Rocky Mountain power increase

1 message

Eric Duclos <DuclosEJ@ldschurch.org>

Tue, Dec 6, 2016 at 7:07 PM

To: "psc@utah.gov" <psc@utah.gov>

To whom it may concern;

I recently purchased solar for my home and I strongly oppose the proposed rate hike from Rocky Mountain power that will negatively impact my family and our ability to pay for this solar unit. I am trying to be a consumer who cares about the community and be a responsible member of the community and purchased solar as my part. If the proposed increases take effect that eliminate the positive impact of the solar I purchased it would not be right. Please add my voice as one who opposes this action.

Thank you,

Eric Duclos

RMP's Roof-top Solar

1 message

Alan Ernstsens <alan.ernstsens@gmail.com>

Tue, Dec 6, 2016 at 7:13 PM

To: psc@utah.gov

Dear Commissioner.

My name is Alan Ernstsens. I'm grandson of Severt Ernstsens, a Danish transplant to the state of Utah. He migrated at the behest of the Mormon Church back in the 1800s. His mission was to settle the area around Loa.

Much has changed between those days and these, but the Sun shines pretty much as it used to. One thing that has changed is how our communities have been made more and more distant from our utility investments while privatization and profiting have led to a small number of corporate chieftains being able to make a bundle while co-opting from the rate-payer practically all decision making. For instance, Rocky Mountain Power is challenging the community's wish to self direct, for good reasons, toward proliferating roof-top and shared solar; their baseline motive is all the way over to protecting the profit picture they have come to see as their due. The community and environment be damned.

Rocky Mountain Power is clearly using a significant part of its already sizable profits attempting to direct and distort the policy of a Public Utility. Ratepayers are asked to further sacrifice, even as our incomes stagnate; only to let this behemoth corporation deny us the world WE want. This is Democracy? I don't think so.

I could very easily argue that if this selfish ploy is approved, Roof-top solar, programs and micro-networks that enable energy sharing will only pick up in pace. The profiteers might then find themselves in control of an ever shrinking back-water coal-burning operation. We wouldn't want that, now, would we.

Sincerely, AlanErnstsens [5412220266](tel:5412220266)

Dear Sirs:

I am writing to comment on your proposal to raise fees on net metering accounts. I am sure the utilities would like to see this happen as it allows them to increase their bottom line. I understand their point concerning their subsidizing hook-up and infrastructure charges by overpricing the actual electricity. I suppose this was a viable mechanism at one time but it seems to have outlived its usefulness. Perhaps it is time to de-link the transmission from the generation and charge the actual cost for each to each customer. I would certainly support a bill that charges for the infrastructure and a separate charge for the amount of electricity used.

If the base price increases much more at some point it will be feasible to install a battery set and go completely off the grid. Back-up generators are not that expensive if we need additional power. I think there are economies of scale so I would not want to become an independent generator but all things become a possibility as the status quo becomes more expensive. Please take note of this desire in your future dealings with the electric utilities.

Rocky Mountain Proposed changes for solar

1 message

dawn opoulos <dawnop@gmail.com>

Tue, Dec 6, 2016 at 10:35 PM

To: psc@utah.gov

Dear Sirs:

I would like to express my concern over the proposed rate hike Rocky Mountain Power is requesting for solar customers. I put solar on my home this year, not because of the money savings, but because of the environmental factor. It was decision we made because of the the smog that we endure in our city every year. It also had to make economic since, which it did at this time. I spent thousands of dollars putting solar on my home. I expected to pay my fair share for any power I used that exceeded my solar generated power. I knew I would have months that I would run short by small amounts and other months that I would have a surplus. I have only seen the changes the last two months, however what I have seen is that my first bill was \$9.05, which was pretty much the base fee and taxes that Rocky Mountain Power charges.

I understand Rocky Mountain has done research that claims that solar owners are causing non solar customers to pay more. They want to penalize new solar customers by raising the minimum monthly fee, but also charging outrageous fees per kw.

power that goes back into the system that they get to use for other clients. The surplus power that goes back into the system reduces their costs. When I run short on power and use the "grid" it will not be at peak times, it will be when there are shorter days in the winter. During the summer months peak times, I am using my energy from my solar panels, not drawing from Rocky Mountain.

Rocky Mountain Power has an incentive to penalize solar, because it interferes with their profits. They are heavy users of fossil fuels, which ruins our climate and contributes to smog. Solar produces clean energy that does not put pollution back into our climate. This means that we have clean air to breath if we are able to use more solar. Please do not allow Rocky Mountain Power to cheat Utah from being a state that offers the public the ability to have clean energy. Please do not allow Rocky Mountain to continue to have a monopoly in Utah. Please allow the public citizens the right to choose which type of power they want without penalizing them so that solar is affordable.

Please say NO Rocky Mountain's request to raise the fees for solar customers.

Thank you,

Dawn Opoulos

Brad,

Renewable Energy is something that is good for us. Solar energy is the most affordable, reliable, never-ending resource that we have. The Federal Government has seen the importance of solar power and has invested heavily in its development. States have set goals, mandates, to have 15-20% of all energy we use come from a renewable resource by 2020. Our state has invested in the people of our state to help reach this mandate and endorse solar power as a viable option of renewable energy.

For years so many people have worked hard to help solar power gain traction, for renewable energy to be a reality, for it to become more mainstream and accepted. All of this progress that has evolved could not have happened without the help of Net Metering. If you take away or diminish the Net Metering portion of this effort, all the years of gain, all the financial support the federal, state and local communities have contributed for decades will be destroyed. Wasted. Why did we even try. Rocky Mountain Power exists to support the people of Utah. They are a part of Pacific Corp who is a massive company offering a public service. It is not right that they can decide that solar is too competitive and can just shut it down. With a stroke of a pen, the residential solar industry is dead. Who wins? Not the citizens of Utah. Not renewable energy and a better future for our children. Not all the 4000 people who are employed within the solar industry.

At a less than 1% amount of impact to Rocky Mountain Power, it really doesn't effect them either. We should look at what is best for the people of Utah. The impact is less than 1% to RMP, and its taken 40 years to make that impact. I see the role of RMP to be another member of the team that is helping support Renewable Energy. They are a monopoly, and should remember that their main goal is to serve the people of Utah. They have an unfair advantage over competition, solar, and its not right that they can kill the competition because they are afraid of what might happen to the market in the next 10 to 20 years. Become more efficient like any other business, don't abuse the power that comes with being a monopoly.

There are only a few days left to fight the good fight, please help us.

I have received emails from you. One challenge is the solar industry is sending so many to us but most are not our constituents. I am watching this issue and how RMP navigates this.

On 12/4/16, 11:53 PM, "Theron Watson" <teedub52@yahoo.com> wrote:

Brad,

I've reached out to you several times, sent a large amount of information about the topic, but I've yet to hear back from you or anyone from your group. This Rocky Mountain Power initiative to kill solar is something that will directly effect about 4000 jobs, many of those in Davis county. I hope that you are fighting for the people on this issue, please let me know your insight on this topic.

The Public Service Commission is voting on this topic on December 9th. I've called and written the Governor and the Commission, I think they just need to hear more voices to let them know that killing the solar industry is not OK.

Thank you,

Theron Watson

Deny Rocky Mountain Power net metering request

1 message

chris magerl <daymag@hotmail.com>

Wed, Dec 7, 2016 at 12:16 PM

To: "psc@utah.gov" <psc@utah.gov>

I am writing to urge you to deny Rocky Mountain Power's request to dramatically change the price of electricity for rooftop solar users.

Granting RMP's request will kill the rooftop solar option for home owners, and consign all of us to a continuation of the well-documented hazards of breathing Utah's polluted air.

I urge you to take seriously your responsibility to protect rate payers by taking seriously the effect this punitive RMP request will have on all rate payers' health.

Thank you.

RMP Attack on Home Rooftop Solar

1 message

Tony & Jeanne Pombo <tnjpombo@comcast.net>

Wed, Dec 7, 2016 at 12:25 PM

To: Utah Public Services Commission <psc@utah.gov>, solar@utahcleanenergy.org

Cc: Alice Mulder <amulder@weber.edu>

This email is to strongly protest against Rocky Mountain Power's recent unsubstantiated proposal for a tariff increase for "new" net metering customers. This proposal is a thinly veiled assault on homeowner choice for placing solar panels on our roofs. We were required by a law instigated by RMP, to engage net metering in order to obtain their (RMP's) "inspection and approval" to start generating power with solar panels that we purchased and paid to install on our roof.

Now it is clear why RMP was so keen on net metering! For their next steps in their assault on rooftop solar, this proposal is just the next step, as evidenced by the third paragraph of their letter sent to net metering customers, dated November 18, 2016.

If RMP was sincere about their public statements of support for home rooftop solar power generation, why would they insist on net metering? Without net metering, the only effect that RMP would see is that we would be using less power from the grid, which should be a good effect.

Furthermore, if they were sincere, why wouldn't RMP offer solar panels at a volume discount to homeowners in order to take advantage of the free real estate that homeowners would likely offer in return for reduced power bills.

We are not people who subscribe to conspiracy theories, but power companies in general (along with too many politicians) and RMP specifically seem much more interested in maintaining the control that the status quo of money and markets provides for executives and investors, than they are in customers and mother earth.

Please fill your responsibility as Commissioners and reject the RMP unsubstantiated proposal and insist that they address the many logical questions that people with good intentions are asking.

Sincerely, Tony and Jeanne Pombo

Rooftop Solar

1 message

Wilson Dippo <wilsondippo@gmail.com>

Wed, Dec 7, 2016 at 2:08 PM

To: psc@utah.gov

Hi,

My name is Wilson Dippo - I grew up in Salt Lake City (where my parents still live) and now live in Boise Idaho. I tell anyone who will listen that if it weren't for the air quality, Salt Lake City would be the perfect place to live. The access to mountain recreation, the small-town/big-city mix, the Utah Jazz, and closeness to so many national parks make Salt Lake nearly perfect for me.

That said - growing up I was an athlete - a cross country ski racer. I skied for the Utah Nordic Alliance racing team. I always wondered what effect the air quality in the valley had on my breathing - I had a lot of teammates who had it worse than I did, including some who had to quit the sport.

Oftentimes the Mountain Dell golf course (my primary training center during the winter) was out of the inversion, but those days that the inversion made it that high up were miserable - after a few days of that, the top layer of snow would take on a darker color.

This is a long way of saying PLEASE DENY Rocky Mountain Powers request to change the price for rooftop solar users. Forget global warming, forget politics, just wait a few weeks - at least once in the next month the inversion will set in. The next time that it does, go outside and take a deep breath and decide whether the profits of Rocky Mountain Power are more or less important than the air those in the valley are forced to breathe.

Thank you for your time,

Wilson Dippo

Request (Closed): Subject: Solar Survival in Utah from 4th Generation of Utah entrepreneur Dear Governor Herbert, As a 4th generation entrepreneur of this great state of Utah, I wanted to write you regarding one of the biggest potential issues facing the future of Utah's business community: our great Solar Industry! My great grandfather, Maurice Warshaw laid the ground work for one of the most prosperous industries in Utah when he found Grand Central food chains. As his legacy of not only being a business giant in Utah continues, so does his overwhelming generosity to many foundations throughout the state as his statue in the Utah Capitol building serves as a reminder of how great industries can be founded in Utah as a center for innovation, creation, and sustainability. My father and grandfather continued the entrepreneurial traditions set but my late grandfather Maurice Warshaw, and continue this day with myself as a consummate entrepreneur. Over the past 3 years, I have worked to build one of the fastest growing solar companies in the country: Evelar Solar. With a handful of successful previous exits in the technology space, I was drawn to the appeal of Solar and not only the positive environmental impacts associated with clean energy, but also the cost short-term and long-term savings that could be realized by individual customers. Since its founding date in 2013, Evelar has grown to \$50 million in annual revenues with over 150 employees in Utah alone. We have experienced tremendous growth, with the vast majority of our customers in Utah. As you are aware of the current proposed tariff and net meter structure proposed by Rocky Mountain Power; this is one of the most concerning proposals I believe our state and commission will face over the next several years. The entire country is watching to see how Utah will respond and whether our state will continue to be a leader in renewable and Utah sustainable energy, including many technology and national companies currently in Utah and/or considering to relocate to Utah. The proposed changes to Net Metering by Rocky Mountain Power are no different than the proposed changes that their sister company, PacifiCorp made in Nevada. The net meter changes that passed wiped out the solar industry in Nevada overnight which included thousands of jobs. Should this net meter proposal pass and be accepted by the commission, the impact to Utah jobs in solar will be

devastating and irrevocable. My hope with this note is to add insight and context to the potential impact of one of the most thriving communities and industries in Utah and I hope that given my families long history of providing thousands of jobs through a variety of business ventures, that you would highly consider assuring that the Solar Industry continues to be strong in Utah. I truly appreciate your time in reviewing my request and look forward to continuing to provide and grow many more jobs in Utah as we project to grow 3x in 2017 alone (assuming that this request is rejected by the commission). Thank you again for your amazing leadership as Governor in our great state of Utah. All the best, Spence Angerbauer CEO Evelar Solar www.evelar.com (801) 573-7111 spencer.angerbauer@evelar.com

Thank you.

RMP-New fees for solar customers

1 message

Katie Pappas <kpappas56@yahoo.com>
Reply-To: Katie Pappas <kpappas56@yahoo.com>
To: psc@utah.gov

Wed, Dec 7, 2016 at 4:44 PM

To Whom it may concern,

We had solar panels installed on our roof 4 years ago. We won't be affected by the new fees that RMP has proposed, but I am opposed to this abuse of power by a monopoly. The benefits of solar power to the community in terms of clean air and a livable future can't be quantified. Solar users help RMP by adding power to the grid during peak times. They also help RMP delay increased infrastructure costs. RMP is developing it's own solar projects so they must see the writing on the wall, but are trying to stifle competition. I believe their actions will adversely affect local businesses that are addressing the critical issue of climate change. It's just a matter of time before people will be able to get off the grid completely. Please put a stop to this backwards proposal.

RMP vs Solar

1 message

Jerry Baker <jerry.baker@hotmail.com>
To: "psc@utah.gov" <psc@utah.gov>

Wed, Dec 7, 2016 at 4:54 PM

I am writing this in support of solar in Utah and in opposition to RMPs attempt to kill solar. Only any idiot would think that RMP is trying to do something that supports solar. If I reduce my consumption levels, they don't raise my rates so why do it if I have solar. The only reason is because they don't want the competition. Solar reduces pollution and provides truly clean energy.

Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Constituent Email:**Mobile #:****Home #:** (801) 673-9794**Office #:****Subject:** Public Service Commission

Request (Closed): Yes, this is Jim Rueckert. I'm concerned that it's so difficult even find a phone number to call you guys, so that's number one concern, but the reason I'm calling is on behalf or not in behalf of the cover the proposal made by Rocky Mountain 2 raise the price on those that have solar energy. I'm well aware that that's in the proposal has. Claus that protects bills you've already got solar but I think it's wrong for them to be raising the rates on this. I would like to talk to someone regarding this I think this be open. Can last year when we allow Rocky mountain to no longer go before the commission to do rate increases these guys are not looking out for our interest although. I have solar panels already this will come back to bite me in the future, and i know that if it will affect my children who I'm trying to put solar panel fit for that's the right thing. We should be doing to Dickinson. Take care of energy, but we should not be force with an ever increasing tax just because we do the right thing please call me back 801 673 9794.

Thank you.

Subject: Public Service Commission

Request (Closed): Good afternoon. My name is Dustin Hanson. I'm a resident of logan, utah. I my my phone number is [480 234 7071](tel:4802347071). I guess I was just calling to give you my opinion in my concerns about the recent developments with Rocky mountain power and the new proposal that they're upfront thing. I guess me personally in our family. We we wouldn't be able to afford solar if that did pass, and I know there are many families that are in the exact same situation as us middle income lower income who wouldn't be able to have solar if that was to come about and I just wanted to share my concerns about that anyway, you can call me back anytime. Thank you. Bye.

Thank you.
