Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Ms. Margaret Hostetter

Lauren Barros <lrb@laurenbarroslaw.com>
Reply-To: lrb@laurenbarroslaw.com
To: psc@utah.gov

Mon, Aug 17, 2015 at 4:20 PM

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Aug 18, 2015

Utah Public Service Commission

Dear Service Commission,

I am personally angry at the disgusting environmental damage being done by extensive coal burning for power generation in Utah. Utah as a state is ideally positioned to be able to rely extensively on solar energy for power generation. And the technology is now less expensive than ever. But our backward-looking utility company continues to favor coal, totally oblivious and inattentive to the damage that this is doing to our environment and to the health of Utah residents.

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to reject outright PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Where in all this is the State of Utah and Pacificorp's plan to meet the President's 32% reduction goal? That is vital, and nothing should be approved without that plan in place. If necessary, the existing coal plants should be shut down until a viable plan is in place.

Nancy Evenson, AIA

It is the height of irresponsibility to continue pursuing business practices which are aggressively destroying the air that we breathe. This is the most gorgeous place in the United States, and the job of the Commission is to ensure that business is conducted responsibly. With the massive amount of sun and wind we have in this part of the country, there is absolutely NO reason to continue to use coal to generate electricity.

Greed should not pollute our air, land, water, plants, children, or Your Decisions.

With the general consensus in the country and the gradual decline of using coal for energy, it is plain common sense to spend the public's contributions on clean alternative natural energy. If other States have woken up and are making the change, why are you so reluctant to make a change. Don't waste money on dirty old smoke stacks scrubbers & collars as it is not effective as you know!

You have the opportunity now to make a contribution to reducing climate change for this State & the worlds health. Don't waste it!

Aug 18, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Dr. Dennis Welch

Aug 18, 2015

Utah Public Service Commission

Dear Service Commission,

I am a recent Utah resident having moved here just 2 years ago from New York. Over the last 2 years I have seen large and encouraging changes in the landscape. Large multinational corporations are choosing Utah to do their business and bring along the talent needed to be successful. These young new Utahns need places to live and are moving into formerly dangerous neighborhoods or carving out space in new neighborhoods all over Northern Utah. One thing about Utah truly scares me and it's the air quality. I have noted more "red zone" days here in summer and winter in the last 2 years than I saw in 10 years when living in New York.

How can Utah continue its rapid economic growth without ensuring its new citizens basic good health? I understand Utah has a long and rich history in coal and other forms of development but our lungs can only take so many pathogens. I encourage our political leadership to reconsider its current path and think of the children being born here in Utah right now that can drive Utah to the very top of the economic landscape right without coal. Without PacifiCorp.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

It is irresponsible and unconscionable that they would continue to burn toxic coal, rather than use some of their extraordinary profits to modernize and reduce greenhouse emissions, limit health damaging byproducts and destroy natural resources with dirty coal.

As our watchdog for public health and the impacts that public utilities have on the citizens of Utah and our environment, PLEASE reject this request and insist on renewable energy resources. Our future generations are depending on you!

Utah Public Service Commission

Dear Service Commission,

As a person that suffers from Asthma, this is a very important topic for me. Coal power generation causes significant harm to people and needs to be eliminated. I would favor Nuclear over Coal at this point. Utah's geography traps the pollution in the highly populated valley areas. It's simply a bad policy to allow more coal burning.

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. Utah Public Service Commission

Dear Service Commission,

Making a 20 year plan that relies on coal is very short-sighted. please do not prolong the life of coal plants. they are dirty both locally an globally. Please invest in renewable energy sources.

Sincerely,

Dr. Phyllis Coley

Aug 18, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Ms. Lise Fischer

Mon, Aug 17, 2015 at 7:02 PM

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Ms. Autumn Hickman

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.
