became a no-brainer that if we could do something to reduce the ill-effects of burning that coal that we should spend the money. We decided to take a considerable chunk out of our retirement funds to do so. Given our ages, it's about 50-50 that we will live long enough for us to break even on our investment in solar. We didn't have solar power installed just to reduce our power bill but rather to reduce the need to burn polluting coal and reduce our carbon footprint. It was a very sizable investment in the future of our state. Rocky Mountain Power is and will continue to do quite well financially . I think it is short-sighted to take away the incentive for citizens to do our part in reducing pollution. In addition, the solar industry provides significant economic benefit to the state with jobs, tax revenue, maintaining our image as a forward-looking technology state, etc.

Please maintain the incentives for installing solar power. I believe its benefits far outweigh the minimal reduction in Rocky Mountain Power's profits. It will also reduce the amount of coal they have to buy, transport, and burn.

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time

Thank you.

Constituent Services.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky Mountain Power solar rate proposal Dear Governor Herbert, I am writing to ask for your support in turning down the rate proposal Rocky Mountain Power (RMP) wants to impose on new rooftop solar installations. The study conducted to support this rate is not accurate or acceptable. We need an independent unbiased party to perform a transparent evaluation of both the costs and benefits of rooftop solar. Any change in rates needs to be derived from that and go through the regular process. The deadlines both for comment and decision by the PSC are too short. Please ask the PSC to commission an independent study and abide by the results. I have rooftop solar that was

installed by a local company that will likely go broke if this passes. I drive an electric vehicle so that I'm not contributing to our air quality problem. This rate proposal would punish the growing number of Utah citizens who want to do what I'm doing. I believe that citizens of Utah want clean energy choices. Case in point: RMP's solar farm is sold out. If this rate proposal passes, rooftop solar will not be economical for anyone and people will have no choices. RMP will have protected their bottom line, but at a tremendous cost to progress in our state. You have set energy efficiency goals. Allow rooftop solar to help us meet them.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Questar Infrastructure Rate Bill Dear Governor Gary Herbert: It has come to my attention that Rocky Mountain Power is attempting to monopolize on the energy market in the state of Utah through attacking future solar-interested residents and fining them for choosing an alternative energy. This is deplorable, and I demand that you stop Rocky Mountain Power from passing this bill. Utah residents have the right to choose the energy methods their homes run on without being punished through choosing an environmentally and financially fiscal option for their families. I would also like to remind The Public Service Commission of Utah that many solar companies are based in Utah including Vivint Solar, Auric Solar, Solar City, Solaroo Solar Energy, Powerco Solar, Intermountain Wind and Solar, as well as many others. Passing this bill would presumably harm and deplete many jobs throughout the state. Passing this bill goes against families' rights, business rights, and environmental rights while creating a monopoly for a fossil fuel company. I implore you to do the right thing and deny this bill from passing. Thank you for your consideration. Sincerely, Karlie Hansen

Thank you.

**Subject:** Rocky Mountain Power

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Dear Rylin,

Thank you for your email to the Office of the Governor regarding Rocky Mountain Power and solar energy regulations. I have been asked to respond on behalf of Governor Herbert.

I followed up on your concern with the Public Service Commission (PSC). It is the Commission's policy not to comment on open cases/dockets they are adjudicating. However, your stance and explanation have been recorded and forwarded to the PSC. Your stance will be taken into consideration during the upcoming months of deliberation. To view the history/status of this case and the corresponding public comments, please visit the following url:  
<http://www.psc.utah.gov/utilities/electric/elecindx/2014/14035114indx.html>

Our office encourages you to continue expressing your opinion on this critically important matter. You have already sought out the correct avenues to make your voice heard and we thank you for your civic proactivity.

Kind regards,

Harry Jones

**Request** (Open): Hi, Governor Gary Herbert, this is heron Watson. I live in 946 West 2860 South Syracuse, Utah, and I currently am an owner of blue skies solar, and I just wanted to let you know that I'm my family 5 children my wife will be personally impacted by letting the commission approve this Rocky mountain power initiative that they're trying to very quickly and covert Lee pass. It will it will destroy the solar industry just like a has a Nevada and as in Arizona. I've been in the part of the solar industry a long enough to see that these affects our true and real. They're they're not maybe they're they're definite, and I hope is our governor. You will show some compassion towards all of the people working in the solar industry all the veterans that are being trains the reason that president Obama came and visited hill Air force base was to commands on our our program that we have where we were better. We're training veterans to transition into the solar industry that that would be hard to do when the solar industry is dead because we allowed to Rocky mount power to Hathaway. So if you care about small business, and if you care about veterans that I hope you'll care about stopping at all costs. What Rocky mountain is trying to do if you have any questions or comments. I can be reached at 800 one 573 5240 and I hope you understand that your your decision on this will impact many many families that other livelihood game. Bye this industry so please fight for us, and I will continue to fight for you. Thank you. Play message

Thank you.

**Constituent:** Storey, Branden**Constituent Email:** [branden@synergyrebar.com](mailto:branden@synergyrebar.com)**Mobile #:****Home #:****Subject:** Rocky Mountain Power

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Governor's Office, Constituent Services.

## Net meter rate schedule proposed by Rocky Mountain Power

1 message

---

**Kathryn Lindquist** <kathrynlindquist@comcast.net>

Mon, Nov 21, 2016 at 11:14 AM

To: psc@utah.gov

If you care about reducing air pollution in Utah, especially the Salt Lake Valley, as well as promoting clean energy, please do not allow Rocky Mountain Power to increase fees for rooftop solar energy.

As outlined in your report, there are real issues going forward investing in a grid that works under the distributed model of renewable energy, and I encourage Rocky Mountain Power to continue to plan for that future. Individual investing in rooftop solar are allies in this cause, and as residential storage technology improves, will help Rocky Mountain Power create a robust and sustainable power grid.

This plan stands to cripple the roof top solar industry in Utah. The pricing structure ensures that solar installation would rarely recoup the large initial investment. Furthermore, the peak power demand charge, modeled after commercial solar installations, penalizes residential grid-tied customers. The proposal would also penalize owners of both solar panels and electric cars, discouraging such an investment just when it is crucial that we get tailpipes out of the valley to improve air quality. There are quite a few other fee models that could be proposed that don't use commercial solar as a model.

I agree that solar users benefit from the current net meter fee structure, but everyone else benefits from more renewables on the grid, meaning better air quality for everyone. The last thing we should do is discourage people from investing their own money in roof top solar.

As it stands, I cannot support this plan and I would encourage you to extend the public comment period so that all stakeholders can adequately review your proposal.

Thank you,  
Kathryn Lindquist

**ROCKY MOUNTAIN POWER.**

1 message

---

**bevbortolussi** <bevbortolussi@gmail.com>

Mon, Nov 21, 2016 at 11:30 AM

To: psc@utah.gov

Please register my opinion. I don't want Rocky Mountain power to increase the monthly cost to solar households. From an environmental point, it will lessen solar installations, which will increase our valley pollution. If we don't encourage green energy through financial incentives, we all loose. Plus, it is not fair treatment of those who expected to pay less each month, and were therefore willing to incur the cost of solar installs. I do not have solar power, but am willing to pay to encourage it

sincerely, Beverly Boyce , Browning Ave , SLC

**Docket 14-035-114 Net Meter Compliance**

1 message

**Michael Behring** <mbehring2@comcast.net>

Mon, Nov 21, 2016 at 11:44 AM

To: psc@utah.gov

Cc: Jennifer Bodine &lt;jenniferbodine@weber.edu&gt;

Dear Sir/Madam

Reference: Docket 14-035-114 Net Meter Compliance

I am emailing to express my concern over the net meter rate schedule proposed by Rocky Mountain Power.

As outlined in your report, there are real issues going forward investing in a grid that works under the distributed model of renewable energy and I encourage Rocky Mountain Power to continue to plan for that future. Individuals investing in rooftop solar are allies in this cause, and as residential storage technology improves, will help Rocky Mountain Power create a robust and sustainable power grid.

This plan stands to cripple the roof top solar industry in Utah. The pricing structure ensures that solar installations would rarely recoup the large initial investment. Furthermore, the peak power demand charge, modeled after commercial solar installations, penalizes residential grid-tied customers. The proposal would also penalize owners of both solar panels and electric cars, discouraging such an investment just when it is crucial that we get tailpipes out of the valley to improve air quality. There are quite a few other fee models that could be proposed that don't use commercial solar as a model.

I agree that solar users benefit from the current net meter fee structure, but everyone else benefits from more renewables on the grid, meaning better air quality for everyone. The last thing we should do is discourage people from investing their own money in roof top solar.

The Nevada public utility commission approved a similar change last year for Nevada customers at the request of the power company. At the time, Nevada, which is ideally suited to solar power, was undergoing a surge of solar installations. Before the change, customers with rooftop solar received the same rate for power they fed into the grid as they paid for power they took from the grid, so called "net metering." Part of the change reduced the compensation to "wholesale" rates, approximately an 87% reduction in the amount paid to the solar customer. As a result, the solar industry in Nevada ground to a halt. Solar City, the largest installer in the state, pulled out. This eliminated approximately 500 good paying jobs.

As it stands, I cannot support this plan and I would encourage you to extend the public comment period so that all stakeholders can adequately review your proposal. I also urge that more effort be put into the development of key technologies that will better enable full integration of distributed power generation into the grid.

Sincerely,  
Michael A. Behring

## Rocky Mountain's net metering proposal

1 message

---

**Danny O'Malley** <phoenixtreelc@gmail.com>

Mon, Nov 21, 2016 at 12:34 PM

To: psc@utah.gov

Dear Commissioners,

I'm writing regarding the proposed changes from Rocky Mountain Power. This is an unacceptable proposition for many reasons, and I hope you will reject their heavy-handed attempt to destroy the local future of a global energy movement.

This is un-American in its approach, because they are limiting the freedom of choice for hundreds of thousands of people. This is bad for business, because the solar industry employs many thousands of Utahns that are working to improve our air quality and turn our state into an even better place to live. This is bad for energy independence for everyone, because solar is generated where it is used, rather than piped across many hundreds of miles through outdated systems from inefficient and unhealthy production centers.

I hope this is one of many comments you have received, and I hope it doesn't just turn into white noise. I ask that you reject Rocky Mountain Power's proposal and instead order a complete rate case. Please continue to watch out for Utah's best interests whenever any organization attempts unfair monopolistic bullying like this.

I appreciate your commitment to the public good. Thank you for your time and consideration.

Daniel Moore O'Malley

**Linda Oswald** <linda@south-fork.net>

Mon, Nov 21, 2016 at 12:42 PM

Reply-To: linda@south-fork.net

To: psc@utah.gov

Dear Public Service Commissioners,

I am writing in strong opposition to Rocky Mountain Power's proposal to drastically increase monthly energy costs for customers who have installed solar panels. I believe RMP's proposal will effectively kill Utah's solar industry. I am willing to pay appropriate monthly fees as currently structured, but the proposed monthly rate increase will be a hardship for me as well as for all solar customers. The Public Service Commission should oppose Rocky Mountain Power's proposal.

Thank you for your consideration.

Mon, Nov 21, 2016 at 12:43 PM

To: psc@utah.gov

Dear PSC Representative,

I am writing today in regards to the proposal submitted by Rocky Mountain Power to create a new method for calculating, and raising, net-metering on household with solar installations.

I do not believe households wishing to utilize solar should be financially penalized for doing so, whether their reasons for doing so are based on cost effectiveness, sustainable energy practices, or both. Additionally, I do not feel it wise to create deterrents for those seeking more sustainable practices.

I ask that you do not accept Rocky Mountain Power's current proposal.

Thank you,  
William Santee

I am writing in strong opposition to Rocky Mountain Power's proposal to drastically increase monthly energy costs for customers who have installed solar panels. I believe RMP's proposal will effectively kill Utah's solar industry. I am willing to pay appropriate monthly fees as currently structured, but the proposed monthly rate increase will be a hardship for me as well as for all solar customers. The Public Service Commission should oppose Rocky Mountain Power's proposal.

Thank you for your consideration.

To whom it may concern:

It has come to my attention that Rocky Mountain Power is attempting to monopolize on the energy market in the state of Utah through attacking future solar-interested residents and fining them for choosing an alternative energy. This is deplorable, and I demand that you stop Rocky Mountain Power from passing this bill. Utah residents have the right to choose the energy methods their homes run on without being punished through choosing an environmentally and financially fiscal option for their families.

I would also like to remind The Public Service Commission of Utah that many solar companies are based in Utah including Vivint Solar, Auric Solar, Solar City, Solaroo Solar Energy, Powerco Solar, Intermountain Wind and Solar, as well as many others. Passing this bill would presumably harm and deplete many jobs throughout the state.

Passing this bill goes against families' rights, business rights, and environmental rights while creating a monopoly for a fossil fuel company. I implore you to do the right thing and deny this bill from passing. Thank you for your consideration.

Sincerely,

Karlie Hansen

**Doc 14-035-114 Proposed Solar Penalty**

1 message

---

**GALEN** <galenstarr@comcast.net>

Mon, Nov 21, 2016 at 12:56 PM

To: psc@utah.gov

**Gentlemen**

I urge and implore you to reject the proposed increase to solar customers put forth by Rocky Mountain Power. We as a society desperately need a clean energy source for everyone. We need MORE incentives to add rooftop solar. Rooftop solar has many advantages that Rocky Mountain Power is not taking into consideration one of which is the building of new power plants to service the increasing number of costumers. People with rooftop solar pay for the solar panels themselves putting power to and already existing grid and producing the most power when demand is at its highest like a hot summer day Most utilities will pay customer for excess power streamed to the grid, RMP pays nothing for that power selling it for a profit. That in itself should offset the meters that are installed for solar which are paid for at \$9 a month for life. Change is painful but please let us remove the old dirty ways of producing power and make clean power and efficiency the norm for us and future generations.

Thank you

Galen Schuck

**RMP 14-035-114 net metering proposed changes 135A**1 message

---

**Miranda Menzies** <menzies.miranda@gmail.com>

Mon, Nov 21, 2016 at 1:44 PM

To: psc@utah.gov

Dear Commissioners,

With respect to the filings of RMP , the cover letter of Jeffrey K Larsen asserts that the proposed Schedule 135A does not "make changes which result in lesser service or more restrictive conditions at the same rate or charge.

However, the proposed additional wording includes the statement "customers will be subject to all changes . . . including changes to credits, charges or rate structures . . . which may include, without limitation, a transfer from this tariff to all new applicable service schedules approved by the commission"

I am not a lawyer. In plain English, when you impose upon a customer new conditions, which include changes not previously applied to another customer in similar circumstances, it sounds to me like a " more restrictive condition at the same rate or charge".

Please would the commission NOT approve the Schedule 135A, until such time as it becomes clear where this net metering issue is going, and Customers can know where this issue is headed, before they install equipment.

Sincerely,  
Miranda Menzies

## RMP and net metering

1 message

---

**Mick Jury nec** <m.jury nec@utah.edu>

Mon, Nov 21, 2016 at 2:14 PM

To: crevelt@utah.gov

Cc: psc@utah.gov

Dear Utah Public Service Commission.

I am writing to express my concern over RMP's proposed changes to net metering. I think it is a greedy and selfish act on the part of RMP. They frequently advertise that they are a green energy company and support alternative energy production, but only when it is profitable to them. An example of this is their Blue Sky Program. This is simply a money making scheme to make them look like they are environmentally friendly. Would they have this program if there weren't incentives or profit for them? No. RMP does not have the best interest of Utah and its citizens in mind. For example, look at the last minute deal struck by RMP and the Utah legislature last session. This was an underhanded deal that never should have passed.

As you know, our winter air quality is awful. We should be doing every little thing we can to improve it. Increasing fees for net metering is not a good way to promote clean air in Utah. The argument that RMP makes that net metered customers don't pay for their fair share of maintenance is simply false. By using their argument, I could say that any rural customer (who pays the same rate as I do) also doesn't pay for their fair share - longer lines, more substations, etc to get electricity out to them. I don't see RMP going after these customers nor do I see rural consumers volunteering to pay more maintenance fees.

I do not feel bad for RMP at all. It's clear the clean energy is growing in Utah and can potentially have a significant impact on carbon emissions. If RMP can't change to accommodate the future, then maybe they should give up their monopoly, leave Utah, and make room for an energy company that can think past coal.

I have a PV at my house. Why doesn't the legislature and Public Service Commission make RMP pay me for excess power I put into the system?? I have had my PV system for 3 years and each year I have put more into the system than I've used. I realistically don't expect to get paid for this excess, but I also have the expectation that I not be penalized for having a rooftop PV system. And yes, I think asking home PV customers to pay increased fees is a penalty. If RMP continues to go after net metered customers, they will lose my business. I am currently getting quotes for a battery system with a natural gas generator. I know this isn't feasible for all net metered customers right now, but the technology will get better and cheaper and RMP will lose more people as it does.

I urge you NOT to support any proposal by RMP that negatively affects customers with home PV system and net metering in Utah.

Please put OUR air before RMP's profits.

## Net Metering 14-035-1 14

1 message

---

**Miranda Menzies** <menzies.miranda@gmail.com>

Mon, Nov 21, 2016 at 2:25 PM

To: psc@utah.gov

Dear Commissioners,

Please do not approve the filing by Rocky Mountain Power for changes to the Net Metering tariffs and fee schedules. The proposed schedules for new renewables connections will decimate the Utah solar and renewables industry. Please schedule Public Hearings so that this issue can be fully discussed and the intended and unintended consequences identified and addressed.

As the owner of a current roof top solar house we have access to ACTUAL DATA that shows the benefits of solar, and allows us to understand the estimated bills that we would experience if we were subject to the demand charges under the proposed Schedule 5. RMP has asserted that the average net metering customers demand peaks at 1.6 KW. We believe this is incorrect based on the data we are collecting. We believe the actual maximum demand to be 4 to 7 KW for a house with electric appliances. This would rise to 11 to 14 KW for houses with an electric vehicle. Our zero emission geothermal HVAC system heats our house with heat energy stored in the ground, but recovered through an electric heat pump system. We have solar panels to drive this system.

Our house, which is approximately "net zero" on an annual basis for all heating and other energy uses, would go from a monthly electric bill of \$8.50 to a bill of \$30 to \$65 per month. This bill would increase to \$115 to \$145 / month if we purchased an electric car.

In other words this filing has the potential to shut down not just the roof top solar industry, but also the electric car transition for those houses with solar – the group most likely to buy electric vehicles. We NEED these vehicles to be purchased broadly to address the air quality concerns in the Salt Lake Valley.

Please reject this filing and schedule public hearings,

(This comment was sent November 16, 2016, but apparently not received by you, since it has not appeared on the docket.)

Sincerely,

Miranda Menzies

Mon, Nov 21, 2016 at 2:54 PM

To: "psc@utah.gov" <psc@utah.gov>

Good Afternoon,

Please do not allow Rocky Mountain Power to fine/charge people for going solar. Our world needs to be going solar. If RMP is fearing the loss of profits, then they too need to jump on the alternative power band wagon. We the people should not be punished by big businesses for trying to protect our planet for our kids simply because it hurts their wallets. I'm a bit disappointed that we even need to do this. That this idea of fining people has even been let out into the world. Again, I ask, with all sincerity, that you please do not allow this idea to carry on any further.

Thank You,

Jeremy W. Miller

## Please reject RMP's proposed fees for net metering customers

1 message

---

**Sam Lentz** <h.j.lentz@gmail.com>

Mon, Nov 21, 2016 at 3:40 PM

To: psc@utah.gov

Dear Public Service Commissioners,

Please reject Rocky Mountain Power's (RMP) request to assess new fees to net metering customers. The argument presented in their request is invalid, and I believe they intend to prevent competition, rather than ensure fairness.

In section B (page 13) of [UT 14-035-114 RMP Compliance Filing \(11-9-16\)](#), RMP asserts the following:

This solar generation often does not coincide with the Company's peak load, thus only minimally reducing that load. Company witness Mr. Marx testifies that a net metering customer's peak production occurs during the spring months while their peak load, and that of other customers, occurs during the summer months. These factors necessitate increasing the size of the distribution facilities as a result of net metering.

The conclusion drawn in that last statement is false. After admitting that solar generation reduces the load on their grid, RMP cannot then claim this causes them to increase the size of their distribution facilities. Even if the peak generation and peak demand are not perfectly synchronized, a very strong correlation exists between when the sun is shining and when air conditioners are running the summer time. Therefore, RMP experiences an actual reduction in peak demand due to net metering customers.

Additionally, excess power from net metering customers can typically be transported to a nearby customer, unlike power from RMP's power plants that travels hundreds of miles. So rather than building costly grid infrastructure that loses efficiency over long distances, net metering customers can utilize existing infrastructure within their own neighborhood. This extends the life of the system's capacity, resulting in a reduction in the need for additional distribution facilities.

Net metering customers should not be punished for reducing the power load at peak demand. The three-part rate structure RMP proposed is intended to make investing in photovoltaic solar so costly that residents would pay significantly more for solar than to utilize RMP's coal-generated power. Because RMP's corporate hierarchy also includes coal mining and distribution, this request appears to be aimed at protecting the supply chain of their existing monopoly, rather than doing what's right for customers and communities.

Recognizing a long-term need for cleaner, sustainable energy, Federal and State legislators have for several years offered tax incentives to make solar more affordable. RMP's proposed rate structure would effectively funnel all these subsidies (and more) back into their own business, which is heavily dependent on pollutive coal technology.

I understand RMP is a business, and their shareholders expect to profit from their operations, but their request is dangerously anti-competitive, anti-consumer, and further threatens the already poor air quality in Utah. Please reject their

11/22/2016

State of Utah Mail - Please reject RMP's proposed fees for net metering customers request, and protect the rights of Utah residents to invest in sustainable energy.

## Proposed rate increases for residential rooftop solar

1 message

---

**Andrew Briefer** <abriefer@comcast.net>

Mon, Nov 21, 2016 at 4:18 PM

To: psc@utah.gov

I understand that Rocky Mountain Power(RMP) is requesting that they be allowed to increase fees to residents with rooftop solar power generation based on their claim that residential solar generators are not paying their fair share of costs. I urge to commission to reject this request for the following reasons.

1. If RMP is concerned about equity, then there should be a flat connection fee for all customers for infrastructure that is independent of the amount of power bought or sold (unless the quantity bought or sold at any particular site requires specific infrastructure to operate). They do not appear to have done this. Nor do they appear concerned about the equity of people who reduce their bills via conservation or the costs of people whose rural connections cost far more than urban users.
2. Their analyses of costs appear to be biased for the purpose of discouraging solar when they do not consider the cost savings of reducing their most expensive peak power demands.
3. As **Public** Service Commission, it is your duty to consider the public good, something RMP appears unconcerned with. We experience severe episodes of impaired air quality throughout the Wasatch front and the PSC should support all measures, such as solar power generation as a means to reduce our local air quality problems. In addition, you should be cognizant and responsive to the responsibility to reduce emissions that lead to climate change. For these reasons, a strong commitment to supporting distributed solar generation is a key component of good public energy policy.

Thank you for considering my concerns. I look forward to a well-considered decision rejecting the RMP rate increase.

## Opposed to solar rate hike

1 message

---

**annethomas239@gmail.com** <annethomas239@gmail.com>

Mon, Nov 21, 2016 at 4:23 PM

To: "psc@utah.gov" <psc@utah.gov>

Hello,

I am a Utah resident concerned about the proposal by Rocky Mountain Power to significantly raise the utility rates for net-metering users. I understand that there is a need for balance among customers given the grid system, but the proposal as it stands is unreasonable and undesirable for the state of Utah. Solar power is a crucial part of energy's future and it seems unwise and irresponsible to drive it down, as well as unfair to effectively eliminate that option for future energy-conscious users.

I ask the Public Service Commission to do all they can to come to a more reasonable compromise with Rocky Mountain Power that allows for the future of alternative energy in Utah rather than favoring the traditional monopoly

Thank you,

Anne Thomas

## Rocky Mountain Power Solar Rates Proposal

1 message

---

**Ryan Berke** <ryan.berke@gmail.com>

Mon, Nov 21, 2016 at 4:26 PM

To: psc@utah.gov

Hello,

I am a resident of Logan, Utah and I am writing to you concerning a proposed rate hike by Rocky Mountain Power. As I understand it, Rocky Mountain Power wants to charge customers with solar panels at higher rates than they charge customers without solar. This is unacceptable. During the hours that solar is in use, it costs them no money (aside from lost sales) for solar customers to produce their own power. During the hours that solar is not in use, it costs them the same to create power for solar users as it does for non-solar users. What they're asking for amounts to them charging for energy which the solar users are producing themselves.

Please do not approve this rate hike.

Thank you,

Ryan Berke

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky Mountain Power solar rate proposal Dear Governor Herbert, I am writing to ask for your support in turning down the rate proposal Rocky Mountain Power (RMP) wants to impose on new rooftop solar installations. The study conducted to support this rate is not accurate or acceptable. We need an independent unbiased party to perform a transparent evaluation of both the costs and benefits of rooftop solar. Any change in rates needs to be derived from that and go through the regular process. The deadlines both for comment and decision by the PSC are too short. Please ask the PSC to commission an independent study and abide by the results. I have rooftop solar that was

installed by a local company that will likely go broke if this passes. I drive an electric vehicle so that I'm not contributing to our air quality problem. This rate proposal would punish the growing number of Utah citizens who want to do what I'm doing. I believe that citizens of Utah want clean energy choices. Case in point: RMP's solar farm is sold out. If this rate proposal passes, rooftop solar will not be economical for anyone and people will have no choices. RMP will have protected their bottom line, but at a tremendous cost to progress in our state. You have set energy efficiency goals. Allow rooftop solar to help us meet them.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Questar Infrastructure Rate Bill Dear Governor Gary Herbert: It has come to my attention that Rocky Mountain Power is attempting to monopolize on the energy market in the state of Utah through attacking future solar-interested residents and fining them for choosing an alternative energy. This is deplorable, and I demand that you stop Rocky Mountain Power from passing this bill. Utah residents have the right to choose the energy methods their homes run on without being punished through choosing an environmentally and financially fiscal option for their families. I would also like to remind The Public Service Commission of Utah that many solar companies are based in Utah including Vivint Solar, Auric Solar, Solar City, Solaroo Solar Energy, Powerco Solar, Intermountain Wind and Solar, as well as many others. Passing this bill would presumably harm and deplete many jobs throughout the state. Passing this bill goes against families' rights, business rights, and environmental rights while creating a monopoly for a fossil fuel company. I implore you to do the right thing and deny this bill from passing. Thank you for your consideration. Sincerely, Karlie Hansen

Thank you.

Dear Rylin,

Thank you for your email to the Office of the Governor regarding Rocky Mountain Power and solar energy regulations. I have been asked to respond on behalf of Governor Herbert.

I followed up on your concern with the Public Service Commission (PSC). It is the Commission's policy not to comment on open cases/dockets they are adjudicating. However, your stance and explanation have been recorded and forwarded to the PSC. Your stance will be taken into consideration during the upcoming months of deliberation. To view the history/status of this case and the corresponding public comments, please visit the following url:  
<http://www.psc.utah.gov/utilities/electric/elecindx/2014/14035114indx.html>

Our office encourages you to continue expressing your opinion on this critically important matter. You have already sought out the correct avenues to make your voice heard and we thank you for your civic proactivity.

Kind regards,

Harry Jones

**Request** (Open): Hi, Governor Gary Herbert, this is heron Watson. I live in 946 West 2860 South Syracuse, Utah, and I currently am an owner of blue skies solar, and I just wanted to let you know that I'm my family 5 children my wife will be personally impacted by letting the commission approve this Rocky mountain power initiative that they're trying to very quickly and covert Lee pass. It will it will destroy the solar industry just like a has a Nevada and as in Arizona. I've been in the part of the solar industry a long enough to see that these affects our true and real. They're they're not maybe they're they're definite, and I hope is our governor. You will show some compassion towards all of the people working in the solar industry all the veterans that are being trains the reason that president Obama came and visited hill Air force base was to commands on our our program that we have where we were better. We're training veterans to transition into the solar industry that that would be hard to do when the solar industry is dead because we allowed to Rocky mount power to Hathaway. So if you care about small business, and if you care about veterans that I hope you'll care about stopping at all costs. What Rocky mountain is trying to do if you have any questions or comments. I can be reached at 800 one 573 5240 and I hope you understand that your your decision on this will impact many many families that other livelihood game. Bye this industry so please fight for us, and I will continue to fight for you. Thank you. Play message

Thank you.

Dear Matt

Thank you for your email to the Office of the Governor regarding Rocky Mountain Power and solar energy regulations. I have been asked to respond on behalf of Governor Herbert.

I followed up on your concern with the Public Service Commission (PSC). It is the Commission's policy not to comment on open cases/dockets they are adjudicating. However, your stance and explanation have been recorded and forwarded to the PSC. Your stance will be taken into consideration during the upcoming months of deliberation. To view the history/status of this case and the corresponding public comments, please visit the following url:  
<http://www.psc.utah.gov/utilities/electric/elecindx/2014/14035114indx.html>

Our office encourages you to continue expressing your opinion on this critically important matter. You have already sought out the correct avenues to make your voice heard and we thank you for your civic proactivity.

Kind regards,

Harry Jones

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Cc: "Joe jzeidner@gmail.com" &lt;jzeidner@gmail.com&gt;

Hello!

We understand the financial concern Rocky Mountain power has but let's find another alternative. The air pollution along the Wasatch front is deadly.

My husband and I, at considerable personal cost, opted to install solar panels on our roof to do what we can to contribute to a solution. We operate an electric car and designed a solar passive house.

The idea that we, along with others who have taken proactive steps to reduce our carbon footprint will now be assessed a fee is beyond frustrating.

I encourage you to review carefully Rocky Mountain Power's data. I've heard lobbying groups have succeeded in thwarting the success of solar panels as an alternative in other states.

I hope that the larger issue of our air quality is kept in mind when reviewing this issue.

Thanks very much,

Susan Dillon

## Opposed to tax credits

1 message

---

**Rex Ward** <rmward@gmx.us>

Sat, Nov 19, 2016 at 10:43 PM

To: Rod Arquette <rod@knrs.com>, psc@utah.gov

I am opposed to tax credits for the same reason that I oppose misappropriation of funds. To give tax credits for anything, whether it be having children, buying a hybrid/electric car, or installing solar on a home or business is simple re-distribution of wealth. Giving tax credits for such things is an example of the government choosing winners and losers. If the solar energy industry (or any other, for that matter) cannot make it on its own merits in the free market, that is, if not enough of the public, free and uncoerced, is willing to pay for it, then it should go the way of the Dodo and the Edsel, or wait until its time has come. Those who are so committed to their notion of environmental responsibility that they choose to drive hybrid/electric cars and install solar on their houses or businesses should do it at their own cost and not pilfer the public coffers. After all, virtue is its own reward and its private practice should not be subsidized by public funds. Thank you.

Rex Ward  
Tooele
