**Solar Power Issues 11-28-16.docx**

173K

Dear Public Representative,

I have been following, with interest, the recent media attention surrounding Rocky Mountain Power's proposal to the Utah Public Service Commission regarding residential electricity produced by roof top solar panels and their rationale to increase the cost of electricity to those citizens who chose to install and use these renewable energy systems as well as all electrical power consumers. In making these claims, Rocky Mountain Power also subtly leverages public opinion by stating our friends and neighbors who would invest in rooftop solar panels threaten everyone's low and stable rates.

In my opinion these requests are masked to be in the best interest of the public when in reality the monopoly held by power producers and their fuel providers are being threatened because it is understood that the market dynamics are changing and the reaction is profit protectionism versus progressive business planning.

The Nov. 10, 2016 article in the Ogden Standard Examiner about Rocky Mountain Power clearly demonstrates that the issue is confusing and it is very easy for the public to be thrown a red herring. A premise in the article is that roof top solar owners profit from an over production of power produced by solar panels being supplied back to the electrical grid. This is just not true in Utah. Net metering in Utah only offsets the power consumed by a customer when utilizing centrally produced power sold by the utility. The homeowner doesn't receive a check from the power company for excess power produced.

Another misleading idea put forth is a homeowner with solar panels is harder on the grid at night when there is no sunshine to produce power. "I think there's a mistaken assumption that people with rooftop solar use the system less, but actually they use it more," Murphy [Rocky Mountain Power] said. "They're not only taking (power) from the system but they're giving it back. They rely on the grid more than anyone else." I believe this is, again, misleading - nothing magically changes at night; solar power homeowners are not using the grid at night more than their neighbor or more than they would without solar panels. The mental model being levied is that the grid is wearing out due to the give and take between a central power plant and the distributed roof top solar power producers feeding the grid. The grid is a static piece of infrastructure that is being filled with electricity. The dynamic is the filling of the grid with power. At most I would think the quality of the power coming from the solar producer should be controlled so the grid is being filled with quality power throughout the day or if there is electrical storage involved, at night as well.

Rocky Mountain Power also implies that rooftop solar is creating additional infrastructure maintenance costs that is being passed through to all consumers. I must ask, if there were no solar would you stop maintaining the system? I also believe that our Utah population is growing fast enough that it is impossible to discern if any increase in maintenance is being driven by solar produced power or other social demands.

Taking another quote from the author of the article, "Besides that, solar customer's power consumption habits have shifted, which are taking a toll on the grid at large, too. Residential net metering customers tend to use more electricity at night as regular residential customers' electricity use tapers off, according to the Rocky Mountain Power study, meaning they still put a lot of demand on the system." This comment does not make any sense. It is inferring because one owns solar power panels they consume more electricity at night. Non sequitur; utilizing solar panels has no bearing on how much electricity is consumed by a user at night.

Lastly, related to the information the public is digesting; it is all being generated by Rocky Mountain Power as part of a study ordered by our own Utah Public Service Commission on net metering impacts to be performed by...Rocky Mountain Power. There is no separation in public interest or corporate profits with this ordering. How did one think the study would read? It is simply offering unfair control to the corporation already profiting from and monopolizing the production of every citizen's energy.

I am also dismayed at Representative Jeremy Peterson's, and possibly others, taking issue with Utah's Rooftop Solar Tax Credit and the impact it will have on Utah education funds. This myopic view can be off set with common sense other action. The tax credit impact estimates I have seen are approximately \$20 million dollars. Gov. Herbert's 2017 proposed budget for education is approximately \$422 million. The perceived impact is about 4.7% of the total budget if the estimated tax credits were not allocated by the state to roof top installations and if the money was actually directed to the education budget.

I would propose common sense. There is no doubt many opportunities to fiscally reign ourselves back but let me identify some areas that easily can be targeted to provide more budget for our education system; and yes, I believe our education system is in sore need of improvement.

First, UTA; the lack of self-accountability and overwhelming self-promotion to the public is unforgivable. UTA is asking for \$387.1 million for 2017 - almost as much as the education budget. This agency, and I mean people and those that allow it of this agency, asks for as much to move a few thousand individuals with no long lasting social benefit as our education system is asking to serve tens of thousands of our communities with immeasurable return to our communities and long term benefits in the education of our populace. Ask yourself, especially if you are representing Weber, Davis, Box Elder, or Cache counties, are those \$500,000 dollar busses, with the \$60,000/year operator, individual benefits in perpetuity, with the continual labor and material maintenance costs something that make sense in these areas? Be honest, is this really efficient use of funds. The idea of mass transit is more appealing than fighting the waste it really imposes if not needed or managed, and yes, I believe it is not managed or held accountable. If you don't think so, please stop in Ogden and watch the busses come and go all hours of the day or night. Make a tally of the riders; I would make a tongue in cheek offer that it may be less expensive to buy these few riders their own vehicle than pay for the gross placement and operation of UTA in these areas. Take 4% from this enterprise. On top of all that, Proposition 1 was ignorantly passed in select counties and of which, relatively unknown to the public, UTA acquires the majority of the funds for little more than feel good projects.

A second senseless waste of public money is fighting the federal versus state land ownership debate; on December 9, 2015 the SLC Tribune reported that the legislature approved \$15 million for lawyers to go to court to fight this issue. I surmise we, as a state, continue to fight this non-starter issue and expend millions unnecessary on lawyers. Again, please ask yourself if you support this through a condescending silence or if you think this is something you should say stop this waste now to. This then is another pot of money that can be redirected to the education system if we were to manage it in the public's best interest.

Another example of wasted funds is money spent on a coal port in Oakland. One that California itself shut down. Absolutely mind-boggling relative to long-range foresight and responsible stewardship.

My plea and interest is that we continue to support roof top solar energy that clearly has so many benefits to the public, our environment, and the promise of a future technology that will be sustainable. Utah wants to believe it is progressive. This is clearly not support in that direction. Please don't hamper the tax credits or allow Rocky Mountain Power to negatively influence the Utah Public Service Commission's stance on rates. I have lived in Utah almost 30 years, lived in South Ogden for all but three of those years, have two children that have been educated in the Weber school system, I do not own solar panels or have any short term plans to purchase them, and I am not a part of the energy profession. I do believe in global warming, am a mechanical engineer by education and experience and lastly, I would like our society and leaders to use common sense in leaving this earth a better place than we started with. It can be done.

Thank you for your time and thoughtfulness regarding this matter.

Reply-To: paul.clark@byu.net

To: psc@utah.gov

To the Public Utility Service Commission

From: Jeffrey Paul Clark

email address jpclark@byu.net

It was with great surprise, as I read about Rocky Mountain Power's attempt to make it not affordable for me to have solar energy. I recently moved from Orem, Utah to South Jordan. Everything seems to more expensive in Salt Lake County. Our water and trash bill along with our sewer bill is almost double what we paid for the same thing in Orem. RMP rates seem to be more expensive here also. We have an Energy Star rated home in Daybreak and after we moved in, we changed all our indoor lights to LED -based lighting and installed a new thermostat (Nest). We have tried to do our best to conserve electricity. We are now at a point our lives that we calculated that we can make an investment in solar energy, where we would own the equipment (i.e. the solar panels and the converters) and at the same time invests the cost of our electricity to the payment to our long-term investments.

It is interesting that RMP will testify that the peak energy producing time with solar panels is in April and May and the peak usage is in June and July. They also state they can buy electricity between two and three cents per kilowatt hour. Two questions for you to consider are: 1.) Do they have the same peak energy production and peak energy usage as I get my own home; and 2.) If they can buy electricity between two and three cents per kilowatt hour, why are they passing the cost of the electricity from their new solar energy farm in Holden, Utah to the consumers of their Subscriber Solar at \$0.117 for each kilowatt hour or their middle rate.

I will be installing a 4.68 kW system which will produce approximately 7260 kilowatt hours per year. I calculated this will save me approximately \$59 per month, so if my net metering was \$15 per month and then a surcharge of \$9 per peak kilowatt hour usage during the dark months of November through March and then the hot months of the middle of June to the end of August, I could be trapped into paying more than I do now for electricity when I own the equipment to collect my own solar energy and turn it to electricity.

It just doesn't make sense to me when Rocky Mountain Power can make on the Energy Imbalance Market approximately \$25 million every quarter, and then have an \$0.07 to \$0.08 profit per kilowatt hour on their new 20 MW sun farm (which will produce over 31 million kilowatt hours each month, and means over \$25 million profit per year for 20 years), can ask Public Service Utility Commission for the chance to then expect the little guy, such as me, to pay them more for getting my energy back to the grid.

I did not do this to take money from the electric company, in fact I was told if I made more power than I needed, I would not be reimbursed for the excess power and in the end I would pay only for the power I would use more than I produced.

If you have any questions please feel free to contact me.

## Say No To RMP

1 message

---

**Ty Diamse** <ty@devpointlabs.com>

Mon, Nov 28, 2016 at 9:45 PM

To: psc@utah.gov

TL;DR

You must say no to RMP rate increase proposal that negatively impacts the Utah solar industry . This greedy proposal removes the incentive to buy solar. We need to promote and incentivize more people to use solar in Utah. Not the other way around.

PSC,

If you approve this RMP proposal then you're punishing people who are actually trying to do the right thing to use clean energy; we need more of that in a state that is ranked 6th in the nation for bad air quality . This is textbook corporate greed at it's finest.

I find it disturbing that your mission statement lacks any promotion of protecting the environment through clean and sustainable energy. I would like to recommend you guys update that because it makes me question your motives.

I trust you guys will do the right thing for the people and the environment.

Best,

-Ty

## Solar power policy change

1 message

---

**Todd Troxell** <slctroxx@comcast.net>

Tue, Nov 29, 2016 at 7:09 AM

To: psc@utah.gov

To whom it may concern,

No form letter, no special interest group blitz, just a letter from a concerned citizen. I write to strongly encourage you to REJECT Rocky Mountain Power's request for a rate increase for rooftop solar customers. You hold great power serving on this commission and as your title would imply, you should serve and protect the public's interests, not corporate interests.

Public policy should encourage good behavior and discourage bad behavior. A small benefit to an individual or family who is willing to make the effort and financial outlay to do the right thing is a small price to pay, be it driving a fuel efficient car, using public transportation, switching to energy efficient appliances, etc, etc. We all breathe the same air and are subject to the same forces that effect our climate, if you believe in such a thing. While I may not choose to take Frontrunner, use light rail or buy an electric car, I do benefit, as we all do. Please do not place any barriers in the way of people who are willing to do good for our community and please do everything within your mandate to encourage it. Toward this goal, please reject RMP's request.

Thank you,  
Todd Troxell

To: [crevelt@utah.gov](mailto:crevelt@utah.gov)

Carol,

I'm writing you because I'm highly concerned about the tariff that Rocky Mountain Power is imposing on our state that will effectively kill the Solar industry in our state. I think solar power is a great way to help reduce harmful emissions and protect our state, as well as keep to help give people options for power. Currently RMP has a monopoly in our state, and I feel they are using it to their advantage to end any competition. The thing that bothers me the most is that most solar customers still use power and remain on-grid, they're just using less, so less profits for RMP . I find this a ridiculous scenario, and I hope you with work with the commission and the governor to block this. This is aside from RMP's excessive power outages they had throughout much of this past year. They're not trustworthy, in my opinion, and therefore, I would like options.

Arizona is a great example of a state that let the power company shut down their solar industry . Please don't let it happen to Utah.

Sincerely,  
Nicole Peterson  
Resident of SLC

Dear Ms. Revelt,

It has come to my attention that you might be the person to contact about Rocky Mountain Power 's attempt to recalculate solar Net Metering. While I appreciate Rocky Mountain needs to pay for infrastructure, the proposed ways of calculating would be grossly unfair to solar clients and would discourage future solar investments. We opted to install solar on our roof to cut down on power costs and because we are concerned about making wise energy choices for the future. Rocky Mountain seems to be making these choices more out of concern for profits and their monopoly than out of real concern for infrastructure. I would ask you to please think about what is best for Utah consumers and for the long run of the planet when making your choices.

Thank you, Jenny Kokai

To: [crevelt@utah.gov](mailto:crevelt@utah.gov)

Dear Ms. Revelt,

I never write these sorts of things and I hope I'm contacting the correct person but I've been informed you are the one. I wanted to write to oppose the proposed solar tariff Rocky Mountain Power wants to enact. I believe it will essentially eliminate solar as an energy option in the state. It is mind boggling to me that RMP could potentially use their monopoly in such a disgusting way. Especially in this state, with some of the foulest air in the nation. It just serves to illustrate their greed and disregard for the health of the residents of this state and our planet. We need green, renewable energy I would think that outside of political rhetoric surrounding climate issues we can all find common ground in simply not wanting to dwell in pollution and doing what is better for the environment we all have to share. Please don't let RMP's greed kill solar in Utah!

I'm a resident of West Jordan and was raised in Taylorsville. I want to continue calling Utah home but the environmental issues alone are making me question my future here. I hope this proposed tariff is defeated. Thank you for your time and consideration.

Do not allow Rocky Mountain Power to use their monopoly to squeeze out solar power . Their new pricing scheme will make solar out of reach for the average home owner . Solar is a great industry for Utah and is providing great jobs for our community and building a solid green energy footprint that frees us from reliance on fossil fuels and helps keep our air cleaner . Growing solar power in Utah is something we should all be behind, do not let Rocky Mountain Power make this an affordable dream for the average home owner . I want to install solar on my own home in the near future, but it will not be feasible with the new pricing scheme.

Subject: support solar power

To: "crevelt@utah.gov" &lt;crevelt@utah.gov&gt;

I am deeply disturbed by the possibility of a tariff on solar power in Utah. We need to do everything we can to promote rather than hinder the growth of solar power in the state (and the world). Please do not let Rocky Mountain Power push back the progress that Utah is making to address important energy and climate issues.

My husband and I will be buying a new home next month. It is bigger than we need, and we worried about using more resources than we need and unnecessarily contributing to our state and nation's energy and climate problems. We decided we would go ahead and buy it with the idea that we will install solar panels. State regulations should not penalize citizens like us who wish to act responsibly about climate and energy realities. Please do everything you can to stop this.

Thanks,

Subject: Leaders must support solar industry

Utah Leaders Have an Obligation to Support Solar Energy as a Choice

At this time Rocky Mountain Power Company requests tax on solar and regulators request cancelation of tax subsidy for competitors' consumers.

Utah Regulators have an obligation to the people of Utah to not do away with the tax credit for solar power users. Rocky Mountain Power (RMP) seeks to be the monopoly on power for the area. Even as RMP continues its own solar power plan for current subscribers it is working towards preventing competition in the solar energy arena.

Solar will be the energy of the future. RMP knows this and has solar energy as part of it own operational plan. It offers subscribers the option for incentives per volt of energy from RMP Panels. They seek to be a single provider on the market for access to this energy as well as the revenue.

In favor of competition and so that consumers will have choice, the PSC and regulators should continue the tax credit for solar users that choose competitive solar companies. (other than RMP). For years' consumer taxes have subsidized the power utility operations and revenues. If RMP receives subsidy then in fair competition and consumer choice which should be the main interest of the PSC, so should the new solar energy providers continue subsidy. The government representatives should not endorse subsidy for one and not the other.

More and more consumers are voicing their choice. New solar power companies are the quickest growing enterprise along the Wasatch front. They are employing our family members and offering renewable energy sources and a future with cleaner air.

Supporting and allowing the solar power company choice for consumers will spur innovation and create better technology and create a better economy. This was seen with deregulation of the phone company in 1996 and the Telecom Act.

Innovation such as voIP, cell technology and internet in Gigs technology . All was available quicker because of the innovation and the private providers that seized on that opportunity at that time to provide the public communications choices in the market and to compete in the market.

PSC and local elected officials have an obligation to foster competition, work toward clean air for our families and develop a plan that also grows our local economy. They should not preserve the single utility's corner on the market.

Additionally, legislators and PSC have an obligation to study a carbon tax on the users and providers of fossil fuels as means to money needed for education.

Solar energy must remain a competitive offer to subscribers in the market place and leaders of Utah must realize that fossil fuel must not be the only choice in the future.

## Rocky Mountain Power - net metering tariff

1 message

---

**spaxman1958@gmail.com** <spaxman1958@gmail.com>

Tue, Nov 29, 2016 at 8:46 AM

To: psc@utah.gov

Cc: angelikap99@yahoo.com, spaxman1958@gmail.com

Could you please tell me how I can submit comments on Rocky Mountain Power 's Net Metering Tariff?

I am very much opposed to the tariff and the reasons behind it. RMP argues that they are running short of power and capacity to deliver power, by installing the automated air-conditioning disconnects. They also have offered incentives to consumers to install solar power, now are arguing that they can't make enough money due to the number of solar panels being installed and now want to penalize those that have or will install them. They cannot have it both ways.

The investment we have made to install solar panels is barely penciling out as it is on a benefit/cost analysis. We installed them to be more independent and be more environmentally sensitive.

Please do not approve the Net Metering Tariff.

Thank You,

Scott Paxman

Ms. Revelt,

I've heard that you're a decision maker on whether Rocky Mountain Power can increase the price for those who use solar power. I live in Provo, and I'd like to encourage you to say no. Please do not increase the price of solar.

Fossil fuels are not a good long-term solution for our environment and our power needs, but we'll never make the transition away from them without serious investments in alternatives like solar power. Please help people who want to do their part for the environment instead of hurt them.

Thanks for your time,

Rebekah Weaver

November 29, 2016

Dear Public Service Commission,

As a residence in the avenues area of Sale Lake City I have seriously considered installing Solar Panels on my home. It would be the responsible thing to do, it would cut down on power supplied from coal fired power plants thus helping protect the environment. The problem is a loss of revenue to RMP. RMP proposes a sur charge to me to cover their loss. If I am face with this surcharge I will not consider the expense of a solar panel system, too bad for the environment and our clear sunny days.

Sincerely,

ER Smith

## Do not approve RMP Rate Proposal

1 message

---

**Ron Sawdey** <rjsawdey@gmail.com>

Tue, Nov 29, 2016 at 9:53 AM

To: psc@utah.gov

I am writing to urge you to reject Rocky Mountain Power's (RMP) recent rate change proposal regarding 'net metering' customers. I believe that their proposal will stifle future homeowners from making a personal investment in rooftop solar (as I already have). This is not only unfair to those homeowners who desire a small measure of energy independence, but will curtail the creation of solar jobs, and diminish the environmental benefits of solar generated electricity.

Please reject RMP's self-serving initiative and decide in favor of Utah's citizens.

Respectfully,  
Ron Sawdey

To: [crevelt@utah.gov](mailto:crevelt@utah.gov)

Have done all the research to add solar panels to my home. If I install them myself (yes I have the technical know how to do so) with rebates and reduction of power bills, they will pay for themselves in about 5 years. However, if RMP's proposal is approved, they would not pay for themselves in my lifetime. This eliminates any cost incentive I have to go solar. Additionally, this proposal seems like a thinly-veiled campaign by RMP to have the public pay the business cost of transitioning from coal plants to solar generation. Please register my opposition to this proposal.

Subject: Rocky Mountain Power solar issue  
To: [crevelt@utah.gov](mailto:crevelt@utah.gov)

Ms. Revelt,

I was told that you are the person I should contact regarding my opposition to the increased metering cost for solar panel users. If you are not the person I should be contacting, will you please forward it over to the correct person?

We have a MAJOR issue in our state with relying on fossil fuels which, in turn, pollute our air and cause cancer and other health problems for our residents. It is so vitally important that we move our state over to renewable energy sources. Solar is a wonderful source of energy in our state, and since it is becoming more affordable for customers, it could be a crucial component to solving our air quality crisis. I am of the opinion that those who are still utilizing fossil fuels as their energy source should be paying more than those who are using renewable energy sources. I don't think that continuing to pollute our air and burn through all our fossil fuel sources should be incentivized. I think it should be the other way around...that is the only way we will see real progress in our state.

I, personally, do not have solar panels on my home as I am a tenant and can't afford that type of improvement right now. But, I think that once having solar panels becomes a cost savings, then that is when we will see real change on the Wasatch Front. I think this rate issue is taking a step in the wrong direction.

Thank you,  
Ali Avery

Subject: Rocky Mountain Power/Solar Panel Users

To: [crevelt@utah.gov](mailto:crevelt@utah.gov)

Hello Ms. Revelt,

I am writing to you to express my opposition to increased metering costs for solar panel users. Our community faces a health crisis each winter with inversions and polluted air settling in to our valley. Some estimates claim this pollution causes up to 2000 premature deaths in our community each year. It is absolutely unacceptable! Our government representatives should recognize the cost of this pollution to our community, and aggressively seek ways to clean up our air. Not only for the sake of our health, but also for our economy. Utah is unique in that we have near perfect conditions for solar panel use. It is still quite expensive for individual consumers and businesses to make the investment to install solar panels. We should be rewarding this investment in our community, not discouraging it. I am extremely concerned that Rocky Mountain's proposal will crush our growing solar industry. Please do not allow that to occur, and please help us continue to clean up our air!

Thank you,  
Jessica Rawson

## stop RMP fees for solar

1 message

---

**Mullenax, Murry** <MMULLENA@travelers.com>

Tue, Nov 29, 2016 at 1:03 PM

To: "psc@utah.gov" <psc@utah.gov>

Our state needs every job in every industry. The Solar industry directly and indirectly employs thousands of people in our state, and we don't need Rocky Mountain Power killing jobs of thousands of people just so they can make more money and keep us dependent on their coal plants. We are struggling and don't need this negative impact on growth. Fees, fees, fees - everywhere I look. Please decline the RMP proposed fees for solar installations.

Thank you – Steven Mullena

## Rocky Mountain Power Rate Increase

1 message

---

**Barbara Nickle** <barbaranickle@gmail.com>

Tue, Nov 29, 2016 at 3:40 PM

To: psc@utah.gov

Dear Sir:

I most strongly object to the power rate increase that Rocky Mountain Power is proposing. Home owners and business have been encouraged to spend thousands of dollars on solar arrays to help the power grid. Now they want to punish us for our efforts.

Please see that there is no increase, a more fair proposal would be for Rocky Mountain Power to give their solar customers a decrease in their power rates.

Thank you for your time and efforts.

Sincerely,

Barbara A. Nickle

**Request (Closed):** Subject: Energy independence Hello, and to whom it may concern and to who could help us... we have recently benefited our community our state and local power situation by investing many dollars and time into a new solar system for our home. We have become solar customer enjoying the ability to producer our own power. It concerns us very much that there is what seems to be a monopoly company trying to raise rates and overcome our choice to provide ourselves with clean natural power. We would ask very strongly that you consider the time, investment, and future benefit to our family in perpetuity of this investment that we have made in solar power. We would also ask very strongly that you allow people to enjoy the ability to produce power and be self-sufficient on their own in the future. Utah is a state that is in the black. We are amazed at that and feel citizens should be allowed to also maintain their personal providence in the black. Solar power is an option to be able to provide for themselves in the case of emergency with a power source that they have pre-planned, prepared for, and paid for by their sweat Blood and Tears. We would appreciate that you decline the Monopoly companies request to defeat the individual and their desire to be self-sufficient. We would also ask very very strongly that those who have power produced by solar at this time be able to recoup their investment with the contract they have made with the power company for perpetuity. We thank you for your time and consideration

in this matter and would remind you that the personal freedoms that we enjoy were based on individuals being able to choose for themselves. This is one of those cases given to us by the Founding Father's and our God to allow us to be the purveyors of our own destiny. Thank you for your time and consideration in this matter , we would hope that you empower yourselves to protect our individual rights and freedoms in this case. Thank you again, David Hull

**Subject:** Public Service Commission

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be

greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.
