- Q. Please state your name, business address and present position with Rocky
 Mountain Power ("the Company"), a division of PacifiCorp.
- A. My name is K. Ian Andrews. My business address is 1407 West North Temple,
 Suite 310, Salt Lake City, UT 84116. I am the Director of Resource Development
 in the Resource Development and Construction department.

6 QUALIFICATIONS

7 Q. Briefly describe your educational and professional background.

I have a Bachelor of Science degree in chemical engineering from the University 8 A. 9 of Utah and a Masters degree in Business Administration from Brigham Young University. Since joining the Company in September 1978, I have had multiple 10 responsibilities including power plant training, project management, customer 11 12 technical services, resource planning, managing due diligence of resource acquisitions, power plant performance improvement, emissions controls strategy 13 development and implementation, electric power generation resource development 14 and most recently, director of the resource development group since October 2013. 15 I am a registered professional engineer in the state of Utah. I also represent the 16 17 Company on a number of issues related to energy.

18 Q. What are your responsibilities as Director of Resource Development?

A. My primary responsibilities include developing Company-owned generation
 resource options that the Company could potentially implement, if those resources
 are determined to be least cost on a risk-adjusted basis. The group is responsible
 for developing and providing performance and cost information related to future
 resource options used in the Company's integrated resource planning process and

24 maintains data on existing resource capacities and performance. The resource development group also provides cost and performance information on current and 25 emerging environmental regulations that may affect the operation of the 26 Company's thermal generating assets. 27

PURPOSE OF TESTIMONY 28

What is the purpose of your testimony in this proceeding? 29 **Q**.

A. My testimony supports the Company's proposed Clean Coal Technology Program 30 described in the Application, and included as Exhibit B thereto. The Company's 31 32 filing respectfully requests the Commission approve the Clean Coal Technology Program projects pursuant to U.C.A. § 54-20-104; these proposed projects have 33 been selected to meet the objectives of the Sustainable Transportation and Energy 34 35 Plan Act ("STEP") "to investigate, analyze, and research clean coal technology"

(U.C.A. § Section 54-20-104). 36

37

CLEAN COAL TECHNOLOGY PROGRAM

Please describe the Company's proposed Clean Coal Technology Program. 38 **O**.

- Pursuant to the STEP legislation, the Company is requesting authorization to spend A. 39 up to \$5.0 million in STEP funding over the five-year pilot period to investigate, 40 analyze, and research clean coal technology. The program consists of the following 41 proposed projects: 42
- 1) A co-firing test of processed woody-waste (biomass) materials at the 43 Company's Hunter Unit 3. 44
- 2) Co-funding of a long term availability test of Sustainable Energy Solutions' 45 Cryogenic Carbon CaptureTM technology on one of the units at either the Hunter 46

47	or Huntington Plants.
----	-----------------------

48	3) Co-funding of the University of Utah Phase 1 effort to perform a pre-feasibility
49	study for commercial carbon dioxide ("CO2") sequestration sites with co-
50	funding by the United States Department of Energy.
51	4) A study to evaluate the potential for using CO_2 to be used for regional enhanced
52	coal bed methane recovery with sequestration.
53	5) A study to evaluate the performance and cost effectiveness of integrating solar
54	thermal capture technologies at Hunter 3.
55	6) The application of an advanced neural network control system at Huntington
56	Unit 2 for the reduction of nitrogen oxides ("NO _X ") emissions.
57	7) Implementation of a utility scale demonstration of one or more alternative
58	technologies that may result in decreases in NO_X emissions without the use of
59	Selective Catalytic Reduction ("SCR").
59 60	Selective Catalytic Reduction ("SCR"). A full description of the program is provided in the Clean Coal Technology
60	A full description of the program is provided in the Clean Coal Technology
60 61	A full description of the program is provided in the Clean Coal Technology Program document included as Exhibit B to the Application.
60 61 62	A full description of the program is provided in the Clean Coal Technology Program document included as Exhibit B to the Application. For implementation of this program, the Company has assembled a Clean

70

Q. What kind of benefits will the program provide?

A. The respective components of the Clean Coal Technology program will provide thefollowing benefits:

- 1) Opportunity to assess the feasibility of potential periodic removal of Utah's woody waste that will help the Utah forest health and potentially decrease wild fires and their associated particulate emissions. This testing would be performed on woody waste materials that have processed using technologies developed by two Utah based companies, Amaron Energy and AEG Coalswitch.
- 2) Provide for a long term availability test of Sustainable Energy Solutions' 79 Cryogenic Carbon CaptureTM technology on one of the units at the Hunter or 80 81 Huntington Plants. This test is viewed as a next step to facilitate United States Department of Energy ("USDOE") funding to design, construct, install and test 82 pilot scale (5-10 MWe) facility. This technology is considered to be an 83 84 emerging technology with lower costs and auxiliary loads than currently available commercial carbon capture technologies. Sustainable Energy 85 86 Solutions is a Utah-based company.
- 3) Opportunity to conduct a pre-feasibility study for a commercial scale CO₂
 geological storage complex in Emery County while leveraging \$1.2m of
 USDOE funding. Other participants include a number of Utah state agencies
 including Utah Science Technology and Research initiative, Utah Division of
 Environmental Quality, the Office of Energy Development, the Utah Division
 of Oil, Gas and Mining, the Utah Geological Survey and the State Institutional

94	4)	Investigate the potential ability to use captured CO ₂ from Emery County coal-
95		fueled power plants for use in enhanced coal bed methane recovery.

- 96 5) Evaluate the potential to install solar thermal augmentation to produce steam or
 97 hot water at a Utah coal plant location thereby reducing emissions associated
 98 with coal fueled power generation.
- 6) Facilitate the implementation of a neural net software application using the
 direct involvement of a Utah university to reduce NOx emissions at Huntington
 Unit 2.
- Facilitate future potential targeted NO_X emissions reductions solutions that may
 be more economical than installing selective catalytic reduction system.

104 CONCLUSION

105 Q. Please summarize the proposal for Clean Coal Technology Program contained 106 in this Application.

107 A. The Company has identified seven clean coal research studies and projects with associated budgets. These projects and studies were reviewed and prioritized by 108 109 the Clean Coal Research team during the development and research identification phase. These selected projects meet the definition of Clean Coal technology in 110 STEP and its objective "to investigate, analyze, and research clean coal 111 technology" (U.C.A. § Section 54-20-104). The benefits of each project are 112 identified in the individual project descriptions in Exhibit B, Clean Coal 113 Technology Program. The selected projects are intended to meet multiple 114 115 objectives, and include:

116		1)	Demonstration projects that will result in measurable reduced emissions,	
117		2)	Investment in promising technologies and applications that may advance	
118			technologies that when fully developed and applied in utility scale that will	
119			allow for coal-fired generation resources to operate with reduced carbon	
120			emissions,	
121		3)	Providing opportunities for industry-targeted areas of research that can be	
122			performed by Utah's universities, and	
123		4)	Promotion of Utah's clean energy technology companies.	
124	Q.	In yo	In your opinion, is the Company's proposal consistent with STEP and in the	
125		inter	est of Rocky Mountain Power's customers?	
126	А.	Yes.		
127	Q.	Does this conclude your direct testimony?		
128	A.	Yes.
