Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Dr. Eric Ewert

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. My family already suffers from the effects of Utah's poor air quality. Many days my children who now have asthma, are forced to stay indoors. I also have adult onset asthma and work from home on poor air quality days. We have already invested in a clean air closed system for our home as well as room specific air purifiers. We have done all we can to help ourselves, now we need your assistance.

I am extremely disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants! I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Aug 19, 2015

Utah Public Service Commission

Dear Service Commission,

Please do not take an action that will not reduce the amount of coal burned in Utah. Please invest in natural gas and renewable resources. The cost for this is less than the cost of breathing dirty air. We need to reduce amount the pollution from its present level.

Brian Rutherford

Sincerely,

I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Aug 19, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources.

I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years.

There are cleaner, safer, and less risky alternatives and Utah's air is bad enough - lets clean it up. Pacifi Corp has already made tons of money here in Utah - its time to reinvest in Utah's future and look at cleaner energy sources.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants.

I urge the Commission to reject PacifiCorp's long range plan - until they formally commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Lets look at NEW energy options that don't involve coal

Sincerely,

Mr. Ted Hallisey

**Richard Csenge** <jiw@gwi.net>

Tue, Aug 18, 2015 at 10:18 PM

Reply-To: jiw@gwi.net

To: psc@utah.gov

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Richard Csenge

Aug 18, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Its embarrassing that we haven't caught up to other large cities standards for clean consumption. I know we have intelligent people running this state but I'm eager for them to care about me and my family. Please show us where your priorities are. I hope they are for the people living here and their health and wellness. Let's have the right influence on future generations and show them we are ahead of the game not behind! Thank you.

Natasha

Sincerely,

Mrs. Natasha anderson

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Mr. Scott Bishop

To: Public Service Commission <psc@utah.gov>

Wed, Aug 19, 2015 at 12:30 PM

Commissioners:

Do NOT approve Rocky Mountain Power's "Integrated Resource Plan"!

It boils down to this: do you, as our commissioners, acknowledge that anthropogenic climate change is, in fact, a reality and growing exponentially worse? Do you accept that 97% of scientists are correct in that assessment? Do you concede that we can thus no longer continue to burn fossil fuels?

To put it bluntly: given the overwhelming empirical evidence that those scientists have gathered, to live in denial of global warming at this point is tantamount to still believing that the world is flat.

Ergo, we simply CANNOT continue to burn fossil fuels for our energy needs. Rocky Mountain Power has known this for decades, but has blithely continued, with your approval, to conduct "business as usual" with its dirty, coal-fired power plants —no matter the consequences to our air, water, land, health, state, nation, and planet. That the utility now wants to request "exemptions" from EPA regulations, so that it can spend \$1.3 billion to maintain its coal-fired plants, is unconscionable.

The only possible decision in this case is to deny Rocky Mountain Power's request, and admonish the utility to instead spend its \$1.3 billion to build wind, solar, hydro, and geothermal power plants, as well as battery storage facilities. Indeed, the commission should also deny Rocky Mountain Power's proposal in Docket 14-035-114 to levy a penalty surcharge on solar homeowners, since those customers are already taking the initiative, at their own expense, to help the utility clean up its dirty act.

I sincerely hope that the PUBLIC Services Commission will put its top priority on protecting the public —and NOT the services. Please do not disappoint Utah citizens by violating our trust.

Utah Public Service Commission

Dear Service Commission,

I approve of adding a huge amount of pollution to the already toxic air of Utah? Are you kidding? What are you all considering? You must be considering that most of Utah's are complacent sheeple who question nothing and follow blindly the leadership of Utah which realizes such a plan of adding another coal plant will support their policies of self-fulfilling prophecies of the end days, the latter days! I you think I am foolish enough to support or turn a blind eye (oh yeh, can't see through the inversion layers) to such a stupid idea. Well, I say, "Piss Off!", Not a chance we will allow this. After all the altruistic people need to look after the interest of the sheeple people of Utah and prevent such an implementation of such a selfish short-sighted plan.. This must be supported by the politicians of Utah who clearly do not represent the best interest of their constituents.

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Mrs. Vanessa Cato

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Aug 19, 2015

Utah Public Service Commission

Dear Service Commission,

Rocky Mountain Power's plan to rely on fossil fuel power long into the future is short-sighted and benefits only the company, not the consumers nor the other citizens of Utah and adjoining states. It is time for every power company including RMP to join the 21st century and move toward cleaner and renewable energy sources. Utah shows a shocking lack of concern for the current and future quality of its air. Please do not accept a plan from any power company that is stuck in a dinosaur mentality as well as power source.

Thank you for considering my comments.

Sincerely,
