I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Public Service Commission

Reuben Wolsey <reuben@voodoodreambuilders.com>

Fri, Aug 21, 2015 at 4:43 PM

To: psc@utah.gov

Hello,

In regards to the Integrated Resource Plan I have comments I want to share. I'm currently a Davis County resident and previously lived in Salt Lake and Utah Counties. Utah is my home. I want to say that I unequivocally reject any planning going forward that unnecessarily relies on coal, or other fossil fuel, extraction and burning for our power "needs". The sooner we phase out such unhealthy activities the better. And if it means sacrificing some of our convenience for awhile as we adapt to less toxic ways, I am, and forever will be, first in line.

I am actively pursuing solar options for my own home and business and as a matter of principle over profit, will do this no matter the cost in the next 3 years. In our great state wind harvest is also a powerful option. And perhaps even thermal venting if it is carefully planned and executed. It's no secret to anyone using their human senses without bias that burning fuels is unwise. To say otherwise is a clear measure of one's unwillingness to accept the peril that our unwillingness to change has brought us to. We may not all die tomorrow, but we aren't leaving a clean and strong legacy for our kids if we continue on the path we're on.

Another way of saying how I see our current circumstance is this: We're Utahns! I believe that is and should be a powerful declaration. I see our dirty and unhealthy power production methods as a challenge that we need to take great pride in overcoming NOW. No kicking the can down the road, or bowing to someone's profiteering. To be Utahn, and to be American to me, means facing the problem, getting our pride out of the way, and making our state a leader in cleaning our lands up and leading the way into a clean future that our kids aren't going to be asthmatic and weak in. Surely we have the brains and discipline to power our communities cleanly! Are we beneath that? Are we incapable? I need for us as sons and daughters of Utah to prove to ourselves that we are strong enough and have the wherewithal to make changes for the better.

A vote for coal use is a vote for weakness and inability to adapt. Maybe our earth can handle us burning it from the inside out for another two decades, or maybe it can't. I'm not going to contribute to us testing her limits. I'd rather be someone that in my gut sees the forest for the trees and stands up and admits I've got to do better than I have been. Some discomfort will do us some good. We'll be standing up straight and be stronger when we draw a line in the sand and put all the fuel burning behind us. We have the technology. Now do we have the courage to leave today's dirty energy wagon in the museum and get into the All American clean machine that will let us have a future? I believe we do. Prove to me, prove to all of us, that we will do right by ourselves, our children, and all the other creatures we share our lands with. And for many of us in Utah who are Christians, we must also look in the mirror and truly ask ourselves if how we power our lives honors that which was created by an almighty God. I for one, as I look at the scarred landscape and fill my nostrils with the foul air, know the answer is no.

In summation, the guiding principle is clean energy in closed loops. One and done extract and burn operations aren't the future, and the sooner they are gone the better. If someone is hanging onto an old profit model that promotes the further use of one and dones, they aren't seeing past the dollar bills and immediate comforts. Now is the time to adapt for the better. Sacrifice is okay, it'll make us stronger. The highest form of patriotism is innovation that protects our health and the future for our children.

Please please please take these words seriously. We have such an enormous opportunity to make a better way for ourselves. We must make haste. Most assuredly every burning step we take in a dirty energy direction worsens our problems. Let's be leaders.

Best Regards,

--
Reuben Wolsey

Aug 21, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Ms. Merilee Bishop

Reply-To: sstepanek@mindspring.com

To: psc@utah.gov

As a resident of Utah and a air breather I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants. It is widely known that Utah's mine-able coal resources are limited and investing to prolong the life of the existing fleet of coal burning facilities is short sighted from an energy diversity point of view, an economic development and air quality point as well.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. This approach is a serious threat to public health since coal mining is dangerous, coal power plants emit hazardous pollutants linked with higher rates of asthma and autism, and emit carbon dioxide that causes climate change. As regulations and treaties come into effect, there is a likelihood that the price of electricity generated by polluting power plants will increase. On the other hand, renewable energy sources mitigate many of these issues while still providing the economic benefits of affordable electricity.

I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. Aug 21, 2015

Utah Public Service Commission

Dear Service Commission,

The message below, though not drafted by me, expresses my strong believe that continuing to burn coal is a damaging, expensive, and unnecessary way to generate power. I live in deep southern Utah and in one of the most remote towns in the lower 48. And yet my air is often polluted by nearby 4 corners and Colorado-based coal-fired power plants. Please stop this misbegotten plan and require Rocky Mountain Power to show a 20 year plan to exit coal and shift to renewable power sources.

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. To Whom it May Concern:

I am appalled that Rocky Mountain Power's Integrated Resource Plan includes continuing investments into dirty coal with little effort to bring more solar and wind energy into the grid. I can barely open my eyes and am suffering from a chronic cough because of Utah's bad air, and despite public request for cleaner energy, you are continuing with the status quo.

This is reprehensible from a public agency.

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah reliant on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Ronni Egan <canyonrat15@gmail.com>

Fri, Aug 21, 2015 at 11:59 AM

To: pcc@utah.gov

As a resident of rural Utah, I am greatly concerned about air quality and future energy choices in the state. Utah should be vigorously pursuing alternative energy sources and moving away from coal and petroleum as quickly as possible. I am especially concerned about the proposed Alton coal mine expansion on to public lands, as there is a breeding population of endangered sage grouse right next door to the mine. Please limit fossil fuel expansion!

Thank you,

Veronica Egan

Please consider my input in your analysis of the long term direction for energy policy in the Intermountain West. As a component of the air quality and health status for a significant portion of the area population, the strategic decisions by PacifiCorp have a significant interest vested in the public. I for one support a strategy of reduced expansion and upgrade of existing coal-fired plants in favor of additional investment in alternative sources of energy - specifically solar, thermal, wind and conservation initiatives. Without capital investment encouraged by public policy the benefits of these resources to the environment and to economic development will be delayed by decades to the detriment of the region's health and welfare.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

I stand by all of this,

Isaac Thomas

I want to think that our leaders in Utah are intelligent enough to see that we need more renewable energy! Why are we not ahead of the game in how we supply power to everyone in the city! I am sick of not wanting to drive up to salt lake because of the horrible bad air. We are having more and more people move in and we are doing what it takes on the road to accommodate them, let's give them cleaner air and let's allow them to use energy in the most efficient and clean way we can! Big cities with bad pollution require clean energy sources. Let's be ahead of the game and join them!

The future of our power needs should not be tied to sources with extremely harmful pollution, but in clean renewable sources. Let's move towards advanced technology and away from primitive sources that pollute our air. Our generation needs to make the investment so that our children will have a chance to live in a healthy environment.

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Mrs. Vicky Davis

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

Aug 20, 2015

Utah Public Service Commission

Dear Service Commission,

PacifiCorp's 20-year plan is deeply flawed as it continues to rely heavily on fossil fuels and does not include a utility funded increase in renewable energy sources. I am very disappointed that PacifiCorp is planning to spend an estimated \$1 billion or more on pollution controls to prolong the life of over a dozen aging coal smokestacks, and keep Utah hooked on dirty and increasingly expensive coal-fired energy for many years. There are cleaner, safer, and less risky alternatives.

It is time for PacifiCorp to come clean and acknowledge the true cost of coal, including the economic costs of pollution controls and the human cost of public health and well-being. I do not want my energy dollars spent to prop up aging coal plants. I urge the Commission to critically evaluate PacifiCorp's long range plan and have them commit to an orderly and expeditious transition to clean energy, investing in the abundant and affordable renewable energy resources in Utah.

Sincerely,

Mr. Joshua Baresh

Gary Harding <garyh99@comcast.net>
Reply-To: garyh99@comcast.net
To: psc@utah.gov

Thu, Aug 20, 2015 at 6:47 PM

I'm concerned that PacifiCorp's latest resource plan would continue investments in aging coal plants over the next decade to prolong the lives of over a dozen such plants. The plan is too status quo focused. It ignores the realities of current technology advancements and does not react to the increasing environmental hazards caused by the power industry's massive use of hydrocarbon sources.

Our household already is investing in wind and solar sources and we would willingly pay more in return for dramatic reductions in coal fired electricity and the associated pollution.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and the associated coal based pollution in our air. Please insist that PacifiCorp come up with a new plan that exceeds federal guidelines for pollution reduction and phases out the use of coal.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.

Please reject PacifiCorp's preferred portfolio which tethers Utah's to coal for the next two decades and locks ratepayers into a billion dollars in coal costs. Instead, please demand that PacifiCorp come up with a new plan that takes advantage of our state's bountiful renewable resources and decreases our reliance on risky coal.

I'm writing to express my concern that PacifiCorp's latest resource plan would continue investments in aging coal plants, putting ratepayers on the hook for as much as 1.3 billion dollars over the next decade to prolong the lives of over a dozen coal plants.

There is widespread public support for investing in wind and solar. Wind is the cheapest form of electricity generation and utility scale solar projects are competitive with fossil fuels and becoming steadily cheaper each year.
