Hi. I am writing this email to voice my concerns with Rocky Mountain power doing away with net metering for solar powered homes.

There is no reason for us as humans to ignore the facts the climate change is a haunting reality. Renewable resources for our energy consumption is the only ethical and moral way for our future.

I hope that you consider this decision with more than your pocket books.

Thank you.

Tue, Nov 22, 2016 at 4:21 PM

Dear Commissioners,

The Rocky Mountain Power residential solar energy plan should be VERY CAREFULLY investigated. It is obviously promoted and funded by big oil/coal fuel to squash the movement by the enlightened power users to reduce the use of carbon based fuels. These people have used their own money (with some subsidies) with a very long pay back in order to reduce our ever increasing air pollution. As regulators, you breath the same air as I do and should consider what this move by RMP is doing to the air that you and your children are breathing. Do the right thing and deny this request by RMP and instead encourage the expansion of residential solar.

Jim Rooney, Retired Chemical Engineer.

Tue, Nov 22, 2016 at 4:21 PM

To: PSC@utah.gov

To whom it may concern:

From what I have read and seen so far passing this proposal by Rocky Mountain Power would be one of the biggest steps backwards Utah could make. I feel like it is being rushed by Rocky Mountain Power to make a decision by December 9th because they want to eliminate their competition. We all have freedom of choice, why shouldn't we have the freedom to choose how to obtain our power!? I ask that the Public Service Commission do what it's meant to do and protect the public from the Rocky Mountain Power monopoly and remove the December 9th deadline, thousands of jobs are on the line!

**Howard Sorensen** <howard@sorenseninsurance.com>

Tue, Nov 22, 2016 at 4:24 PM

To: psc@utah.gov

Dear Commissioners,

I am very concerned that Rocky Mt. Power is requesting such a heavy tariff on customers with solar panels, especially at a time when air quality in Utah is such a great concern. It is also unreasonable that they are attempting to bypass the normal rate changing process, and trying to pass this in a hurry during the holidays.

Solar can be a great benefit to the residents of Utah both in promoting clean energy and reducing pollution.

Please do not let Rocky Mt. Power proceed with this increase to customers.

Sincerely,

Howard N. Sorensen  
Oakley, Utah

Tue, Nov 22, 2016 at 4:24 PM

To: psc@utah.gov

Dear Commissioners,

I am strongly opposed to PacifiCorp-RMP's "Advice No. 16-13" filed Nov 9th 2016. This is a limitation of the rights and freedoms of the public. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th. This will prevent new solar customers from affordably obtaining electricity. Further strengthening the grip that the oil industry has on our society. This will limit our progress as a country and as a society.

Thank you for accepting public input, although the deadline should be extended. I respectfully and strongly urge you to reject PacifiCorp-RMP's current rate change request.

**Joseph Silotti** <hottysilotti@gmail.com>

Tue, Nov 22, 2016 at 4:25 PM

To: psc@utah.gov

Dear Commissioners,

I want you to know that I oppose the request that PacifiCorp-RMP has made for the rate increase on solar systems and would ask you to **suspend the tariff from taking effect on 12/9/2016**. Rocky Mountain Power should be required to use the normal rate-making process, and time should be given for public opinion to be heard.

It is unethical that a monopolized industry that our power system, should be able to make such rapid and hidden changes. I agree that a change will need to be made, but doing so in this manner should not be allowed and I'd ask you to please refuse this from moving forward.

I personally am waiting for a solar system to be installed, but will be forced to cancel that installation if this rate increase happens as it is currently written.

Thank you for accepting my input. Please in the interest of all of those in Utah, please reject the proposed rate change.

Thanks,

Tue, Nov 22, 2016 at 3:58 PM

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I would urge the commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. I would further urge the commission to require RMP to use the normal rate-making process for its proposed changes.

I am a solar customer and am not opposed to a fair and equitable solution that would result in customers being able to see a return on investment from a solar investment and RMP being able to have a sustainable business model moving forward. I believe this solution will come as a result of compromise and looking at all the facts, most likely gained through an unbiased 3rd-party study (with a sample size that yields an acceptable confidence level), and uncovering the full costs and benefits of roof-top solar. What RMP has undertaken in their study over the last year is far from unbiased and their timeline on this proposal does not show a sliver of compromise.

The studies that I have read have shown a net benefit of solar to grid every time. I want to pay my fair share, but I am opposed to having solar customers pay what is essentially a penalty to patch a hole in RMP's business model.

I would like to thank the PSC for allowing and accepting public comments, but I would urge you to consider extending the deadline to allow more of the average rate payers voice's to be heard.

In closing, please reject PacifiCorp-RMP's current rate change request.

Thank you,

**Shauna Mertz** <smertz@solcius.com>

Tue, Nov 22, 2016 at 2:59 PM

To: psc@utah.gov

Hearing about the Rocky Mountain proposal is quite disturbing on many levels - What Rocky Mountain is trying to do will be:

- Creating a lack of competition in the power industry
- Imposing severe restrictions on Solar Companies
- Ignoring efforts to improve Utah air quality

These three issues would make most Utah residents upset if they knew what was going on. No power company should become so large that they have a monopoly on the industry. What they are proposing will totally squash the Solar industry.

Utah boasts of being friendly to business and entrepreneurs, but increasing the costs like Rocky Mountain has proposed to solar customers would cause many individual to lose their jobs as Solar Companies will fold, and as a result Utah residents will never have the option to consider doing the environmentally right thing by going Solar.

Please consider all the issues when coming to a decision about this issue. It will have an impact on the great State of Utah for many years to come. Aren't we supposed to be good stewards of our environment? I hope that my concerns are taken into consideration.

Concerned,

Shauna Mertz

Commissioners,

I understand that Rocky Mountain Power has filed for a rate change regarding to solar customers. If the goal is to replace some of our energy use to renewable energy this rate change would be the largest demotivater to homeowners adding solar as a supplement in power usage. Despite the justification for this rate increase provided by Rocky Mountain Power the ultimate result is to greatly reduce new solar investment in Utah. It will kill the industry, and it is unfair to those who have made an investment to have the rules change in the middle of the game. I ask you to reject the current proposal. The rate structure is not broken and does not need to be changed.

Thank You,

## Reject RMP's proposal

1 message

---

**Jason Harman** <harmanjb@gmail.com>

Tue, Nov 22, 2016 at 3:01 PM

To: psc@utah.gov

Please please please! Do not make the same mistake that Nevada did. If this proposal is passed it will shut solar down in Utah and will directly affect my job and the 100 people that I oversee. Solar is my lively hood and the way that I keep food on the table for my family.

Rocky Mountain Power's bill is excessive and ludicrous. Out of all of the Utilities throughout the nation why is it that RMP is the utility to to impose the most outrageous proposal? I feel the implication study that they were suppose to perform has not been adequately done. Solar is a good thing for the consumer. It gives freedom to choose. RMP's only desire is to protect their pocket book and to stomp all competition.

Please reject this proposal.

To: psc@utah.gov

Tue, Nov 22, 2016 at 3:02 PM

Dear Commissioners,

I feel it's my obligation as a citizen and solar producer/user of this state to address Rocky Mountain Power's recent rate increase proposal that is before you. As a long time advocate and supporter of green energy in my neighborhood, community and with those whom I rub shoulders with on a daily basis, I'm discouraged to see another instance of this monopoly pulling no punches in trying to maintain its status as the chief and only provider of electrical power to the citizens of this state. Yes they say all the right things to let us believe they are for green energy but only if it doesn't affect their bottom dollar and they can maintain their profit margins by really being a wolf in sheep's clothing.

It is time the leaders of this state think outside the box and demand the business model that has worked for decades for this utility be reworked and revamped. If they are really there to serve us and expect to be permitted to keep being the monopoly that they are then they need to change the "business as usual" model they are fighting to the death to maintain and evolve into one that truly serves our communities by being a facilitator of energy exchange that we as citizens are contributing to.

Rocky Mountain Power obviously feels very threatened by the citizenry taking control of this god given energy source that we can now tap in to and wishes to squash it before it turns their existence upside down much like Mt Bell telephone was turned upside down a decade or so ago because they all but refused to change with the times.

If their only real solution is to penalize those of us who have invested many \$\$ or looking to invest into this technology by doing what we can to help save our environment in order to save their own necks then they are not the forward thinking energy company they need to be to lead us into the next century.

We need people both in energy generation/distribution and the government who can look at what the possibilities are and do everything they can to promote this new technology to both the benefit and well being of our citizenry and environment instead of all but demanding they be the only provider of energy. Yes they are also now installing solar farms as we are demanding a change and they are doing so to placate the citizenry and governments. Typically they only change if it benefits their bottom line or government demands it, this is one of those times.

The model is broken and there needs to be forward thinking people who are brave and bold enough to say this needs to change and let's find a better way to do this. Business as usual no longer serves our citizenry, communities or environment and the power of the people to help in this evolution should not be underestimated, all we need is the right utility to help in this evolution not one who wants to stifle it as it is just taking off.

Please think and act very carefully as we, our children and our rights as citizens and custodians of this planet should be your first thought as you are tempted to acquiesce to the demands of a utility who is fighting a new model of distributed energy. We as citizens are rightfully demanding a say and a part in that new model all the while they are fighting tooth and nail to put an end to it now they see it threatening their existence.

I trust as a citizen who was born and has lived in this valley for over 61 years now, you will be a partner to change that will primarily benefit us as residents of this great state and our posterity and allow us the freedom dictate how and where we will receive our energy. Please allow this new technology that we as citizens have led the way in implementing to flourish so that we can say in another decade or two we did make a difference, our lives are better, we are in control of our lives and each of us are more self reliant and doing our part to make this valley and state a better place.

Lastly, as a LDS Missionary in Switzerland back in the early to mid 70's, I saw firsthand the problems facing Zermatt Switzerland that is also a city in a valley with the smog problems that kept many from viewing the Matterhorn on most days. In 2013 I returned to that valley and was very happy to see the transformation of the city and air due to the government allowing only electrically driven modes of transport to proceed up the valley prohibiting fossil fuel modes to invade their valley.

We can make a difference, but this utility needs to change in order to keep being a player, we can't let ourselves become a hostage to their demands.

**Stacey Nielsen** <Stacey.Nielsen@urs.org>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:02 PM

Dear Commissioners,

I am a recent solar power customer. Over the last 20 years, my power bill has continued to increase and the power company just continues to send me "bully" letters every month on how I am worse than everyone in the neighborhood. I know there was something wrong with my meter because my small family of 3 was always worse than EVERYONE in the neighborhood.

I invested a lot of time, research and money into getting solar panels based on the fact they would 1) preserve the environment for future generations and 2) save me money in the long run.

This new proposal by RMP goes against all things – it is one company trying to get rich and sock it to the consumer however they can! RMP is a monopoly that no longer serves the people – but controls them. I have called and asked for help on what I am doing to cause such an excessive use and they say they just don't know.

Since getting solar panels, miraculously my power usage is down.

RMP is already getting the use of my power at a discounted rate – and they get to take away all my credits at a point when I really need or could benefit from them. Now, as a final slap in the face, they want to charge me extra for my choice to go solar and save the environment and my pocketbook!

The government has asked that its citizens find ways to reduce their footprint on society and we shouldn't now or in the future be punished for it. RMP needs to have their hands slapped for being "greedy bullies" and leave current and future solar power people alone! Per their request, they are stating they will "grandfather" current participants, but they have said many things in the past that they then change when someone wants a better bonus or a bigger boat!

Please stand up for me against RMP and REJECT their proposal for rate increases due to solar use!

Thank you

Stacey M Nielsen

## Rate Structure Change Solar

1 message

---

**Doug Bohner** <dkb@spectrum-engineers.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:02 PM

Dear Commissioners,

I am confused and strongly opposed to PacifiCorp-RMPs "Advice No. 16-13" which was requested. This would change the rate structure for rooftop solar customers and I urge you to deny Rocky Mountain Power (RMP)'s request for a fast track. This is too important of an issue to avoid the normal rate-making process for proposed changes. The confusion is that this is so wrong, where Utah wants to be seen as a leader in energy issues, why has this gotten so far?

I am an engineer working for Spectrum Engineers. I have been involved in the local engineering community for thirty years with all types of mechanical, electrical, controls and energy saving building designs. Our office is in downtown Salt Lake City. I am very concerned with the air quality in the valley and how this affects our employees and their families health and quality of life. We also have serious issues attracting employees from out of state due to the states reputation for un-sustainable and anti-green environmental practices. By implementing RPM's proposed changes, this will increase the costs for new rooftop solar customers, and infringe on innovation and change that would benefit the entire state, and absolutely here locally in this location of inversion and pollution.

Thank you for accepting public input, although there was certainly little time for it. I am requesting the PSC, in the interest of ratepayers, and all of Utah's public, reject PacifiCorp-RPM's current rate change request.

Best regards,

**Douglas K. Bohner, P.E.**

**Gabriel Niculescu** <niculescu@rqn.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:03 PM

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. I would support requiring Rocky Mountain Power to use the normal rate-making process for its proposed changes.

I feel that we should continue with current policies that allow alternative forms of energy to grow within our State. Constantly tinkering with rules, regulations, and cost structures decreases stability that businesses, consumers and homeowners rely on to plan for their power needs. Changing the rate structure at this time would have unintended consequences and destabilize the plans of businesses and homeowners to adopt and support clean and reliable alternative energy to our State's power grid.

Thank you for your consideration.

Respectfully,

Gabriel Niculescu

To: PSC@utah.gov

Tue, Nov 22, 2016 at 3:03 PM

Dear Utah Public Service Commission,

I am a very concerned citizen. Please do not allow Rocky Mountain Power to hike the rates on net-metering for solar customers. This hike will make investing in solar energy a bad investment for the average homeowner that wants to do their part in cutting the use of fossil fuels for energy production. Especially at a time when the president-elect and members of Congress are denying climate change and threatening to renege on worldwide agreements, Utah must take a stand on protecting and encouraging the alternative energy industry and doing everything in our power to clean up our air.

Thank you for all the work you do and for listening to public input.

Sincerely,  
Janet Jamison

Tue, Nov 22, 2016 at 3:05 PM

Dear Commissioners,

Good afternoon. I wanted to quickly write to you and express my strong opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I would urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. I further urge you to require RMP to use the normal rate-making process for its proposed changes. I don't understand why we establish processes for actions like this tariff and then allow certain requests to circumvent the procedures.

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. If we want Utah to become a better "clean-energy" state, then we need to provide a financial model that will incentivize residential customers to invest in rood-top solar systems. This proposed rate increase would personally impact my decision to install solar panels. And the proposed rate increase would be a crushing blow to our environment and the opportunity to develop more clean energy.

I want to thank you for accepting public input, and I would like to request that the deadline be extended. Once more, I implore you to please reject PacifiCorp-RMP's current rate change request.

Sincerely,

Craig Lawson

**CenturyLink Customer** <ronandshari@q.com>

Tue, Nov 22, 2016 at 3:09 PM

To: psc@utah.gov

Dear Commissioners,

We are stating our opposition to PacifiCorp-RMP's "Advice No. 16-13 that would change the rate structure for rooftop solar customer. We urge to suspend the tarriff and not let it take effect on December 9th as proposed by Rocky Mountain Power. We ask that Rocky Mountain Power (RMP) be required to use the normal rate-making process for its proposed changes.

We do not feel RMP should be allowed to unreasonably raise the cost for rooftop solar customers, restrict free trade, or limit access to clean and efficient energy. We are rooftop solar customers and RMP currently is using all the excess power we produce for other RMP customers, charging them for power we produce. We receive a kilowatt credit for excess power we produce, however in March of each year RMP reduces any credits to zero, thus taking the power we produce for their use without any reimbursement to us. Essentially receiving our excess power for free, but charging other customers for the free power RMP is receiving. This does not encourage the use of clean power, which is greatly needed in our area where pollution is trapped in the valley due to temperature inversions. RMP should be encouraging the use of clean solar power instead of trying to restrict its use by charging fees for those who wish to have solar panels and want to help in maintaining a clean environment.

We also feel RMP is using a double standard in how they advertise for solar energy, subsidize customers to help them receive solar energy and then turn around and penalize the customers for generating our own energy. Everyday on commercials on TV or in newspaper articles we are told about RMP helping a customer, such as Weber State University, the Loveland Living Planet Aquarium, the Vivint Smartphone Arena and several others. These companies have all benefited from RMP benefits in reducing their cost for their systems. RMP also has invested in it's own solar energy field and allow RMP customers to opt into the solar field for their personal consumption. Now they want to penalize all customers for trying to improve our own energy production and decrease our foot print on our environment. As we say, a double standard being created by Rocky Mountain Power.

We thank you for accepting public input, though the deadline should be extended to hear from additional customers. In the interest of RMP's ratepayers, we respectfully request the PSC Commissioners reject PacifiCorp-RMP's current rate change request.

## Reject RMP Proposal

1 message

---

**Victor Mendoza** <vmendoza@solcius.com>

Tue, Nov 22, 2016 at 3:10 PM

To: psc@utah.gov

I am writing to express my concern with Docket 16-035-T14, and the impact it will have on local businesses and consumers. The Dec 9<sup>th</sup> proposed rate change will halt solar activity and sales, especially since a decision will not be made until the August timeframe, 136. As of Dec 10<sup>th</sup> a consumer will now be subject to any as changes described in 135A and will NOT be confident in making a solar investment. RMP's power and position with this docket creates consumer anxiety. For instance, line 225 states that current NEMs will be honored based on homeowner investments. But as of 12/10 that same commitment will not be honored. For the public service, I kindly ask that 135A not move forward and allow consumers to make a sound financial decision.

Thanks

**Steven Carver** <steven.carver@gmail.com>

Tue, Nov 22, 2016 at 3:08 PM

To: psc@utah.gov

Dear Commissioners,

I concerned about Rocky Mountain Power's sudden concern with fairness, specifically that each customer should pay their share of the cost to serve them. This concept would directly impact the rural customers in our state because of the extensive distribution network needed to serve areas with low population density. I grew up on a farm in Weber County, about 45 years ago we installed an electric furnace to become a total electric household, as heavily promoted by the power company. This required the power company to upgrade the transformer serving our home, and install voltage regulators in a nearby town because everyone's lights dimmed when our furnace came on. If we had been required to pay those additional costs we would have had to remain on oil heat. I currently live in a 40 year old home, however my area has underground power distribution which I understand has higher costs that above ground, but I don't believe that the additional safety and reliability should be an additional charge. I believe that all residential users should continue to share distribution costs equally.

I would like to raise a red flag on the proposed \$9.02 per kilowatt for peak period demand charge. Since solar systems in general produce peak output during summer afternoons, this should be reducing the utilities need to buy peaking power and this should be reflected in lower, not higher bills for solar customers. This would also seem to call into question the Subscriber Solar program if solar generation is such a problem child.

Thanks,

To: psc@utah.gov

Dear commissioners:

I wanted to voice my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I would like to urge you, the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require RMP to use the normal rate-making process for its proposed changes.

Thanks you for your time,

- Cassandra Alldredge

## Docket #16-035-T14 Public Comment

1 message

---

**Brian Smith** <b.smith@teraflex.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:10 PM

Dear Commissioners,

Please vote NO on the above mentioned docket item.

As a rooftop solar owner, I am abjectly opposed to the rate increase proposed by Rocky Mountain Power, Advice No. 16-13 filed November 9, 2016. I feel that not only is this unfair that Rocky Mountain Power is trying to skirt the normal rate-making process, they are trying to push this decision making process through when most people are distracted with the holidays. They tried this earlier this year in a bill that failed this year in the State Legislature. Only after they removed the language regarding solar was that bill able to pass. This shows the intent of the State Legislature is not to allow passage of this completely unfair change to how solar owners are treated.

As a business person, business decisions are based on the economic value of a project. As a home owner, I use a similar process. Changing the facts substantially after the decision process has been made is extremely unfair. The proposed changes would significantly lengthen the payback period. Not just a little bit, but by multiples in terms of years. If people like me who have purchased systems based on projections of how much these systems would cost are forced to not only pay for the systems but higher than anticipated unforeseen costs, this will arbitrarily the spending power of my hard earned money. May I also remind you that I already have to pay Rocky Mountain Power a monthly fee even if my system produces more than I use. I cannot use credits built up to offset this monthly fee.

The benefits of owning solar panel are not just for the owners of the systems; everyone gets to benefit from the cleaner environment. We all get to benefit from the income taxes paid by the solar companies in the state along with the income taxes from those employees. Passing this rate increase will have a significant impact on solar companies that are contributing to our local economy. It may kill the industry has it has in Nevada.

On another note, as business manager, our company invested over \$600,000 in a new solar system for our property. Our intent is to bring more of our manufacturing back to the state of Utah. We have made a substantial investment in machinery powered by our solar panels. Increasing our power bill will definitely slow down the process of moving production back and in some instances make it so that it is not economical to move it back to Utah.

Electric companies are monopolies by design. Inherently there is no choice. Solar power generation allows consumers to have a choice. If this choice is taken away because Rocky Mountain Power kills this industry it will be unfair to all consumers. Rocky Mountain Power knows the value of solar generation. If this choice is taken away, customers who are sensitive to the environment will have little choice other than to subscribe to Rocky Mountain Powers Solar Project. Their product allows consumers who sign up to lock in rates for decades. My intent was to do the same thing yet Rocky Mountain Power wants to punish me because I did not use their system.

Finally, as mentioned above, the timing of this proposal and lack of use of other established channels only benefits Rocky Mountain Power. If nothing I have said above convinces you to say no, at least slow down the process and force Rocky Mountain to use the established procedures and get more input from those who are impacted by this decision. It would also be nice if they had to go before the State Legislature again before attempting to make such drastic changes.

I do wish to thank you for considering my comments that have been submitted before the deadline. As stated in the opening line of this email. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

I can be contacted at 4331 West Courtney Ct, West Jordan, UT, 84088. At the email address above or [basmith@oasisbb.net](mailto:basmith@oasisbb.net). My phone is [801-946-0290](tel:801-946-0290). I will be glad to clarify or provide additional information.

## Docket #16-035-T14 Public Comment

1 message

---

**Brandon Woolsey** <unhollyram@gmail.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:10 PM

Dear Commissioners,

I would like to voice my opposition to PacificCorps recent rake hit increase on rooftop solar customers. Please suspend the tariff requested and instead make Rocky Mountain Power, instead go through the normal rate making procedure.

Raising the rates on new solar customers as Rocky Mountain wants to do will effectively kill off the rooftop solar market in the state. For further proof of this one only needs to look at recent regulations in Nevada that were devastating to solar companies in the State where within 12 months, rooftop solar applications dropped by 99%.

By eliminating the rooftop solar marketplace in the state, this would allow Rocky Mountain Power to take advantage of its monopoly by eliminating consumer choice, energy independence and a consumer's ability to do what they wish on their roof tops.

Rocky Mountain Power's study also only takes into account the cost of service for solar customers, rather than conducting a cost/benefit analysis that examines not only the cost, but the benefits provided by solar customers to both the utility and non-solar customers.

The proposal by Rocky Mountain Power is the most aggressive, anti-consumer, anti-competitive and anti-solar proposal ever made by a utility in the United States. It would be bad for business and will kill thousands of solar jobs in Utah. It also unfairly punishes consumers who are trying to save money by using less power

The goal of Rocky Mountain Power shouldn't be to kill off a renewable energy platform, and to punish those who are trying to decrease their energy consumption. Instead, they should be looking for ways to assist in these goals. If Rocky Mountain power is worried that the rate of rooftop solar customers is low because too many people cannot afford them, which is what they say is causing the extra cost, the goal is to make Solar easier to be adapted wide scale. If more and more people have solar, than the gap that RMP refers to will be gone.

Rocky Mountain also states that customers will still save a fraction of their electrical bill with Solar rooftop panels, but they are not taking into account the initial cost of startup. Decreasing a power bill by 30% does not justify the cost of a Solar system that costs between 15k-20k to setup.

Thank you for accepting public input, although your deadline for comments should be accepted. I also respectfully ask that the commission, in the best interests of ratepayers, and the Utah public, reject PacificCorps current rate change request.

## Docket #16-035-T14 Public Comment

1 message

---

**Jim Haslam** <jim@jimhaslam.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:11 PM

Dear Commissioners,

I am very concerned about the action being taken by Rocky Mountain Power, who are in essence a monopoly for electrical power here in Utah. As you know, they are proposing a three tier rate hike with the Public Service Commission (Docket #16-035-T14) that would unfairly raise the fees for solar power net-metering without proper vetting and analysis. I feel that they are also purposely trying to pass this rate hike unfairly and under the table, by not adequately informing the public of their opportunity to make comment, also the fact of having a quick due date for public comment and having it slated due on the Thanksgiving Holiday week all makes this seem like an attempt to further discourage any public comment. This all seems very unfair and underhanded to me, so I am asking The PSC to stand up for clean solar energy and clean air in Utah by allowing rooftop solar to remain an affordable option for those who would like an electrical power option in Utah.

As you well know, If approved, RMP's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production. RMP wants permission to change the rooftop solar rate structure, effective next month, without having to go through the normal rate-setting process. I agree that changes might be needed to our current rates, but this is unfair and a more robust conversation should take place to best determine the benefits of rooftop solar in Utah. It is important for the Public Service Commission to look at the benefits of rooftop solar and not just the costs, as it has been done in many other states.

Thank you for your attention to this important matter, and I thank you for accepting public input, although I feel that the deadline really should have been made more publicly known, and it should be extended beyond the Thanksgiving week.

As a fellow Utahan who is concerned about our great States environment, I ask you to please reject the PacifiCorp-RMP's current rate change request.

Respectfully,

Tue, Nov 22, 2016 at 3:12 PM

Dear Commissioner,

I would like to oppose PaciCorps-RMPs Advice 16-13 filed Nov 9.2016 that would change the structure for rooftop solar customers. I particularly urge that the Public Service Commission "not approve" the rate increase on December 9th.

This filing has come about in a time frame that does not allow many people to respond to this issue, due to the Thanksgiving Holiday. And do think Rocky Mountains timing of this proposal is well conceived on their part, to in fact, not to allow for public input. I find that outrageous. These kind of proposals are conceived only to bolster their bottom line. Solar power should continue to be encouraged to provide clean and efficient energy to all customers of Rocky Mountain Power thru their Net Metering route. I feel strongly that these rate increases are detrimental for the US's need to encourage clean power so we can wean ourselves from such strong carbon imprints, that may impact our world environment in the future. Many studies from other countries have shown that roof top solar has added value the the power system and the grid.

I want to thank you for accepting public input, and respectfully request the PSC, in the interests of the rate payers and the the Utah public to reject PacifiCorp-RMP current rate change request.

Thank you

Bart Reuling

Tue, Nov 22, 2016 at 3:13 PM

Dear Commissioners,

I strongly oppose PacifiCorp-RMP's Advice No. 16-13, filed Nov. 9, 2016 that would change the rate structure for rooftop solar customers and urge the public service commission to reject the proposal.

I oppose this for four reasons: jobs, Health, lack of unbiased research, and rate fairness.

First, jobs, we only need to look to neighboring Nevada to see how this type of rate structure will hurt the Utah economy. When a similar rate structure was introduced in Nevada, the industry there suffered severely. Utah considers itself a business friendly place, which seems at odds with adopting this proposal.

Second, health, Utah's air quality is horrendous, especially in the winter time. I don't want to suffer the long term consequences of breathing the bad air and I don't want my children to suffer these consequences either. Therefor the commission should do all they can to promote rooftop solar to reduce the pollutants in the Utah air.

Third, lack of unbiased research, RMP cites to research that they conducted to show the cost of solar to other rate payers. These type of self serving research should not be allowed. At the bare minimum they should have to hire an unbiased outside entity to conduct this research. The commission should also consider other research that has shown that monopoly utilities consistently overestimate the cost of rooftop solar on the power infrastructure and consistently under estimated the benefits of rooftop solar.

Fourth, rate fairness, it seems categorical unfair to charge a different rate to solar customers than is charged to general rate paying customers. RMP has not shown a good reason that there should be a different rate for different customers. This sounds like a "tax" for solar customers.

Thank you for accepting public comments and for taking the time to consider my opinion. I once again urge the commission to reject the proposal.

Ben Smith

Tue, Nov 22, 2016 at 3:15 PM

Dear Commissioners:

Thank you for listening to my voice regarding the RMP proposed solar tariff.

It is my understanding RMP is not allowed to request a new tariff except when presenting it in a general rate hearing. I hope all regulations are being followed. In addition, KW peak demand charge is applied to Industry, not individuals.

Nevertheless, below please find calculations using my actual PV production and my actual RMP grid usage. Note that even if I concede that my PV overproduction has no value (which I don't), RMP's proposed tariff will cost me more than my actual use of grid resources.

Thank you,

Nia Z Sherar

801 487 9380

SOLAR BY THE NUMBERS	KWH	Cost
I produce 460kw per month (avg) from my PV system.		
<b>Let's say I concede (which I don't ) the value of what I overproduce is worth \$0</b>		
Total kwh consumption pre month (avg)	302	(\$36)
Provided directly by my PV	43	\$5
My monthly bill from RMP for my actual use of RMP grid resources would be:	259	(\$31)
<b>However, I produce an average of 460kw a month</b>		
(multiplier of \$.113 per kwh, Solar Subscriber pgm)	417	\$47
<b>My monthly loss - the difference of what I give to RMP and what I owe:</b>		<b>\$16</b>
<b>Estimated bill if RMP tariff approved</b>		
Multiplier of \$.0381 per kwh, RMP tariff	259	\$10
Avg 3KW demand charge		\$27

(as per Utah Clean Energy/ as per RMP tariff)		
RMP tariff base fees		<u>\$18</u>
<b>What I will be paying monthly under the proposed RMP tariff:</b>		<b>\$55</b>
<b>My monthly loss given the value of what I contribute to RMP vs what I pay RMP:</b>		<b>\$71</b>

**Rick Tolman** <srtolman@gmail.com>

Tue, Nov 22, 2016 at 3:17 PM

To: psc@utah.gov

Dear Commissioners: I have just found out about the proposal for a rate change by Rocky Mountain Power with respect to solar and net metering. I strongly oppose this proposal and urge you to fully reject it. I urge you to suspend the tariff and not let it take effect on 12/9. RMP should use the normal rate-making process for its proposed changes.

This proposal by RMP is another in a long line of efforts to slow or eliminate solar usage in Utah. Solar has proven itself in other states and other regions. RMP needs to embrace it for the good of all Utahns and quit working to protect their vested interests and self-interests.

If the proposal by RMP is allowed to go forward, it will be a huge mistake and set back clean economical power in Utah and be a huge embarrassment to our state.

Thank you for accepting public input. I find that this deadline is very tight and there was not much notice or opportunity for the public to be aware of this onerous proposal. I am certain that there are many more Utahns that feel as I do, but are not aware of the proposal nor the opportunity to comment.

Thank you! Stephen R. Tolman 1881 E 6825 N, Liberty, UT 84310

**Lindsey Teasdale** <lindsey.teasdale@gmail.com>

Tue, Nov 22, 2016 at 3:18 PM

To: psc@utah.gov

To whom it may concern at the Public Service Commission of Utah,

I recently learned that you are deciding whether to approve a proposal that would require rooftop solar consumers to pay special premiums to Rocky Mountain Power during certain "peak usage" hours that RMP dictates, without any additional compensation to the consumers for the electricity that is produced by their solar panels.

Please do not approve this protectionist proposal that will destroy the state's potential to be a leader in solar energy, that will encourage continued reliance on coal-powered electricity, and that penalizes the people who try to embrace clean, passive, and innovative technology and the industries that make that possible. We in Utah are fortunate to enjoy so many sunny days, and the potential for a local solar industry boom is awesome. Unless, of course, the PSC passes laws, such as the proposal you are not considering, that stifle that potential and put the many people already employed in the solar field out of work.

Those with solar panels on their rooftops are not catching an easy break on RMP's dime. My family invested in solar panels and we took out a hefty loan to do so. We continue to support RMP by purchasing power from them to supplement our energy usage, and our combined monthly costs are at least comparable to what we were paying prior to investing in solar panels. Although we likely won't see any return on our money for at least another decade, we did a lot of homework before deciding to purchase solar panels and we feel good about our investment because it is socially responsible. We would not be able to afford to make the same decision if we had to pay the premium under consideration for peak energy use.

Tesla has created batteries to store energy produced by the solar roof tiles that it plans to make available in 2017. When this technology is widely available and adapted, which I have little doubt that it will be, RMP's concerns about needing to supply so much energy to rooftop solar companies during peak hours will be moot.

Please don't rush to approve this proposal. Please allow Utah to be a leader in solar. Please don't put the corporate interests of RMP over the interests of the public. At the very least, please wait a few years before considering such a significant proposal as what is in front of you now.

Thank you,

Lindsey Teasdale

## Solar Net Metering

1 message

---

**Sterling Peterson** <speterson@solcius.com>

Tue, Nov 22, 2016 at 3:18 PM

To: PSC@utah.gov

To the Public Service Commission,

I am writing because I am concerned about Docket 16-035-T14. As a Utah citizen and customer of Rocky Mountain Power I am worried, like many others, that the monopolized giant is trying to stomp out solar competition. Even if we neglect to consider the business and economic drawbacks, penalizing those who are making a concerted effort to be "green" will ultimately become a detriment to you and me personally. This is because driving up fees and prices will discourage solar users which ultimately means more pollution from the added coal burned to power their homes. Personally, I enjoy the mountains and the nature around me and think it would be a shame if we didn't do our part. Simply said, I do not enjoy breathing toxins and absolutely do not want my children breathing toxic air.

Please do not let Rocky Mountain Power take advantage of us yet again.

Thank you,

Sterling Peterson

## Docket #16-035-T14 Public Comment

1 message

---

**Jeff Tolman** <jtolman@q.com>

Tue, Nov 22, 2016 at 3:19 PM

To: psc@utah.gov

I would like to give you some feedback on the projected Rocky Mountain Power request for a change in their net metering program. There are several key issues that I am vehemently opposed to.

1. They are putting a date of December 9th as the day that the new changes will go into affect when the PSC has determined that this won't be decided until August of next year. The fear factor that this will give to anyone who is considering solar will virtually cause any potential solar customer to wait until next August to see the results before they make a decision. For all practical purposes that will close virtually every solar company in Utah. The date for the effect of whatever the decision is must coincide with the date of the decision by the commission. If the goal for Rocky Mountain Power is to cripple the industry then allowing this date accomplishes that whether the PSC approves this or denies it.

2. I agree that there probably should be a minor change in the current net-metering program but this goes so far beyond what is reasonable that it shouldn't even be allowed to be considered. It should be reconsidered when there is an option such as changing the connection fee from \$6 / month to \$15 or even \$20 per month.

3. The environmental and health affects of going solar would be lost. Thousands of jobs would be lost and many companies will be out of business overnight. Simply by changing the effective date to coincide with the approval or denial of the proposed changes allows the industry to have time to not rush into decisions which could be wrong for all parties. The current structure is equivalent to the electric chair for the entire industry. I hope that is not the goal of public services commission, even if it is the goal of RMP.

4. The current proposal that only grandfathers the current homeowner until they sell the property also seems unreasonable. It would appear to me that once a net meter is installed that that net meter should be grandfathered into the current program for the time that the homeowner owns the home and is on that program or 10 years (as an example) whichever is later.

I hope that the commission will take these items into account and remove the December 9th date and move it to coincide with the approval or denial of this proposal. By allowing the December 9th date is equivalent to executing first and then finding out if they are guilty or not guilty after they are dead. At that point it won't matter much what the findings and decisions are.

Sincerely,

Jeff Tolman

**Suzanne Elger** <selger@me.com>

Tue, Nov 22, 2016 at 3:20 PM

To: psc@utah.gov

To Whom It May Concern:

I am in opposition to PacificCorp-RMP's "Advice No. 16-13" filed November 9, 2016, that would change the rate structure for rooftop solar customers. Therefore I urge the PSC to deny the utility's fast track request and require it to use the normal rate-making process for its proposed changes.

We relocated to Utah and are building a home and adding solar panels to take advantage of Utah's abundant sunshine. When we tell people we are using solar, everyone comments "isn't that expensive?" We acknowledge that it is costly but it is the right thing to do for a variety of reasons: global climate change, new technology which creates new local jobs, and maintaining a beautiful state by not creating pollution from fossil fuel usage. There must be room in the economy for a variety of sources of energy, especially renewable sources for the long term health of the world.

Thank you for accepting public comment on this important issue. Please consider extending the comment period as this issue was likely lost in the coverage of the recent Presidential election.

I respectfully request the PSC to reject PacificCorp-RMP's current rate change request.

Respectfully,  
Suzanne Elger

The fees requested by Rocky Mountain power are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah.

The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost.

Please do not let this request be a major setback for utah.

**Mark Rohde** <mrohde05@gmail.com>

Tue, Nov 22, 2016 at 3:22 PM

To: psc@utah.gov

Dear Commissioners,

I cannot believe what I just heard that Rocky Mountain Power is trying to take away freedom of choice. I thought Rocky Mountain Power was a proponent of solar and wind power and going green, now it appears they are only interested in power dominance for themselves and could care less about the environment.

As you can tel,I I am incensed by what I thought was a public utility that cared about doing the right thing. I am opposed to Rocky Mountain Power limiting my freedom of choice, and my ability to control my energy needs, and in the process help keep emissions and energy costs down. Rocky Mountain should be promoting clean generation of power by whatever means possible.

I have heard that other utilities have raised rates to discourage personal solar generation. This has led to companies shutting down and the increased use of greenhouse gasses to the detriment of our future.

In the best interests of Utah citizens, please protect us and stop Rocky Mountain Power's play to enrich themselves, further their own interests and exert excessive control over Utahns.

Thank you,  
Mark Rohde

**Mikayla Murphy** <mmurphy@solcius.com>  
To: Psc@utah.gov

Tue, Nov 22, 2016 at 3:23 PM

Good afternoon,

I would like to urge the the State of Utah not to accept the RMP proposal stating to rid the state of solar power making it worthless to have a solar system on your home. Not only is it beneficial to our state and provides many people with jobs it also is a good sustainable way to produce clean energy for our environment. I hope as you review the pros and cons of solar you ask yourself. "Is Solar beneficial in the long run?" The answer would then be yes, it is. Please do not fall to the corporate pyramid. SAVE SOLAR IN UTAH.

Best regard,

Mikayla Murphy

## Docket #16-035-T14 Public Comment

1 message

---

**Donald R. Briel** <Don.Briel@comcast.net>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:25 PM

Dear Commissioners,

This email is in regard to docket #16-035-T14 for public comment.

I am stating my opposition to PacifiCorp-RMP's Advice No. 16-13, filed on November 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to suspend the tariff and not let it take effect on December 9<sup>th</sup> as Rocky Mountain Power has proposed. Please make them use the normal rate-making process for its proposal.

My experience with Rocky Mountain Power has been less than satisfactory. When we built our home years ago Rocky Mountain Power convinced us to go all electric and gave us a special reduced rate for doing so. Soon after that the special rate went away and they blamed the PSC. Now I am on a fixed income and the power rates just continually increase. I recently invested in a solar power system to help defray the rising costs. Once again, Rocky Mountain Power would like to take away the benefits and force me to pay premium prices. Since we will generate the most power when Rocky Mountain Power has their peak demands and our usage is greatest when their demands are the lowest it seems this large investment benefits them as well as us.

Solar is also an investment in clean renewable energy that is becoming the way of the future. It helps our air and our economy. Why penalize the people that are making large investments for the betterment of all?

I thank the Commission for accepting this public input, albeit on very short notice. On behalf of the ratepayers and the general public in Utah. Please reject Rocky Mountain Power's request for this rate hike.

Thank you!

Donald R. Briel

Dear Commissioners,

I am fully opposed to PacifiCorp-RMPs "Advice No. 16-13" which was filed November 2015. This would change the rate structure for rooftop solar customers and I urge you to deny Rocky Mountain Power (RMP)'s request for a fast track. This is too important of an issue to avoid the normal rate-making process for proposed changes.

I am the President of TBC (Total Building Commissioning Inc.). Our office is in downtown Salt Lake City. I am very concerned with the air quality in the valley and how this affects our employees and their families health and quality of life. We also have serious issues attracting employees from out of state due to the states reputation for un-sustainable and anti-green environmental practices. By implementing RPM's proposed changes, this will increase the costs for new rooftop solar customers, and infringe on innovation and change that would benefit the entire state, and absolutely here locally in this location of inversion and pollution.

Thank you for accepting public input, although there was certainly little time for it. I am requesting the PSC, in the interest of ratepayers, and all of Utah's public, reject PacifiCorp-RPM's current rate change request.

Best regards,

## RMP Rate Change

1 message

---

**Shaun Alldredge** <shaunaldredge11@gmail.com>

Tue, Nov 22, 2016 at 3:29 PM

To: psc@utah.gov

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I would like to urge you, the Public Service Commission to reject or suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require RMP to use the normal rate-making process for its proposed changes. The looming decision has already discouraged many potential new customers and has dramatically decreased normal sales volume. Accepting this change would lead to definitely hundreds and possibly thousands of jobs being lost right before the holidays.

Thanks you,

Shaun Alldredge

To: psc@utah.gov

Dear Commissioners,

Please consider **not** excepting the RMP rate change proposal associated with rooftop solar, In my mind it creates a monopoly and does not allow me the choice as a consumer, to me this is a major overreach providing for a government regulated monopoly.

Please keep me informed on this issue. Thank you.

Marcus Blood

Below, and attached, is a letter from the City Council of Park City. Please let me know what questions you have.

Luke Cartin

Environmental Sustainability Manager

Park City Municipal Corporation

[435-615-5204](tel:435-615-5204)November 22<sup>nd</sup>, 2016

Subject: Rocky Mountain Power Tariff 16-035-T14

Commissioners,

Park City has grave concerns with Rocky Mountain Power's proposed rate changes to net-metering and residential solar rates. The aggressive timeline and financial impact of these proposed changes would create significant barriers to our community's stated sustainability goals. Please deny this docket in order to allow a broad discussion about the costs and benefits of roof-top solar in Utah.

Park City has a strongly supported goal of 100% renewable electricity for all city-operations by 2022, and community-wide by 2032. The city has made strides in reducing barriers for installation of solar panels within city-limits, including waiving building fees. We have partnered with Summit County to raise the awareness of energy use within our communities, and are a national finalist in the Georgetown Energy Prize for our energy leadership. Solar installations in our community defer costly additional generation, distribution and transmission. Rooftop solar also has been repeatedly proven to provide voltage regulation at no additional cost to the utility. It has also been an economic driver for our community with strong participation in Mountain-Town Community Solar.

We believe that this fast-tracked approach is rushed without broader discussion or study, which should include impartial review of the full costs and benefits. There have been multiple studies that show that residential solar has a net benefit to the utility and its customers by creating jobs, improving energy awareness, deferring costly utility upgrades, and creating clean renewable energy at where it is needed. State-level Public Utility Commission studies completed in Maine, Missouri, Vermont, Mississippi, Minnesota, and many other states show that residential solar benefits outweigh the costs.

Please deny Docket 16-035-T14 to allow for a substantive discussion of the benefits and costs of residential solar. We believe this rushed approach will lead to drastic and negative impacts on our community and the State of Utah overall.

Sincerely,

City Council of Park City

1 message

---

**Shane Perkins** <shane@legendsolar.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:31 PM

Dear Commissioners,

I/We are completely OPPOSED to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge you as the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have been a Utah resident for 37 years. I opened my business (Legend Solar) in 2012 and now employ 200+ fellow Utahns. Rocky Mountain Power's proposal to have all new net metering customers after December 9, 2016 be placed on a new rate that has not yet been decided is necessary by your body or defined will create significant uncertainty for my business. It will be impossible for me to offer a rooftop solar product to homeowners across the state without knowing how rates may change. This proposal will halt my business activity.

I ask you to please reject Rocky Mountain Power's proposal and maintain Utah's status as one of the most business-friendly states in the country.

Thank you Commissioners for accepting public input, though the deadline should be extended. Respectfully I/WE request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

Shane Perkins

**Kelly Francis** <kfrancis@aero-graphics.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:32 PM

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. This cost increase would hurt a budding new industry and impede progress toward cleaner air in Utah. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed, and require it to use the normal rate-making process for its proposed changes.

Over the next 35 years, Utah's population is expected to nearly double, putting our health and the health of children at risk if choices aren't made to enable renewable energy adoption. On the positive side, Utah now ranks #1 in the nation in clean energy job creation. It has been projected that, over the next 10 years, 7,000 new solar jobs will be created in Utah.

I applaud your efforts in accepting public input. However, I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Best regards,

Kelly Francis, CP, PMP

## I am opposed to Schedule 136 and its related Schedule 5 tariff

1 message

---

**Tom Lebsack** <tom.lebsack@gmail.com>

Tue, Nov 22, 2016 at 3:33 PM

To: psc@utah.gov

I would like it noted that I am opposed to Schedule 136 and its related Schedule 5 tariff and respectfully ask PSC to deny them. I believe the proposal, if approved, will add uncertainty to solar, reduce the financial return of home solar power systems by over half and also reduce motivation to conserve energy. I am proud that in 2015 Utah had the nation's 8th largest solar market. We have over 6000 solar homes and 92 solar businesses in the state supporting nearly 3,000 solar jobs. If approved, this proposal will apply the brakes to this engine of clean energy growth and establish a dark precedent for other utilities in Utah and surrounding areas.

**Dean Wood** <Dean.Wood@ipsc.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:34 PM

I work in the power generation industry and I also have solar panels on my roof. With a signed net-metering agreement in place with Rocky Mountain Power, I suppose I am "Grandfathered in" with regard to these proposed changes to net-metering rates but I am against this proposal. PacifiCorp claims to be taking a loss on home-solar net metering stemming from increased mortality rates on transformers and other causes. If this is indeed the case, demand their numbers and perhaps address those issues individually. The charges for home-solar generation that they are proposing is just too much in my opinion. Turn them down!

**David Lundgreen** <DLundgreen@novatek.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:35 PM

Dear Commissioners,

My name is David Lundgreen and I am a mechanical engineer. I have long been looking into solar as an alternative to increasing energy rates. I have just learned of PacifiCorp-RMP's advice No. 10-13, filed Nov 9, 2016 and would like to voice my concern and urge the commissioners to suspend the tariff scheduled for Dec 9.

I believe that we should be looking at ways to increase energy production and not penalizing those home owners who are helping to produce it. My family and I are in the process of saving enough to start installation of solar panels and this rate change would make it so that the payoff date would be too far into the future to make the change feasible. Please allow enough time for the public, not just the power companies, to weigh in on the subject. This is way too quick and it will take some time for the general public to become educated. Please allow the public choose what is best for themselves.

Sincerely

David Lundgreen

**Wheeler, Kent R** <Kent.Wheeler@terracon.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:37 PM

Dear Commissioners,

I am writing in opposition to PacifiCorp's Rocky Mountain Power's Advice no 16-13 to change the rate structure for rooftop PV Solar. How can a utility company be allowed to raise its rates like this. I am a solar power user, and all of a sudden its not the power I'm paying for but the access. This seems to me to contradict everything Utah stands for. Please suspend the proposed tariff that is souse to come into effect on December 9, and tell PC/RMP that they need to learn to live in a new world that focuses on their clients desire for choosing the source of their energy.

Thanks

Hello Public Service Commission!

I am emailing you to let you know of my concern with Docket 16-035-T14. The December 9th rate change is completely ridiculous. The impact that this has on solar is huge, and for RMP to ask for every customer that has gone solar after December 9th to be on the new net metering is ludicrous. This will drastically change the confidence of homeowners wanting to take advantage of solar, thus making solar a stagnant industry for 6 or 7 months. Please think about the public when making this decision and how important the growth of the solar industry will be moving forward.

Thank you,  
Jonah Cafferty

Dear PSC Commissioners,

It looks like to me that Rocky Mountain Power is using a "back-door approach" to raise their profitability by getting a rate structure increase without going through the normal rate structure approval procedure. I would think they would be grateful to rooftop solar customers for reducing the need to provide more infrastructure in order to keep up with increasing demand for energy, not punish them for making their job easier by charging them more than ever.

I bought a rooftop solar system to help make our air cleaner and to work toward energy independence. We need all the clean and efficient energy we can get. Please reject RMP's request for higher rates on solar power. Thank you for your time and consideration.

# Please deny the solar rate change in Schedule 136 and its related Schedule 5 tariff

1 message

**Evan Johnson** <thaddeusmt@gmail.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:40 PM

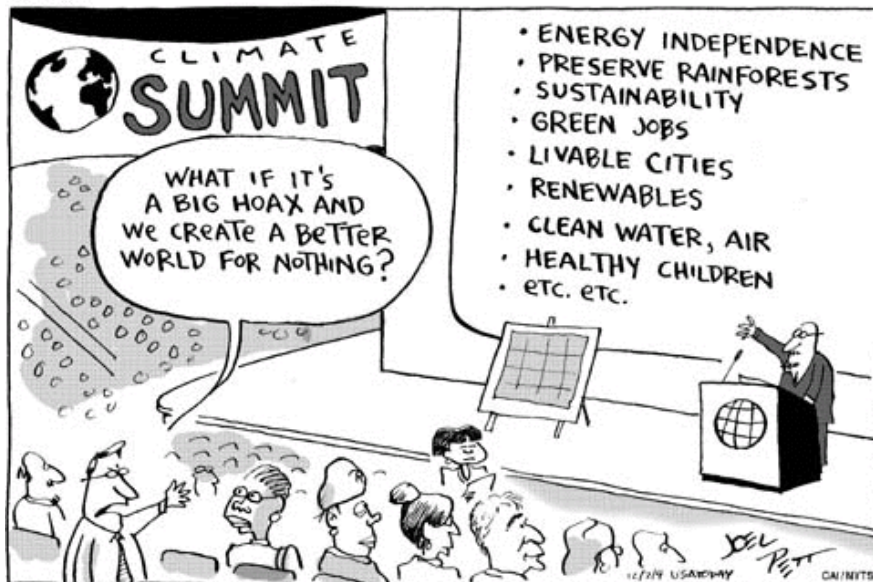

To whom it may concern at the Utah Public Service Commission,

Please consider denying the rate changes proposed by Rocky Mountain Power that negatively affect solar panel installation. Specifically Schedule 136 and its related Schedule 5 tariff. These rates and tariffs will not only hamper the growing solar market and the many jobs it creates, but will also generally discourage our state's (and nation's) transition to renewable energy. Encouraging solar energy development will have more long term positive benefits for *all* of us than continuing to burn as much coal as possible - especially in a state plagued by air quality issues.

Thank you,

**GLENN** <glenn.embry@comcast.net>  
To: Psc@utah.gov

Tue, Nov 22, 2016 at 3:44 PM

Dear Commissioners,

I am adamitely opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

Paragraph #2 (optional): Summarize the key reasons why you feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Consider expressing how such changes would personally impact you. Also, feel free to include that you have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.

Last paragraph: Thank the Commissioners for accepting public input, though the deadline should be extended.

Respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Your personal information: Full name ... City and State ... Email address

**Daunt Wayman** <daunt007@gmail.com>

Tue, Nov 22, 2016 at 3:44 PM

To: psc@utah.gov

Dear Commissioners,

I would like to voice my STRONG OPPOSITION to the rate increase proposed by Rocky Mountain Power. I also ask that any other burdens on rooftop solar or any other methods of energy generation which help us in using less fossil fuel energy be opposed vigorously. I would like to see the deadline for public comment extended, instead of ramming things through as they have tried with this proposal.

We should encourage clean, renewable energy. This rate increase does the opposite, supposedly to fund the infrastructure that is already in place.

I would like to see the current rate change request denied, as well as a longer public comment window, for the benefit of all Utahns. Thank you for listening.

Date: 22 November 2016  
Subject: Docket #16-035-T14 Public Comment

Dear Commissioners,

I write regarding Rocky Mountain Power's Advice No. 16-13, filed November 9, 2016, proposing a new Schedule 135A for "Net Metering - Transition Service."

### **About me**

My name is Daniel V. Schroeder and I have been a Rocky Mountain Power customer since 1993. I have been a net-metering customer since August 2015. I consider myself knowledgeable about home electricity use and have monitored my own use through careful tracking of bills, meter readings, and the use of plug-in power meters. Since last year I have also monitored the production of my rooftop solar panels through the Enphase Envoy monitoring system, while also monitoring my electricity usage with an Efergy CT-style sensor and data-logging system. I therefore have a thorough understanding of my own household energy use over long time periods, and of my minute-by-minute power use at all times of day, during all seasons. I am also reasonably familiar with statistics on the growth of the photovoltaic industry on a regional, national, and world-wide scale. To establish my credentials, let me state that I hold a PhD in Physics from Stanford University (1990), and that I am a Professor of Physics at Weber State University. These comments are mine alone and do not represent the views of my employer or any other organization.

### **General remarks**

I have read the docket materials for this proposal, and also the recently filed materials for the related Docket 14-035-114, outlining the issues with continued growth of rooftop solar generation and net metering in Utah. While I do not have the resources to assess the details of Rocky Mountain Power's elaborate analysis of the costs and benefits of the net metering program, I would agree more generally that the current policies and rate structures that govern this program will not be sustainable over the long term.

Stepping back and looking at the big picture, it is clear that within about a decade, electrical grids throughout the southwestern U.S. will be flooded with solar-generated power whenever the sun is shining. This power will inevitably come from a mix of utility-scale solar farms and distributed rooftop systems—both of which have their advantages and disadvantages. Under these radically new conditions, electric utilities will need to provide incentives to all customers to shift their demand toward times of sunshine and away from times of darkness. Rocky Mountain Power (and other electric utilities throughout the region) need to proactively look ahead to the coming solar era and plan for a smooth transition that will minimize disruption to their customers.

It is equally clear, however, that the era of abundant daytime solar power has not yet arrived in Utah. According to the testimony filed with Docket 14-035-114, Rocky Mountain Power's Utah net metering customers are projected to number approximately 16,000 by the end of this year. That is only about two percent of all Rocky Mountain Power customers in Utah.

Similarly, the construction of utility-scale solar farms in Utah has lagged behind that in other southwestern states. Even in California, which has led the way in both rooftop and utility-scale solar development, solar generation still accounts for no more than about a third of all power on the grid at times of peak solar generation. A corresponding statistic for Utah does not seem to be readily available, but the percentage must surely be in the low single digits.

Thus, Rocky Mountain Power is not currently facing any kind of solar-caused emergency that would necessitate a moratorium on new solar development or any comparably disruptive action. There is still time to take a thoughtful, long-term approach to planning rate structures that will be appropriate for the coming solar era.

### **The current proposal**

The proposal before you at this time is to put all new net metering customers on notice that, within less than a year, they are likely to be transitioned to a rate schedule that is fundamentally different from the current one. (For simplicity I will focus only on residential net metering customers, who are by far the most numerous and for whom the proposed new schedule would be the most different.) This “transition” schedule (135A) would be extremely disruptive because it would completely invalidate the traditional cost-benefit analysis that homeowners conduct before investing thousands of dollars in a solar generation system (or before agreeing on a price when a home with an existing generation system is being sold to a new customer). Even a certain transition to the new proposed Schedule 136 (and the associated Schedule 5) would up-end that analysis; introducing uncertainty over whether Schedules 136 and 5 will eventually be adopted as proposed, or will be adopted in modified form or rejected entirely, is still more disruptive because the uncertainty makes a cost-benefit analysis impossible. The proposed Schedule 135A would therefore have essentially the same effect as a moratorium on new net-metering applications, with further impacts on home buyers and sellers. At this time there is no emergency that calls for such drastic action.

Let me now explain why the rate schedule proposed in Schedule 5 would (even if it were certain to be implemented) be so disruptive to customers who might be considering an investment in a new solar installation (or a home with an existing system). This analysis is relevant to the current proposal because if Schedule 135A is adopted at this time, then these customers will inevitably look to Schedule 5 as the best guess for what their rates would be over most of the lifetime of their generating systems.

Rocky Mountain Power has provided a “Monthly Bill Comparison” table as Exhibit RMP\_(JRS-7), submitted 9 November 2016, under Docket 14-035-114. Unfortunately, this table is incomplete in that it fails to show any data for customers who use less than 500 kWh per month. I have therefore downloaded and revised the table to include comparisons for usage levels as low as 100 kWh per month (which happens to be my own approximate usage level). My revised table is attached as the final page of these comments. I have also modified the rate calculation formulas to eliminate the rounding of the peak demand to the nearest kilowatt. This rounding produces confusingly abrupt variations in the displayed results, and is inappropriate in any case because the goal here is to show average billing amounts for a typical customer over many months—not the exact bill charged to any particular customer during any particular month. Aside from the elimination of this rounding, the formulas used

are identical to those in Exhibit RMP\_(JRS-7).

There are many notable features of the data in this table, but the most important thing to notice at this time is that for many customers whose usage levels are relatively low, the percentage change in the monthly bill upon installing a rooftop solar generating system would be *positive* (see the highlighted table entries). That is, these customers' bills would actually *increase* as a result of the installation, making the installation a financial liability rather than an asset. Keep in mind that this calculation does not even include the capital cost of the generating system, so even if a customer could acquire a generating system for free, there would be a long-term financial penalty for doing so. An important special case would be a customer who is selling a small solar-equipped home to another customer: even if the seller was eligible to stay on Schedule 135, the buyer would be forced onto Schedule 135A and would therefore consider the solar panels to be detrimental to the value of the home.

The situation for many low-use customers would actually be much worse than shown in the table, because the table calculates the peak demand charge of \$9.02/kW using a linearized model of customers' average on-peak demand. That is, the on-peak demand is assumed to be directly proportional to the total monthly energy usage, with a negative offset that is directly proportional to the size of the solar generating system. While the parameters of this linear model have apparently been carefully chosen to match data from an empirical study, the assumption of linearity almost certainly breaks down when the model is extrapolated to usage levels under 500 kWh/month. For example, at a usage of 100 kWh/month and 100 percent on-site energy generation, the model assumes a measured peak demand of only 0.33 kW, which would be extremely difficult for most homeowners to achieve. As noted above, my own monthly energy usage is approximately 100 kWh; yet my monthly on-peak demand, averaged over 60-minute time periods as called for in Schedule 5, is typically in the range of 1.0 to 1.5 kW. This is because I occasionally use an electric stovetop and oven to prepare evening meals. Even though cooking accounts for only about 10 percent of my total household electric energy use, it is responsible for nearly all of my peak demand. Similar numbers might apply to a homeowner who makes only occasional use of an electric space heater or a central air conditioning system. In any case, for such a homeowner the peak demand would typically be about a kilowatt greater than assumed in the table, so the monthly bill would be greater by about \$9.02 plus surcharges, and the percentage change from before the solar generation system was installed could in some cases exceed 100%. In other words, acquiring a solar generation system could result in a doubling of the customer's monthly electricity bills. Even for customers who use a few hundred kWh of energy per month, applying more realistic peak demand estimates can easily cause some of the negative "% Change" entries in the table to become positive.

This is not the time to get into a discussion of what would constitute a fair rate schedule for customers who use relatively low amounts of energy per month, or for customers with relatively low load factors. The point is simply that no customer's electricity bill should increase at all—let alone double—as a result of installing a solar generating system. It is inappropriately disruptive to even put customers on notice that such a rate change might apply to them in the near future. Any sensible rate schedule for customers with on-site generation would never cause their bills to increase and, in fact, should always reduce their bills by at least the value of the electricity that they are generating and using directly on-site.

The proposed Schedule 5 also has other problems, which I will address in future comments on Docket 14-035-114.

### **Recommendations**

I therefore recommend that the Public Service Commission reject the proposed Schedule 135A at this time. Similarly, the PSC should reject any other schedule or modification that would open up the future possibility of charging net metering customers *more* than they would be paying (under Schedule 1 or a future modification of it) if they had no on-site generation systems. I further recommend that any new net metering schedule guarantee that net metering customers will *never* pay more than they would otherwise pay, without net metering, for the actual electricity that they are taking from the grid. This constraint is extremely modest but absolutely fundamental to the logical consistency and fairness of Rocky Mountain Power's electricity rates. On top of this fundamental constraint, I would argue that net metering customers should be guaranteed compensation at fair wholesale value for the energy that they push onto the grid for their neighbors to use.

Because of the potentially disruptive effect of this proposal on Rocky Mountain Power's customers, including not only those contemplating installation of a new rooftop generation system but also buyers and sellers of homes that already have such systems, I respectfully ask that the comment period on this proposal be extended to allow interested parties to conduct further analysis and perhaps recommend feasible alternatives. As noted above, there is no "solar emergency" in Utah so there is ample time to take a more thoughtful and less disruptive approach.

Finally, I recommend that the Public Service Commission work with Rocky Mountain Power to begin revising rate schedules for *all* customers to reflect the coming reality of a grid that will be flooded with solar-generated power during the daytime hours. All rate schedules that distinguish between on-peak and off-peak times should be revised with updated definitions of the peak hours. Plans should be made to move more customers—perhaps all customers—onto time-of-day rate schedules. Only in the context of sensible rates for all customers will it be possible to address the issues associated with net metering in a fair and logical way.

Thank you for your consideration of these comments.

Sincerely,

Daniel V. Schroeder

**I REJECT** Rocky Mountain Power's proposal to charge solar customers more than what is reasonable for their choice to install solar systems on their homes. It is not in keeping with the idea of making our world a better and cleaner place if taxes and costs are levied as a pseudo penalty against those who are doing their part to help the environment.

Cassandra L. Gallagher

Tue, Nov 22, 2016 at 3:46 PM

To: psc@utah.gov

Dear Commissioners,

Rocky Mountain Power has filed an anti solar request with the PSC. RMP wants permission to change the rooftop solar rate structure, effective next month, without having to go through the normal rate-setting process. PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge you to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

The PSC has opened a docket for RMP's request and will take public comments until November 22, 2016. This quick deadline is unreasonable and should be extended.

This proposal has until December to be accepted, rejected or suspended. PLEASE REJECT it! If accepted it could easily destroy the solar industry in this state and worsen global climate change.

This rate proposal by RMP was carefully timed to leave the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. They have also carefully chosen the week of the Thanksgiving holiday for the deadline for public comment to discourage participation. This is unfair for public comment and an act of greed on the part of RMP. It must be rejected! It will easily cripple the public's ability to get affordable solar energy and is another example of government overreach and monopolizing what should be a free market!

Thank you for your time and consideration,

Phillip Clair

**Adam Spivak** <aspivak1@gmail.com>

Tue, Nov 22, 2016 at 3:47 PM

To: psc@utah.gov

To Whom It May Concern,

I am a Utah resident and homeowner and am writing to express my opposition in the strongest possible terms to the proposed Rocky Mountain Power request to the Public Service Commission to change rates for solar customers. The solar industry is a boon to our community and to our environment. This rate change will destabilize this growing industry and serve to deepen Utah's reliance on fossil fuels. I recently installed solar panels on our garage roof (paid for out of my own pocket) and am proud to be contributing a significant amount of energy back into the power grid that comes directly from the sun. It is senseless to de-incentivize this activity in order to enrich a fossil fuel company, particularly as our winters become shorter and warmer due to man-made climate change. There is no justification to potentially destroy the solar industry in Utah solely to increase the profit margin of Rocky Mountain power, a massive conglomerate that is a major environmental polluter. I remain their customer though I have taken it upon myself to do some of the work for them by generating energy and contributing it back to the grid. The solar rate increases will lead to a decrease in customers like me from investing in solar panels and diversifying our power generation. This is a remarkably short-sighted proposal that deserves to be rejected outright. The time has come to make a stand for our environment - we are all in this together, and last I checked it is only getting hotter. 2016 was the hottest year ever recorded, followed by 2015 (and 2014 before that). What will it take for greedy, monolithic, litigious companies (and politicians who do their bidding) to start to act upon these facts instead of considering only their short-term profit margins? Please do not hesitate to contact me if I can provide further rationale for rejecting this proposal.

Best regards,

Adam Spivak

**Bonnie Kenison** <bonnie@kenison.net>

Tue, Nov 22, 2016 at 3:48 PM

To: psc@utah.gov

To Whom It May Concern -

I oppose the current 3-tier rate structure proposed by Rocky Mountain Power for Net-Metered customers. We need to do all we can to become more energy self-sufficient. Handicapping solar power and discouraging its use is wrong for our environment. More than just rate costs need to be taken into account. The positive effect of solar power on our environment needs to be considered. Please do not approve this current proposal.

Bonnie Kenison

**Darrell Lewis** <dclewis71@gmail.com>

Tue, Nov 22, 2016 at 3:48 PM

To: psc@utah.gov

Dear Commissioners,

I want to voice my total disgust for what Rocky Mountain Power is suggesting for the solar customer rates. I urge you to suspend the tariff and not let it take effect. I understand them wanting solar customers to pay for ongoing maintenance costs of the grid. They can capture that money in a simple fee. What RMP has requested in my opinion is a direct attempt to stop the conversion of their customers to solar, thus strengthening their monopoly on its rate payers.

Solar is a clean energy that we, urgently need on the Wasatch front. Just take a look outside at the quality of air in the winter months with the inversion.

If RMP is allowed to proceed as they have recommended it will all but kill solar power in the RMP service territory. Customers at this time have a choice for their power needs in choosing solar. RMP and municipalities have had a strong hold on customers. Customers should have an option for clean renewable power generated on their own roof tops. Please consider what passing this would do. RMP would be able to happily continue to serve it's customers with no real choice in where they get their power. I have already made the investment for solar energy. I did so because I have a son who struggles with asthma. Every year we worry about this young man being able to breathe clean air. Restricting solar energy by allowing RMP to charge outrageous prices will kill solar power in Utah.

Thanks for accepting my input.

I respectfully urge the PSC, in the interest of ratepayers and the Utah public, to reject Rocky Mountain Powers current rate change request.

Darrell Lewis

**Aaron Knight** <aaronscottknight@gmail.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:48 PM

Dear Commissioners,

I am writing to let you know that I am STRONGLY against PacifiCorp-RMP's Advice No. 16-13 filed on Nov 9, 2016. I find it appalling that this so called "public utility" is chasing the almighty dollar. Here is a summary of my concerns:

-this rate action will "kill" any further development of "clean" energy in the state by making it cost prohibitive for customers to choose solar. This feels like a move to be more a monopoly

-as clearly documented, our state has a real clean air problem and any and all efforts should be made to help clean our air. Each and every solar installation is a step in the right direction. Our children will be here to live with the choices we make. Let's help them, in fact, let's make clean energy more affordable! Incent people to go clean. Our health and our children's health will benefit.

-I find it very suspicious that RMP submits the rate change during the holiday season when the chances that concerned citizens might miss the deadline and not respond. Seems fishy. If a rate hike is the right thing to do, shouldn't it be out in the open and not sneaky?

-by making these rate changes, RMP basically is eliminating the competition and limiting customer's choices for where to buy power. There are reasons we don't want monopolies.

-I just recently invested in solar, I use the term "invested" as it was a large cash output from me. Because it is clean, I have also purchased an electric car to also do my part for the environment. I know that the RMP is saying that I'm grandfathered with the current rates, but who is to say that they don't change that too and penalize those of us who have already invested. Again, this feels really wrong.

-I am very frustrated that RMP is completely \$ motivated and not doing their part to help the environment. Solar power is clean, reliable and makes sense. Why would we let big business take that away just so they make profit?

Thank you for allowing me to provide input, although I feel the deadline should be extended beyond the holiday season so everyone can respond.

I respectfully ask you to reject RMP's request to increase rates for solar customers.

I would love to hear your response

Regards,

Aaron Knight

**Kim Hunt** <kimwhunt73@gmail.com>

Tue, Nov 22, 2016 at 3:51 PM

To: psc@utah.gov

Dear Commissioners,

My name is W. Scott Hunt and I am opposed to PacifiCorp-RPM's advice No. 16-13 filed Nov. 9, 2016 that would change the rate structure for rooftop solar customers like myself. I urge the Public Service Commission to suspend the tariff and not let it take effect Dec. 9th as Rocky Mountain Power (RMP) has proposed, but request that it use the normal rate-making process for its proposed changes. Please consider a delay in this expedited process as to hear all sides for and against this proposal.

I am a residential solar rooftop customer and have many others in my neighborhood considering this clean air and efficient source of energy. Pushing this proposal through will deter many who wish to choose a cleaner source of energy for themselves and others. Because I have already made this choice, it could also limit the resources available to me to have this type of energy serviced. This decision could also limit free trade and further access to clean energy. I have read articles and studies done from other regions, such as California, where this type of energy (rooftop solar power) is beneficial and relieves the strain on power grids. California might be suffering from droughts, but they are doing much better than their recent energy crisis due to solar power.

Thank you for accepting my input in these matters. I thank you and the public thanks you. I respectfully request that the PSC, in the interest of solar rooftop ratepayers and the Utah Public, to reject PacifiCorp-RMP's current rate change request.

## I am opposed to Schedule 136 and its related Schedule 5 tariff

1 message

---

**Haley Lebsack** <haley.lebsack@gmail.com>

Tue, Nov 22, 2016 at 3:52 PM

To: psc@utah.gov

I would like it noted that I am opposed to Schedule 136 and its related Schedule 5 tariff and respectfully ask PSC to deny them. I believe the proposal, if approved, will add uncertainty to solar, reduce the financial return of home solar power systems by over half and also reduce motivation to conserve energy. I am proud that in 2015 Utah had the nation's 8th largest solar market. We have over 6000 solar homes and 92 solar businesses in the state supporting nearly 3,000 solar jobs. If approved, this proposal will apply the brakes to this engine of clean energy growth and establish a dark precedent for other utilities in Utah and surrounding areas.

Our economy relies on a strong, healthy environment. We can't open our ski resorts without snow and we can't attract mountain bikers with polluted air. Please, do the right thing. Solar should be encouraged and we should be doing all we can to help it not hinder it.

Utah public service commission,

Re: PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016

**For the fate of the positive Solar changes we have seen in the last few years, PLEASE REJECT Rocky Mountain Power's proposal to increase rates to Solar Customers!!**

Rocky Mountain Power's initiatives are to slow down the positive changes that solar is having on our power infrastructure, leaving them in more power to be in control of the future. In fact a MONOPOLY afraid of the future!!

Any costs Rocky Mountain Power says they are incurring more from solar customers is false. With more Solar Customers than ever before, KSL reported on October 8<sup>th</sup> from a RMP spokesman that...

**"The Utah Public Service Commission on Thursday approved a \$15.6 million decrease in Rocky Mountain Power's customer electricity bills. Overall, rates will decline 0.8 percent or about \$6.84 in annual savings for a typical Utah residential customer."**

Why the decrease????

**"The commission approves customer prices based partially on the expected costs of fuel and electricity purchases, with rates adjusted after determination of whether the actual costs rise or fall. The decision comes after the utility achieved lower fuel and electricity purchase costs than previously forecast, a news release stated."** (KSL reported on October 8<sup>th</sup>)

**The cost of electricity has decreased because of Solar Customers NOT increased the demand and costs!!!**

**Please continue supporting the positive changes the Solar Industry is having on our nation by voting against these rate increases to Solar Customers!!**

**Best Regards,**

**David Scott**

## Docket #16-035-T14 Public Comment

1 message

---

**Earl M. Woolley** <emwoolley2@gmail.com>

Tue, Nov 22, 2016 at 3:52 PM

To: psc@utah.gov

Cc: Bradley Daw &lt;bdaw@le.utah.gov&gt;

Commissioners:

I am writing to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016 which would change the rate structure for rooftop solar customers. I have investigated the information at <http://www.psc.utah.gov/utilities/electric/elecindx/2014/14035114indx.html> and urge the PSC to suspend the tariff and not let the proposed change in rate structure take effect on December 9 as Rocky Mountain Power (RMP) has proposed. I urge you instead to require RMP to use the normal rate-making process for its proposed changes.

We installed a rooftop PV power generation system on our home in March 2016, and, although the current RMP proposal apparently does not change the structure of our agreement with them, there is no guarantee that it would not change in the future. Further, I believe that the proposed changes would further inhibit new customers from installing PV systems in Utah, which, in my opinion, does not make good sense either environmentally for our citizens or economically for RMP. Rather, I believe that the state should take a stance that encourages, rather than discourages, homeowners from having PV systems installed on their residences. From what I have read, recent actions similar to that of this RMP proposal have proved this point in other states.

Finally, I thank you for accepting public input, and I suggest that at the very least the deadline for your decision should be extended. Certainly better publicity should be given to current RMP customers for them to analyze the proposal and to provide input to the Commission. Consequently, I encourage the PSC to reject PacifiCorp-RMP's current request.

Sincerely,

Earl Woolley

**Greg Lundell** <greg@lundells.us>

Tue, Nov 22, 2016 at 3:57 PM

To: psc@utah.gov

Cc: Representative Paul Ray <pray@le.utah.gov>, Senator Jerry Stevenson <jwstevenson@le.utah.gov>

Dear Commissioners,

Thank you for the opportunity to address PacifiCorp-RMP's Advice No. 16-13 filed on November 9, 2015 that would change the structure for rooftop solar customers. I am writing to strongly request that the commission suspend the tariff and not let the proposal requested by RMP take effect on December 9th. Additionally, I would request that RMP be required to use the normal rate-making process for its proposed changes for future rooftop solar customers.

Solar is an important industry in Utah and unreasonable rate changes could have drastic consequences to the job market in Utah. Drastic changes that are left unbalanced would also restrict free trade and limit access to clean and efficient energy. Roof top solar plays a valuable role in the power system and grid and should be wisely managed.

Again, thank you for taking public input on this important issue. I respectfully request that the PSC, in the interests of the ratepayer and the Utah public, reject PacifiCorp's rate request change for roof top solar.

Tue, Nov 22, 2016 at 3:58 PM

Dear Commissioners,

We have luckily become aware of Rocky Mountain Power's rate structure change request. I respectfully urge you to suspend the tariff, and not let it take effect, but require it to at least use the normal rate-making process.

I have followed the development of solar energy for over 30 years and have finally installed panels on my home, and will likely want to install panels on a new home (we may want to move in the future). I oppose the rate structure change and feel it is unwise and unreasonable. I believe in allowing choices for consumers that benefit the environment, reduce the load on our power grid, allow free trade, and provide economic benefits to consumers.

Thank you for accepting public input. Please know that I, and those neighbors I have discussed this with, strongly oppose RMP's request and respectfully urge you to reject their rate change proposal.

Tue, Nov 22, 2016 at 4:01 PM

Dear Commissioners,

The Rocky Mountain Power proposal to increase the rates of solar users is WRONG! We got a solar system for multiple reasons. Yes, to decrease our power bills, but also to be more self sufficient, and less dependent on other methods of power, NOT to gyp the power company! It is not fair for them to increase our bills-no matter for what reason they try to justify it. Just because we have a solar system does not make it so that we still do not use power. In fact when the power goes out, so does our solar! Not what we would have liked, however we will have to live with it. Please suspend AND reject the tariff and not let it take effect December 9th as RMP has proposed.

We cannot believe that the few number of people who have been able to afford solar, in comparison with those who have not purchased solar, will cut RMP profits so much they are crying so loud!

Please save the solar market! It is a great way to save coal burning fuels, and any other methods by which they make electricity. Please consider the benefits of rooftop solar systems as an important source of energy independence, and air quality.

Why should solar users have to pay for electricity we have produced with our systems?

Thank you for your time and accepting our input. Please reject the RMP proposal to increase our rates!

Sincerely,  
Alex and Genni Lott

## Docket #16-035-T14 Public Comment

1 message

---

**Todd Call** <tcall75@gmail.com>

Tue, Nov 22, 2016 at 4:02 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to express my opposition to Rocky Mountain Power's petition for rate increase as outlined in Docket #16-035-T14. This 11th hour petition circumvents the customary process that Rocky Mountain has followed for petitioning rate increases and allows for virtually no public input prior to the deadline for comment. Due to the strategic importance of this decision relative to the solar power industry, I urge the Commission to suspend implementation of this tariff until public opinion can be expressed.

Rooftop solar energy production within our state has allowed us to respond to a number of negative trends. First of all, rooftop solar has provided an alternative choice for electricity production beyond this single, monopolistic power company that serves our community. If an increasingly cost-effective alternative exists to fueling the Rocky Mountain Power (RMP) monopoly, I believe we should allow this option to exist. If RMP is allowed to implement their rate increase that solely and unfairly targets net metering customers, this action will most certainly kill the burgeoning rooftop solar industry in Utah, as similar actions have done recently in Nevada.

It is unconscionable for RMP to kill off the rooftop solar industry at a time when our society is increasingly concerned about the negative environmental impact of energy production from fossil fuel consumption. With its high number of sunny days per year, Utah is a prime location to harness clean, free energy from the sun--why should we allow RMP to close this door for the state of Utah? Solar energy technology has now become more efficient, more affordable, and more accessible to consumers--to allow RMP to stifle rooftop solar implementation flies in the face of free market principles that are the bedrock of our economy. RMP requires oversight by the Commission to prevent such abuses of influence. A healthy dose of competition will not harm our economy. On the contrary, this competition will help balance the energy production industry and will continue to provide jobs to Utah taxpayers.

Thank you for allowing the public to weigh in on this proposal. I urge the Commission to consider the profound negative impact this rate increase will have on net metering customers, on the solar industry, on freedom of choice, and on our free market economy. On this basis, please consider rejecting RMP's proposal.

Sincerely,

Todd Glendon Call

To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:03 PM

Dear Commissioners,

I was very disheartened to hear about the changes being advanced by Rocky Mountain Power (RMP). I am in complete opposition to any change the rate structure for rooftop solar customers. I would like to ask that the Public Service Commission suspend the tariff and not let it take effect December 9th as RMP has proposed. I feel it is important to the individuals and the State that RMP use the normal rate-making process for its proposed changes.

I am in the military and have made solar power a vital part of my retirement plan. After years of saving we were able to save enough money that we could buy a solar power system for our house. It was a very hard decision since there were numerous ways to invest the money at a higher rate of return which would of more than compensated for our power bill. In the end we felt that reducing our environmental impact was more important and that we could live with the extra time it would take to break even. I also love Utah and would like to stay in my house once I retire. The predictability of a stable power bill is important to me but since purchasing my system it has been under attack by the power company. I do not believe that RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers. I feel it is important to allow access to clean & efficient energy while the community reaps the economic benefits.

Thank you for allowing public input on the matter and I'm sure in the end you will make the right decision.

**Maati and Mona Maile** <mythias81@gmail.com>

Tue, Nov 22, 2016 at 4:07 PM

To: psc@utah.gov

Dear Public Service Commission,

I am a mother of 4 that works for a Solar Co. Please do not let Rocky Mtn Power raise the prices for roof top solar customers! This will eliminate my job! I am the main bread winner for my family and you will literally be putting thousands of solar workers out of a job, Has that even been considered? and for WHAT? So Rocky Mtn Power can have more money, so they can monopolize the energy in Utah and make it so no one has choices? Why the hell is this even under consideration? Is there no middle ground?

Punishing customers for helping the environment is disgusting! Last night on the news RMP's spokesperson said that Solar customers either have to decide if they are doing it to help the environment or doing it to save money...why the hell do we have to choose?!!! The tax credit of \$2000 was to reward solar customers was created for a reason. They wanted to reward people for helping the environment now that RMP is losing money we have to make change and raise prices. Also having solar companies has only helped the economy in Utah. Jobs equal tax payers!

I feel sick writing this and begging you for something you already know is morally wrong but thats what this world has come to. Its sickening! Do not let these bastards kill residential Solar in Utah like they already did in Nevada!!

Sincerely,  
Mona Maile

**Jeremy Young** <j13young@hotmail.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:08 PM

Dear Commissioners,

I'm writing to inform you of my opposition to PacifiCorp-RMP's "Advice No. 16-13" filed Nov. 9, 2016, and urge you to suspend the tariff and not let it take effect on Dec. 9 as Rocky Mountain Power has proposed. I ask that you require that Rocky Mountain Power use the established standard rate-making process for its proposed changes.

When I made the decision to purchase my rooftop solar system, I did so not only in support of renewable energy, but also as a long term financial investment. The system was not cheap and under the current rate structure, it will likely be 8-10 years for a return on my investment. While my monthly power bill is reduced, I still have a loan payment that I must make until that loan is paid off and my decision to install solar was based on this total combined cost. It was under these terms that I decided to do what I felt was best for my family and for our planet. If these changes are allowed to proceed, that same decision that I made in 2015, will likely go very differently for future potential solar customers, greatly limiting future installations of solar in our state. Given my 2016 solar production, I'm on pace to produce more power than I will consume. Rocky Mountain Power is set to benefit from my over production as their current structure does not require them to pay me for the extra energy that my solar system produces. I am creating clean and efficient energy that they are able to sell to other homes. It doesn't seem fair that I should now be asked to pay more for the privilege of producing power for them to sell to other customers.

Utah residents value our environment and nature more than most states, and Utah is currently positioned to be a leader in renewable energy, but proposals such as this will likely have a significant negative impact on these initiatives. I did a lot of research before deciding on my solar purchase. I've read many studies about the benefits of solar installations within a region. I've also read articles about the negative impact to solar owners and the solar industry in regions where similar proposed rate changes were allowed to proceed. Please do not allow Utah to be added to this list.

Thank you for accepting public input about this very important issue. Once again I respectfully request the PSC, in the interest of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Jeremy Young

Re: Docket # 16-035-T14 Public Comment, PacifiCorp-RMP "Advice No, 16-13 filed November 9, 2016

Dear Commissioners,

It has come to my attention that PacifiCorp-RMP is attempting to rush rate increase specifically aimed at solar costumers that seems to be timed to eliminate opposition. Please reject or suspend this tariff and not let it take effect on December 9<sup>th</sup> as proposed by Rock Mountain Power. (RMP). There are at least 2 sides to every issue and solar customers and the solar industry deserve a reasonable chance for rebuttal.

Please be aware that;

Solar power costumers not only save electricity but also do provide needed power back into the electrical grid during peak demand periods.

At a time that quality of our air is of great concern in Northern Utah, roof top solar power is one of the nation's cleanest sources of power and efficient energy and must be encouraged not discouraged.

Unlike other power sources solar does not need water to operate thus saving valuable water in our dry climate.

RMP themselves has invested in solar power and now appears to be trying to eliminate rival sources of free power forcing the public to invest in there systems.

No business should ever be allowed to control their competition or restrict free trade.

RMP is already monitoring and controlling tax money set aside to aid solar power customers that could be in my opinion better managed and more equally distributed to all deserving solar customers, not just a select few. It would be reasonable to divert some of this money back to RMP to cover justified expenses.

Private industries and small business including Solar Power must be protected.

Our Freedom to choose how to energize our homes and business must be a consumer's choice and not depressed by government regulated monopolies that do not face computation.

In addition it is my opinion the solar customers shouldn't be penalized for generation more power then they use. A person or firm should rewarded for their investment by be allowed to keep or even be paid for the excess electricity they proved beyond their usage. Current RMP controlled regulations take this power away every March.

Respectfully,

David Ormond

Tue, Nov 22, 2016 at 4:11 PM

Dear Commissioners,

Me and my family are greatly apposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers in Utah. I would greatly urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

This proposal is highly unreasonable and would destroy the rooftop solar market in Utah, restrict free trade, and limit access to clean & efficient energy. On a more personal note, I would lose my job and would have to start collecting unemployment and would have a lot of unhappy family and friends who has bought solar through me. I have been in the Solar industry in three states and have never seen fees proposed even close to this one. I have also read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid.

Thank you for accepting public input, though the deadline should be extended to allow for many others like myself to give there input.

In the interests of ratepayers and the Utah public, I would sincerely ask you to reject PacifiCorp-RMP's current rate change request.

Sincerely,

John L. Wilson

Dear Commissioners,

I would like to voice my concern about the proposed changes to PSC pertaining to solar. I am very disappointed that these changes are even being proposed. As a consumer I have the right to chose how I want to supply my house with power. To be forced into a monopoly could not feel more wrong and absolutely infuriates me. Also economically it does not make sense to essentially shut down the solar industry. So many members of my family and friends are involved in the solar industry for work. This makes no sense and the general public will not stand for this neither will I.

Sincerely,

## Schedule 136

1 message

---

**Bob Speiser** <pinyonsmoke@gmail.com>

Tue, Nov 22, 2016 at 4:11 PM

To: psc@utah.gov

Cc: info@cesolar.com

To whom it may concern:

Rocky Mountain Power recently filed a request with the Public Service Commission (PSC) to change the rules and rates that apply to residential solar customers. I oppose this rate change and request the PSC to deny Schedule 136 and its related Schedule 5 tariff.

I believe the proposal, if approved, will add uncertainty to solar, reduce the financial return of home solar power systems by over half and also reduce motivation to conserve energy. We should be proud that in 2015 Utah had the nation's the 8th largest solar market. We have over 6000 solar homes and 92 solar businesses in the state supporting nearly 3,000 solar jobs. If approved, this proposal will apply the brakes to this engine of clean energy growth and establish a dark precedent for other utilities in Utah and surrounding areas.

I believe that we need to shift strongly to clean, renewable energy for two reasons that I feel are critical. (1) Global warming is real and must be minimized by eliminating fossil fuels as much as possible in the near-term future. (2) After initial costs, renewable energy is basically free, unlimited, and widely available. The positive consequences of that fact for our economy could lead to better jobs for many, and better lives for all of us.

I feel it's time to act based the larger picture, and stop subsidizing a fossil fuel economy that needs to be replaced.

Respectfully,  
Bob Speiser

## Docket #16-035-T14 Public Comment

1 message

---

DAN <dresserd4444@comcast.net>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 4:12 PM

Dear Commissioners,

I have been a Rocky Mountain Power (**RMP**) **customer for the past 16 years**, without complaint for the service and regular price increases in electric power over the years. Now I am a current solar customer of RMP since May of 2016 and have been enjoying the benefits of savings associated with the investment I have made in solar on my home to **reduce my kilowatt power consumption**, and am looking for a return on my investment over the next 15 years to pay for the solar systems. And as a degreed Industrial Engineer I feel that it was important that we reduce our carbon footprint through responsible implementation of green technologies.

***I am in direct opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016***, that would change the rate structure for rooftop solar customers. **I am suspicious of the short timeline for public comment and shortage of information for such a dramatic change in policy** that directly penalizes homeowners who like myself made the choice to go solar.

I would like encourage the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I have a number of reasons why I don't think this is fair and equitable and is representative of the power of the **monopoly that RMP has over us as power customers**.

1. RMP **does benefit directly from the power generated by my system**, especially during the peak summer season when my system adds power into the grid to **reduce the occurrence of "Brown Outs"** that have plagued the system during periods of high power consumption associated with summer heat and the use of A/C systems.
2. RMP should not be allowed to unreasonably raise the rates costs rooftop solar customers, **without warning and outside the normal rate-making processes** in place for all other rate increases.
3. We are **already penalized at the end May each year** for any energy credits that we have built adding free energy to the grid that RMP is not paying to generate, when they erase and zero out of credits and we have to start new each June.
4. I resent RMP's effort to restrict free trade, and **destroy the relatively new solar energy industry in Utah** which will virtually eliminate the jobs, revenue and taxes that impact the State of Utah, while RMP gouges solar households. The similar actions in our neighboring state Nevada proves how these actions can kill the solar industry with its associated jobs and economic benefits to the State of Utah economy and tax base.
5. Although RMP is offering access to clean & efficient solar energy through their own solar farms that is not a way we can reduce our use of RMP kilowatt hours, customers of RMP generated Solar power services pay the same rates for that energy as power generated by other power

generation technologies like coal and wind. This further diminishes our opportunity to experience savings and **disincentivizes us to seek clean energy alternatives that make a free contribution of energy to the RMP grid that helps cover the cost of the connection to and infrastructure of the RMP Grid.**

6. I as a RMP customer still pay for the power I purchase from RMP at the same rates as all RMP customers, and don't feel like I should be singled out and punished for reducing that amount of energy. **The petroleum companies cannot charge their individual consumers an additional fee if a gasoline consumer chooses to sell their big V8 Chevy pickup truck to buy a Toyota Prius hybrid that uses considerably less gasoline, why should RMP be able to impose a penalty to customers who use less kilowatts each month? How is that fair?**

**I personally want to thank you, the Commissioners collectively for accepting public comment. *I still believe the public comment deadline should be extended.***

I Respectfully ask that for the benefit and interests of RMP solar ratepayers and the Utah public, to **reject PacifiCorp-RMP's rushed rate change request.**

Regards,

**Kristy Woodward** <gkwoodward@gmail.com>

Tue, Nov 22, 2016 at 4:12 PM

To: psc@utah.gov

Dear Commissioners;

I am opposed to Rocky Mountain Power's Advice No. 16-13 filed Nov. 9, 2016. I would urge you to suspend the tariff so that it doesn't take effect on December 9th and require RMP to use the normal process to make changes.

I feel that this measure is restricting my ability to consider rooftop solar, and it will severely curtail the ability of consumers to choose Solar Power in Utah. This is what has happened in other states that have allowed similar measures. Solar Power is an important part of our future in clean, renewable energy. I understand the need to maintain the grid, but this needs to be considered carefully, not rushed into as RMP is attempting to do.

Thank you for allowing me to comment. Please reject PacificCorp-RMP's rate change request.

Respectfully,  
Gary Woodward  
Centerville, UT

**Ron Smith** <ronsmithalaska@gmail.com>

Tue, Nov 22, 2016 at 4:14 PM

To: psc@utah.gov

Dear Commissioners,

I want my voice heard that I'm strongly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. Do not let it take place on December 9. This seems like an unproductive, slow to adapt monopoly that is just trying to protect itself and this isn't in the best interests of the citizens of Utah.

I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,  
Ronald J. Smith

**Brent & Sheridan Mietzner** <mietzner@me.com>

Tue, Nov 22, 2016 at 4:15 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to inform you that I strongly oppose PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I am asking that the Public Service Commission suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

Free trade and clean energy are important to the infrastructure for the state of Utah. As a concerned citizen for the limitations the current power supply offers, solar is a resource that should not be limited and quashed. I, as a solar user made the choice to help the current power issues by putting solar panels on my house. I have encouraged others around me to also do this to help our power needs. This proposal negatively impact me and my neighbors.

Thank you for accepting public input, though I strongly believe the deadline should be extended. Please, in the interests of ratepayers and the Utah public, i urge you to to reject PacifiCorp-RMP's current rate change request.

Tue, Nov 22, 2016 at 4:16 PM

Dear Commissioners -

I am extremely disappointed to learn that you are only allowing a short comment period for PacifiCorp - Rocky Mountain Power's Advice No. 16-13, filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. This seems like a 'done deal' and that you are trying to push something through without hearing from the majority of taxpayers you serve and are charged with protecting from unwarranted or poor options for implementing rate hikes.

Please suspend the tariff and DO NOT let it take effect on 12/9/2016. The normal rate making process should be used and proper consideration given to strategically incentivizing solar vs. greatly increasing the ROI of new solar installations. This does not make good overall 'business sense' except for BerkshireHathaway.

There are many reasons to step back, slow down and require RMP to offer other solutions. My reasons follow.

1. Our air is filthy with significant impact on young children, the elderly, and people with certain chronic diseases, AND those of us who spend a lot of time outdoors no matter what time of year it is. I'm sick of breathing crappy air that burns my eyes and throat. We need to do everything we can to motivate actions for cleaner air, one of which is avoiding disincentives to invest in clean and renewable options.
2. Rocky Mountain Power most likely has not really looked for a way to spread its infrastructure overhead across current electricity users with perhaps a minimal tariff on new solar installations. I do not have solar at my home, and if a rate hike is needed, the ones not investing in solar should pay a bit more, including me. A small charge for accessing the infrastructure may be appropriate for new solar installs, but not at the level of disincentive to invest.

Thank you for accepting public input but unless you extend the public comment period, the public will know that a backroom deal was done instead taking a strategic approach.

Please reject the upcoming rate change until RMP publicly discloses the options it reviewed with thorough analysis through the normal process.

Regards,

Susan Marks

**Bryan Jackson** <b.jackson@solcius.com>

Tue, Nov 22, 2016 at 4:16 PM

To: psc@utah.gov

To Whom it May Concern,

A good decision should be based on sound information. Any potential solar consumer after Dec 9<sup>th</sup>, will not have the information necessary to execute a residential solar project because of the imposed NEM ambiguity with 135A. I firmly believe that this will have the negative impact of halting solar activity in Utah, thereby eliminating jobs, eliminating consumer choice and environmental benefits. Therefore I ask that 16-035-T14 have no further consideration.

Thank you,

**Kristina Roberts** <kristinafolaumoeloa@gmail.com>

Tue, Nov 22, 2016 at 4:17 PM

To: psc@utah.gov

I am very concerned with the monopoly power the Rocky Mountain Power wields in our communities. I want all of us to have a choice with regards to electricity. Rates have gone up and astounding 6% on average over the last 15 years. That is not fair to the people of this valley. Competition from solar and other renewables will help keep prices in check.

Rocky Mountain's proposed rate change is slated for December 9<sup>th</sup>. Even though the decision will be delayed till mid-2017, that date will be disastrous to the solar industry because at that point, customers will be unable to understand their choice until the Commission sets the rates. So, informed customers will see massive risk to going solar between December 9<sup>th</sup> and when the final decision is reached.

This is not at all fair to customers as it removes their ability to make an informed decision about switching to solar for the next 8 months until the final decision is made. That will kill solar in Utah for that timeframe. They should make a decision about solar when they have the data to do so, not when RMP have put a retroactive date in place to prevent customers from making informed decisions.

Sincerely,

Kristina Folaumoeloa

Tue, Nov 22, 2016 at 4:19 PM

Dear Commissioners,

I am opposed to the implementation of PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. PacifiCorp-RMP should use the normal rate-making process for any of its proposed changes.

As a regulated Monopoly RMP has the ability to set rates to provide an adequate return on investment, assets and equity. This is already in the rate base. As a regulator you must weigh the public good in our circumstances. Solar power is one of Utah's best natural assets. We live in high mountain desert blessed with sunshine. Solar power is strategic to Utah and strategic to the US in reducing our dependence on foreign oil. We need to keep a healthy Solar industry. RMP will get its adequate returns on investment through its regulated monopoly.

I understand that there is a cost to be connected to the grid. I'm willing to pay for that benefit. RMP should separate its bill into generation costs and transmission costs. That way all who are connected to the grid share the transmission costs and those who use the power from the grid will pay the generation costs.

Please do NOT effectively kill the Solar industry as it was killed in Nevada. Solar power should be a meaningful part of our power generation in states where we have lots of sunshine. Battery technology is coming down in cost and growing in performance, so in a few years we will be able to bridge to the peak usage times from the solar peak generation times. Please be forward looking and see "where the puck is headed."

Thank you for your consideration.

**Kristina Roberts** <kroberts@solcius.com>

Tue, Nov 22, 2016 at 4:19 PM

To: psc@utah.gov

Hello!

I work for a solar company. I was so excited when I got this job because I realized I could take part in protecting the environment and improving our future. When I see the air quality in the valley, especially in the summer months, I realize, we need to make changes. And, I'm doing my part to help make things better.

Rocky Mountain Power's proposed rate change will not allow customers to understand their choice until a decision is reached by the Commission. So, customers will be nervous to go solar after December 9<sup>th</sup>, until after the final decision is reached. This is a tricky and deceitful, move by Rocky Mountain Power as it removes the ability of any new solar customers to make an informed decision about switching to solar for the next 8 months until the final decision is made.

I agree that the Commission needs to address the issue of rates for solar, but, please let potential customers know that their rates will stay intact for the foreseeable future. Planning to make the rates retroactive to December 9<sup>th</sup> once the final decision is made will significantly affect the solar industry on December 9<sup>th</sup>. Customers will be frightened by the drastic and obtuse rate changes in the proposal which, in my opinion, will be extremely reduced or done away with sometime next year.

**Bryan Sylvester** <bryansly82@gmail.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 4:20 PM

To whom It may concern:

I am extremely troubled about the new Rocky Mountain Power proposals being considered to with regards to residential solar. I have been following articles from several of the Utah news outlets since the proposal was announced. Everything I have read creates fear of the Dec 9 date. This is particularly concerning to me right now, as I am scheduled to have a PV system installed on my home. Had I known about this proposal earlier, I would have considered waiting until August to understand the real impact of what is being proposed. At this point, I cannot cancel my installation, and quite frankly, I am concerned moving forward. The proposed fees and rate increases are unfair to me as a customer, as I have no choice besides solar and RMP. I want freedom of choice and want to make financial decisions that are good for my family, for both the short-term and the long-term. My wife and I ask that at the VERY LEAST, you honor the current net metering plan until August, so I may move forward with my solar project.

As a "Public Service" we respectfully request that you please not kill competition when it comes to energy, but especially CLEAN and AFFORDABLE energy. I have begun following the recent events that regarding power generation, the public impact, and most importantly RMP role. It is clear that RMP has a goal of doing away with residential solar. I understand that they are a business, and in it for money. I do not fault them for that, but when no choice is available, and a company is allowed to make their own rules, nobody but that company benefits. By taking away choice for me, the homeowner, who wants to go solar for financial and environmental reasons, RMP is the sole entity that must be relied upon. Air quality along the Wasatch Front is terrible. Why should anyone be allowed to stymie efforts to improve the standard of living for not only their own household, but for everyone of our neighbors? Some may say that most of the pollution is caused by cars and industry, much of it can be traced back to power generation in petroleum-burning power plants. Everything we do to clean up our air matters. As members of the public service commission, please ensure that the interests of everyone be taken into account, not just that of RMP.

Another important aspect of renewable energy in Utah is the economic benefit of jobs in the industry. I am worried that our economy will suffer as a result of loss of jobs if solar is no longer affordable. And finally, one of the claims that I have seen from RMP during all of this is that too many people are going solar, and they are losing customers. I see this claim as a wholesale misrepresentation of the facts. Our state is the fastest growing state in the nation. Far more people are moving in, and the number of households are increasing. By extension, RMP is gaining customers at a fast clip. Without having the numbers in front of me, I would be willing to bet that more new households sign up for RMP each year than go solar. Even with the popularity of solar rising, there is no way it outpaces new growth for RMP. As I see it, solar production actually helps RMP during the time of year and day when they have the most demand as well. Even if they are "storing" my power, they still sell it to other customers at a higher rate than they buy it from me. How is this not beneficial to RMP?

Thank you for your time and consideration. I trust that you will make the right decision.

Bryan and Tracy Sylvester

## Net metering policy, Docket 14-035-114

1 message

---

**Daniel Stevens** <daniel@elementscapitalgroup.com>

Tue, Nov 22, 2016 at 2:08 PM

To: PSC@utah.gov

I m extremely concerned and disappointed that RMP is trying to destroy solar in Utah as we know it. They are threatened by a clean alternative to energy? Docket 14-035-114 must not be allowed to pass. I have a right to decide who I want to purchase my energy from. They cannot monopolize that resource, it is simply un-American to do so. Competition in the marketplace breeds success, and ultimately is better for the consumer because parties have to put their best options forward. I am adamantly apposed to Rocky Mountain Power's Net Metering Proposal (Docket 14-035-114), my friends and family will be voicing their displeasure also.

## I want Solar Panels

1 message

---

**Spencer Cannon** <spencer.cannon@formax.us>

Tue, Nov 22, 2016 at 2:11 PM

To: psc@utah.gov

To whom it may concern.

I am appalled to hear RMP may be infringing upon our rights as citizens to produce our own electrical power through alternative methods, such as Solar Panels.

This is archaic thinking...It is fear based behavior demonstrated among a very few rich powerful groups trying to deny the rest of us the ability to cut costs, save the planet and become independent.

I just spent 60K on a new set of panels on my roof...If laws change where I can't see the full benefit of that investment, I will be joining others in a class action suit.

Am I missing something here? I understand there is a electrical Grid (that I will continue to use) that needs to be paid for, but denying the right to solar panels is the wrong way of solving this.

Concerned,

Spence Cannon

I am writing to express my opposition to the proposed changes by Rocky Mountain Power. In the spirit of transparency I work with an industry that is aligned with the growing solar industry, our company facilitates financing for residential and commercial solar projects. In fact I moved from Florida for the opportunity to work in this industry in Utah. I have witnessed first hand the growth of this industry in Utah as over the last 12 months alone the number of companies in the solar industry has more than doubled. In the last 18 months I have watched as our company has grown by 300% and the solar companies we work with in Utah and Idaho have seen tremendous growth as well. The community bank we work with in Utah has more than tripled the size of their staff focused on solar loans as well. All of this growth bodes well for not only the economic outlook but the outlook for cleaner air. At a time when the movement to cleaner energy has gained some real momentum, please don't allow Rocky Mountain Power to put a damper on this bright future. Rocky Mountain Power most of all should not have such influence on the future of the environment, 77% of their fuel comes from coal and is one the major contributors to the challenge of pollution in this beautiful valley that I and my family have chosen for our home.

thank you

Tue, Nov 22, 2016 at 2:23 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Public Service Commission

Please don't fall victim to a large corporations efforts to increase their profit margin at the expense of its clients. I have made a large investment in solar after researching the variables that determine the pay back on that investment. If you allow this increase which will be @ 300% in my case, it will double the pay back period. I'm sure there are many many other Rocky Mountain Power clients with the same situation.

The size of the increase and the short comment period during the holiday season makes this request highly suspect.

Tue, Nov 22, 2016 at 2:24 PM

To whom it may concern,

I am writing I regards to Docket 14-035-114 Net Metering Policy Proposal and how this will be a great devastation to my job, my state, and my freedoms. I went to school to be in the solar industry here in Utah with the hope that as a community we could change the air quality for our future generations. Solar is not only passion but it is also how I, and thousands of others, support their families. If this docket were to pass thousands of Utahan's would be out of work. Lastly, as American citizens it is our right to have a choice. I choose Solar. It makes sense financially and environmentally. Please do not allow RMP to disrupt the beauty of Solar Power here in our beautiful state.

Sincerely,

**Alex Paul**

**Franz Johansson** <franz.johansson@auricsolar.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 2:29 PM

Dear PSC,

You know the right decision to make in regards to docket [14-035-114](#). If this goes through, thousands of jobs will be eliminated and a booming industry in your state will be sunk. Big power companies need no help. They are doing just fine on their own.

This is bad for air quality.

Bad for business

Bad for progression

Bad for the state.

My wife and I both work in the solar industry, and our family will literally not be able to eat if this goes through. More than that, it's wrong to make people not have a choice on how to generate power.

Please do the right thing and do away with this.  
Thank you.

## Recent Higher Court Ruling would overturn RMP's request for Selective rates

1 message

---

**David West** <davidwilfordwest@gmail.com>  
To: Psc@utah.gov

Tue, Nov 22, 2016 at 2:36 PM

Dear PSC Members,

Please keep in mind the legal precedence set by the federal appeals court recently when Comcast and other internet (network) providers tried to obtain authority to selectively charge some customers a higher rate than others, it was overruled.

### Higher Court ruling on Neutrality of a Public Utility - Article in Chicago tribune

<http://www.chicagotribune.com/bluesky/technology/ct-net-neutrality-ruling-20160614-story.html>

The court ruled that "the FCC was justified in reclassifying broadband as a... utility" —*Chicago Tribune, June 14, 2016*

Please note that since the court ruled that broadband access is a public utility, and as such, Comcast and other "pipeline" providers could NOT selectively charge some customers MORE than others for the same bandwidth. This is called "net neutrality." This attempt to charge some customers more for the same bandwidth was particularly noted to be an effort by the pipeline provider to discourage competition by other content providers such as Netflix.

This is remarkably similar and to the Utah energy utility provider RMP, and their request to charge some customers more for the same access access to a public utility, the grid and must be interpreted as an attempt to discourage competition and exploit the public trust as a utility. After all, the grid is also a network that simply delivers energy as a necessary monopoly of an energy "pipeline."

A ruling by the PSC in this current matter granting RMP rights to apply selective fees to some customers would directly contradict the higher courts ruling of equal access to a public utility and would likely be overturned by a legal challenge using the legal precedence noted above.

Key reasons RMP's request to selectively charge customers with Solar more than non-solar customers

1. pricing neutrality (charging all customers the same access fee)
2. anti-trust (adding additional fees to prevent alternative or competitive companies from delivering energy)

## Opposed to RMP Proposal

1 message

---

**Lacey Pitcher** <pitcherlacey@icloud.com>

Tue, Nov 22, 2016 at 2:45 PM

To: psc@utah.gov

Dear Public Service Commission of Utah-

I was born and raised in Utah. I live in Smithfield and am raising my family here. I love our state. I have a young family. I want them to see all the beauty that our state, nation and world hold. If we do not act now and start being responsible stewards of resources and our climate there will be nothing but pollution and limited, unaffordable resources left.

Please do not approve RMP's proposal. It will ruin the solar options our state currently enjoys. It will deter future families from making those important investments in renewable energy and our children's' futures. It will disrupt the lives of all the families that depend on that industry for their livelihood. It will disrupt my family.

We have solar on our home. My husband works in this field. This will directly impact me, my husband and my family. Please. Do not approve their proposal. Make RMP go through a fair process to pass legislation and have participation from appropriate entities. Please do not allow them to sneak this in without discussion and review and dissent.

Please let us, let me, know that you love our state. That you care about our great state of Utah and want to show the nation that renewables are not the enemy. That we can embrace the future and make it work for everyone.

Earnestly-

Lacey Pitcher

## Reject Rocky Mountain Power's proposed net metering changes

1 message

---

**Ted Percival** <ted.percival@gmail.com>

Tue, Nov 22, 2016 at 2:47 PM

To: psc@utah.gov

I'd like to register my concern and disgust at Rocky Mountain Power's abuse of their monopoly position in its proposed changes to net metering tariffs & service fees.

Rocky Mountain Power, as a for-profit company is attempting to use its monopoly position to extort exorbitant fees from power-producing net metering customers. The existing net metering agreement is *already* one-sided to the company's benefit.

Peak solar PV production already aligns extremely closely with peak demand. The peak demand time is 1-8 PM in Summer[1] and peak solar production is from 9 AM to 8 PM in Summer. Homes like mine with a moderate 10 kW solar PV array contribute enough to power my own home and several neighbors' during peak times, when the cost of electricity is highest. We then use some of our net metering credits in the off-peak hours (ie. overnight) when electricity is at its cheapest. Rocky Mountain Power is already benefiting from the margin between peak and off-peak wholesale electricity costs. Every resident with rooftop solar is being taken advantage of in this way.

In addition, the existing agreement already prevents customers from receiving fair payment for their net excess contribution to the grid (ie. overproduction) when RMP annuls any accrued credits in Spring each year. This means that as a Rocky Mountain Power customer under the *existing* net metering agreement, I am already *subsidizing the company* with my rooftop solar array.

The company argues that there are fixed costs associated with power delivery, which is true, and they already charge a significant basic service fee of around 10% of the average residential power bill. However they *never* consider the profits they make on time-of-day variations on wholesale electricity prices. Nor do they include the hundreds of thousands of kWh of excess power that they book for free from all the customers with excess production when credits expire. Even the time of year that credits expire is predatory, as customers' credit kWh are annulled immediately before peak season.

In the company's repeated proposals to suck money from environmentally-conscious Utahns they have *never* considered the difference in wholesale electricity costs that they benefit from. Rooftop solar is already saving the company money but they are trying to reach even further into the pocket of residents to increase the company's profits.

The proposed net metering changes reach unfathomably far beyond reasonable. They intend to kill the rooftop solar industry in Utah as they have done in Nevada, opting instead to push customers into purchasing from Rocky Mountain Power-owned sources.

If there is to be a change in rates to net metering customers, it *must* be based entirely on the *Utah Public Service Commission's* assessment. There is too much money behind Rocky Mountain Power's monopoly to consider *any* of their calculations as reasonable. They will only ever include the figures that make them appear to be a victim. They will only ever propose rate changes that increase their profits.

In support of clean air and a healthy environment for all the residents of Utah, Rocky Mountain Power must not be allowed to set their own prices and pocket the profits from electricity generated by their customers. Utah needs a true public power utility with the needs of the people, rather than a monopoly that answers only to its shareholders and whose goal above all else is profit.

I urge you to decline Rocky Mountain Power's latest attempt to extract money from net metering customers.

We all prefer clean, clear air, and individually owned residential rooftop solar is the best way to ensure a livable state in the years to come.

Please protect rooftop solar. Reject Rocky Mountain Power's proposal.

Ted Percival  
209 W 1390 N  
Orem UT 84057

[1] RMP's time-of-day metering's peak charge is from 1-8 PM in the Summer months.

**James Moody** <james.moody@auricsolar.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 2:48 PM

To whom it may concern:

I wanted to reach out to the Public Service Commission and voice my concern over the latest Rocky Mountain Power rate change proposal. My concerns mainly lie with the notion that they are working to eliminate the choice on how an individual receives their power. I feel that as a citizen of the great state of Utah I deserve the choice to decide what is best for my family, and if the solar industry can offer something that I deem better than I should be able to make that choice. I firmly believe that it is in the best interest of the state to not allow Rocky Mountain Power to dictate the future of the solar industry. I hope that the voice of the people is heard in this case, and that the PSC makes the decision that will benefit the people of Utah for generations to come. SAVE UTAH SOLAR!

Yours,

**James Moody**

To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 2:49 PM

To whom it may concern.

Letting Pacific Corp put an end to rooftop power generation is environmentally unsound but also allows them to continue as a monopoly to keep gouging the public with more expensive power. They should get compensated for their infrastructure but the power that is generated by solar and the minimum amount of \$9.01 that is charged should help compensate for not using power that is generated by coal or any other polluting fuel.

Consider all the ramifications such as restraint of trade and all other unfair practices of a monopoly.

To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 2:56 PM

To whom it may concern,

Solar is the future of energy production, providing jobs and keeping a healthy economy. I am emailing regarding docket 14-035-114. Thousands of employees work in the industry, paying taxes and providing for their families. The new charges for Rocky Mountain Power to charge solar and current customers will hurt the industry. I see it as greedy, and a hope to keep more control over a once a monopoly on power production in Utah. Please hear my voice and the voice of others in protest over this monopoly. Utah home owners should be able to choose how they get their power, and help their future by getting rid of a utility bill by creating their own energy. Solar is only good for Utah's economy, with a bright future ahead, only if the industry is protected by these conglomerates. Please, Don't allow Rocky Mountain Power to hurt the Solar Industry.

Sincerely,

-Justin Beck

## Rocky mountain proposal on net metering

1 message

---

**Chad Patten** <chad.patten@ccbankutah.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 3:01 PM

Hi,

I would like to chime in about Rocky Mountain Powers net metering proposal **Docket 14-035-114.**

I would hope that the commission will take into consideration that by approving Rocky Mountain Power's (RMP) proposal that the viability of residential solar energy would die in Utah.

Their proposal on the metering agreement would make consumers choice to go solar, and try to do their part about helping the environment a moot point. Consumers are wanting to help reduce the demand on the local power grid and reduce their personal consumption of power in exchange for the HIGH personal costs to themselves by purchasing and installing solar panels. However, the giant monopoly Rocky Mountain Power's proposal will make this option for consumers extremely not affordable. Consumers are willing to take on that large expense to them now in exchange for less personal energy bills over time to help the "GRID" and the environment. This proposal will kill that.

It was not so long ago that we were experiencing brown-outs though out the Utah energy GRID. Consumers have stood up to help do their part to reduce demand on the grid, as well as reduce carbon emissions, now the "GIANT MONOPOLY" wants to crush them and the solar imitative in Utah. The Solar initiative has brought lots of jobs to Utah, and is one of the fastest growing industries in Utah today. Granting RMP their proposal will make the Solar initiative totally cost prohibitive. There will not be any future power saving available to consumers. Without those future savings, the consumers WILL NEVER MAKE THE EXPENDITURES to install solar systems. Thus solar in Utah will be a WORTHLESS venture.

Please take into consideration as you analyze this proposal the people that will be displaced from employment. The people that are involved in the Solar initiative that are in sales, installation, financing, and product suppliers will be put out of work by the hungry "GIANT MONOPOLY" RMP. Please "read between the lines" when considering RMP's cost analysis'.

They are most certainly a biased report to support their proposal. At a minimum, and independent study should be commissioned to analyze the effects.

Lastly, consumers should have the right to be able to choose where they want to spend their energy dollars, and not be dictated to by the "GIANT MONOPOLY" RMP.

Best,

## Rocky Mountain Power

1 message

---

**Kate Monson** <monson.7@gmail.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 3:03 PM

Dear Public Service Commissioners:

I am writing to ask you to reject Rocky Mountain Power's (RMP) current request to assess new fees to metering costumers.

There claim that, "solar generation does not coincide with the Company's peak load, thus only minimally reducing that load" seems clearly illogical.

Peak production for them would be in the Summer seasons when people are using AC heavily, they are using AC heavily because the sun is out. Which is when solar generation is at it's max. Even if they didn't completely coordinate, we live in Utah, the sun is pretty much always out, even in the Winter. The fallacy of a statement leads me to believe that they are clearly only interested in taking away energy choices and monopolizing the market rather than letting citizens make their own informed choices.

Not to mention that, excess power from net metering customers can typically be transported to a nearby customer, unlike power from RMP's power plants that travels hundreds of miles. This means that when using net metering it reduces the need for costly and inefficient infrastructure

Net metering customers should not be punished for reducing the power load at peak demand, if anything they should be rewarded for it.

The three-part rate structure RMP proposed is intended to make investing in photovoltaic solar so costly that residents would have to pay significantly more for solar than to utilize RMP's coal-generated power.

Because RMP's corporate hierarchy also includes coal mining and distribution, this request appears to be aimed at protecting the supply chain of their existing monopoly, rather than doing what's right for customers and communities.

Recognizing a long-term need for cleaner, sustainable energy, Federal and State legislators have for several years offered tax incentives to make solar more affordable. RMP's proposed rate structure would effectively funnel all these subsidies (and more) back into their own business, which is heavily dependent on pollutive coal technology, further damaging Utah's already poor air quality.

Please reject their request, and protect the rights of Utah residents to invest in sustainable energy.

Sincerely,

Kate Monson

Concerned Orem resident.

## RMP TAX on solar

1 message

---

**alhanes71** <alhanes71@gmail.com>  
To: PSC@utah.gov

Tue, Nov 22, 2016 at 3:02 PM

To Whom It May Concern,

I can't believe that this body is considering this additional tax that Rocky Mountain Power is trying to push (strong arm would be a more appropriate term) through. This additional tax no matter what RMP says, is going to kill the solar industry in Utah they same way it killed it in Nevada. We have a new industry in Utah that now employees thousands of PEOPLE who pay taxes on their wages, pay mortgages with their wages, pay car payments, raise families on their wages that will all disappear if this is approved by this body. If this happens these thousands of PEOPLE will be suddenly unemployed and collecting unemployment. The intentional effects of this tax will be felt throughout Utah's economy to satisfy a corporate monopolies greed. There should be no need at this time for this Public Service Commission to destroy any entire industry without first further considering it's far reaching effects.

Sincerely,

AL Hanes

## Pacific Corp-- solar

1 message

---

**Kate Starling** <katestarling@infowest.com>

Tue, Nov 22, 2016 at 3:09 PM

To: psc@utah.gov

Please do not allow Pacificcorp to destroy solar energy in Utah as they have in Nevada. The extreme rate increase being ask for has one purpose which is to eliminate the financial advantage of solar energy.

Those of us who have invested in solar did so using an investment matrix identifying a payback time period. The extreme rate increase Pacificcorp is requesting will double that time period.

I brought roof top solar to my home at great expense so I could do my part to help our environment in the knowledge that I would eventually be payed back in the long run. This new action by Pacific Corp will negate my efforts. Please don't let this huge corporation hinder the solar industry.

Sincerely,

Kate Starling

Dear Sir,

I am troubled by the recent newspaper report concerning revisions to the kWh rate increase plus installation surcharge proposed for homeowners who are purchasing solar panels for their homes.

I do not object to being charged for usage of power which includes the costs associated with their infrastructure and generating costs, as that is fair and reasonable. Those infrastructure, future power plant expansion, and maintenance costs are currently included in the kWh bill for electricity used. This leads to my second issue, which is why would there be an increased cost for homeowners generating solar be different from a normal homeowner? Aren't they using the same number of kW? I do object to a higher cost for homeowner solar generators on the grounds that the homeowner has his own infrastructure investment and maintenance that he is solely footing the bill for.

My third objection is that I may have to pay an installation surcharge for the connection to a Rocky Mt. Power meter. The meter is installed to Rocky Mountain's requirements and they should be responsible for service of it including replacement costs. My understanding is that the homeowner is responsible for wiring and upgrades after the meter, not before.

What I see as the missing factor in the rationale for the proposed increase in the Rocky Mt. fee is the investment cost and maintenance which the homeowner has made and will continue to make for adding power to the Rocky Mountain grid system. I'm sure Rocky Mountain spreads out the cost of a new power plant over decades (and is currently charging us in our monthly bill), so why is the homeowner's investment ignored?

Regards,

Kyle Brazell

Tue, Nov 22, 2016 at 3:13 PM

To Whom It May Cencern,

Rocky Mountain Power should not be able to change the rate calculation for solar residents in Utah. This is wrong for so many reasons. It will take away the incentive for residents in Utah to make the investment in solar for their home which benefits everyone by avoiding CO2 emissions into the air from burning coal resulting in cleaner air. That means you, your spouse, your kids and your grandkids. You should care about this, it affects us all!

Rocky Mountain Power obviously supports solar power because they offer residents the option to buy solar from them allowing Rocky Mountain Power to charge and set the price. I don't think Rocky Mountain Power told the PSC they are passing the cost on to non-solar residents for the loss of revenue from solar residents calling it a "Subsidy". This is on Rocky Mountain Power's website. Like any business that is concerned with the "bottom line", a better idea is to change with the times. People are concerned about the green house gases, the environment and global warming. Instead of protecting their wallet and profits, they need to get on board with doing the right thing instead of have money be the deciding factor or become obsolete and go out of business.

Years ago there was a company called Kodak and had a advertising slogan "A Kodak Moment". Kodak did not change with the times and changing technology. They kept doing business the same way by focusing on camera film and development. Meanwhile, other companies changed with the times and went to digital cameras, etc. and are still in business today. If Rocky Mountain Power can't get on board and help people convert to solar power instead of keeping a monopoly on the electrical market, they should go out of business.

Like any business, Rocky Mountain Power doesn't like losing revenue. The Subsidy and the rate calculation change is their way to stop losing revenue at the expense of the environment and taking away the incentive for residents making it less financially attractive. If the new rate calculation is approved, it will deter residents from going to solar power.

I want the PSC to do the right thing and deny Rocky Mountain Power's request for the new rate calculation for solar residents.

Thank you,  
Kim Casper

Tue, Nov 22, 2016 at 3:14 PM

To whom it may concern,

My name is Meagan Scott and I am contacting you regarding the Net Metering policy proposed by Rocky Mountain Power. **I AM ADAMANTLY AGAINST THIS PROPOSED ACTION.** This proposal is bad for air quality, bad for consumers and bad for business.

To support a move like this from Rocky Mountain Power is to support a monopoly of power and greed. We have all seen the outcome of power companies trying to monopolize or kill the solar industry with the example of Nevada. This proposed rate would hurt the economy, job growth, and established consumers of solar in Utah.

Every day I talk about how much I love my job. I love working for a company that is investing in the future of solar, investing in future economic success in Utah and in my own personal future. My life is better because of my job, and I know my job is a part of a positive impact on my community.

I implore you to make the right decision. The right decision is to side with better air quality in Salt Lake City. The right decision is to side with consumers that have invested in solar, and the ones who want to in the future. The right decision to protect my job and allow me to create career opportunities for others. Please help save the future of solar in Utah!

## Utah Solar Power

1 message

---

**Alex Trotter** <alex@ccbankutah.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 3:17 PM

To whom it may concern.

There are many benefits to solar that are obvious and important. It is a clean way to create power. Many jobs are being created and many families are sustained through the solar industry. Mine included. I fund solar loans to customers of Auric solar. I love what I do and enjoy this job. But that is not my problem with the proposed tax hikes from Rocky Mountain Power.

My problem is any government involvement in the matter. Any bill that stops solar power from expanding. Any government involvement that restricts capitalism and doesn't let solar expand is not a good thing and should be stopped.

I just want to make sure that no bills are passed that restrict Solar growing like it can in a free market.

Thanks,

*Alex Trotter*

## Commentary: Utah Solar in Jeopardy

1 message

---

**Thomas Eatchel** <tomeatchel@gmail.com>

Tue, Nov 22, 2016 at 3:19 PM

To: psc@utah.gov

To whom it may concern:

It seems that every time that I turn around there is legislation to make it not financially not viable to take conservation measures. Now RMP wants to purpose a 3 tier electric service rate which will diminish the return on investment for those who have bought solar panels, are in the process of buying them or for those who have plans to buy and install them. Those who use less of a utility should be charged less accordingly. To do anything less than that is not fair nor does it give incentive to those who have taken the initiative to provide their own power. RMP wants to be a controlling monopoly. I strongly encourage you as a governing body to not allow this to happen. Allow those who choose to preserve the planet by providing clean renewable energy for themselves to be rewarded. It's only fair. We live in highly polluted valleys in the winter and have hazy summers from all of the pollution produced from energy production. Lets leave the financial incentive on the table for those who are taking a stand to do something different. RMP will have plenty of new customers to replace others they are loosing with all of the new construction occurring presently. They will financially survive. Do not let their greed hurt those who have taken a stand to earn their independence from the grid in some measure to reap their anticipated reward. I do all in my power to reduce the pollution in the valleys by driving a vehicle that can run on CNG or gasoline. I use CNG whenever possible to reduce the pollution I put off. I work as a realtor and appraiser and drive over a thousand miles a week in the work I do so I'm sure it makes a difference especially since my work requires that I drive a large strong vehicle that can drive up steep mountain passes, reach remote offroad areas and carry clients and their families. I drive a Suburban so I'm sure having it on CNG makes a huge difference in emissions within the state. I do what I can to reduce the pollution I produce both with my vehicle and my house. It needs to remain financially viable to do so on all fronts including electric power production for residential use. Be intelligent and thwart RMP's attempt to do what they are with this 3 tired billing system which will diminish the financial viability of the future of solar use in Utah.

To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 3:23 PM

Hello. In regards to the Net Metering Policy Proposal, I am reaching to out to voice my concern for the opportunities of jobs being a big issue if this is passed. I just joined Auric Solar 2 months ago and realized the solar industry is one of the fastest growing industries, if not the fastest, in the country. Many people will not only lose their jobs but future job growth will be stunted.

The public should also have a choice on where power comes from.....and not be tied to the current monopoly Rocky Mountain Power has people wrapped into. Solar is the future.....and it won't be stopped. It will only be delayed.

Please strike down this proposal and realize the right thing to do is for the people.

Thank you.

## proposed rate increase for roof-top solar

1 message

---

**John Bowman** <john.bowman@utah.edu>

Tue, Nov 22, 2016 at 3:27 PM

To: psc@utah.gov

Public Service Commission members:

I urge you to reject proposed increases to the cost of roof-top solar energy installations that are proposed by Rocky Mountain Power. These increases penalize consumers who wish to install roof-top solar and therefore undermine the economic and environmental benefits of expanding solar energy use for our state. You should value more the interests of consumers and the economic/environmental benefits to the state of Utah, as opposed to increasing the (already generous) profit margins of Rocky Mountain Power. You should also not be making decisions that abet their reluctance to adapt to the realities of climate change and technological changes in power generation.

More generally, you should be promoting expansion of solar and other renewable energy sources by individual citizens (e.g., roof-top solar) and local communities (community-operated and/or owned solar installations) rather than leaving this development to corporate interests that do not have the interests of consumers or the environment as high priority.

Sincerely,

John R. Bowman

---

**Kevin Meredith** <kevin.meredith05@gmail.com>

Tue, Nov 22, 2016 at 3:38 PM

To: PSC@utah.gov

To the Public Service Commission,

I wanted to reach out and express my displeasure and frustration at this proposal, as this would be crippling and punitive to a burgeoning industry that works for the greater good of the state of Utah. It would not only hurt many people with jobs in the area, but we are approaching the season in which air quality is a very tangible concern. Solar provides a cleaner, healthier alternative to the dirty power production currently espoused by Rocky Mountain Power. And finally, it's an attack on a basic liberty of home owners to have options for their power providers. Please understand that this is an especially punitive measure, and I hope that you hear the people on this issue.

Thank you for your time.

 **SchroederComment22Nov2016.pdf**  
158K

Date: 22 November 2016  
Subject: Docket #16-035-T14 Public Comment

Dear Commissioners,

I write regarding Rocky Mountain Power's Advice No. 16-13, filed November 9, 2016, proposing a new Schedule 135A for "Net Metering - Transition Service."

### **About me**

My name is Daniel V. Schroeder and I have been a Rocky Mountain Power customer since 1993. I have been a net-metering customer since August 2015. I consider myself knowledgeable about home electricity use and have monitored my own use through careful tracking of bills, meter readings, and the use of plug-in power meters. Since last year I have also monitored the production of my rooftop solar panels through the Enphase Envoy monitoring system, while also monitoring my electricity usage with an Efergy CT-style sensor and data-logging system. I therefore have a thorough understanding of my own household energy use over long time periods, and of my minute-by-minute power use at all times of day, during all seasons. I am also reasonably familiar with statistics on the growth of the photovoltaic industry on a regional, national, and world-wide scale. To establish my credentials, let me state that I hold a PhD in Physics from Stanford University (1990), and that I am a Professor of Physics at Weber State University. These comments are mine alone and do not represent the views of my employer or any other organization.

### **General remarks**

I have read the docket materials for this proposal, and also the recently filed materials for the related Docket 14-035-114, outlining the issues with continued growth of rooftop solar generation and net metering in Utah. While I do not have the resources to assess the details of Rocky Mountain Power's elaborate analysis of the costs and benefits of the net metering program, I would agree more generally that the current policies and rate structures that govern this program will not be sustainable over the long term.

Stepping back and looking at the big picture, it is clear that within about a decade, electrical grids throughout the southwestern U.S. will be flooded with solar-generated power whenever the sun is shining. This power will inevitably come from a mix of utility-scale solar farms and distributed rooftop systems—both of which have their advantages and disadvantages. Under these radically new conditions, electric utilities will need to provide incentives to all customers to shift their demand toward times of sunshine and away from times of darkness. Rocky Mountain Power (and other electric utilities throughout the region) need to proactively look ahead to the coming solar era and plan for a smooth transition that will minimize disruption to their customers.

It is equally clear, however, that the era of abundant daytime solar power has not yet arrived in Utah. According to the testimony filed with Docket 14-035-114, Rocky Mountain Power's Utah net metering customers are projected to number approximately 16,000 by the end of this year. That is only about two percent of all Rocky Mountain Power customers in Utah.

Similarly, the construction of utility-scale solar farms in Utah has lagged behind that in other southwestern states. Even in California, which has led the way in both rooftop and utility-scale solar development, solar generation still accounts for no more than about a third of all power on the grid at times of peak solar generation. A corresponding statistic for Utah does not seem to be readily available, but the percentage must surely be in the low single digits.

Thus, Rocky Mountain Power is not currently facing any kind of solar-caused emergency that would necessitate a moratorium on new solar development or any comparably disruptive action. There is still time to take a thoughtful, long-term approach to planning rate structures that will be appropriate for the coming solar era.

### **The current proposal**

The proposal before you at this time is to put all new net metering customers on notice that, within less than a year, they are likely to be transitioned to a rate schedule that is fundamentally different from the current one. (For simplicity I will focus only on residential net metering customers, who are by far the most numerous and for whom the proposed new schedule would be the most different.) This “transition” schedule (135A) would be extremely disruptive because it would completely invalidate the traditional cost-benefit analysis that homeowners conduct before investing thousands of dollars in a solar generation system (or before agreeing on a price when a home with an existing generation system is being sold to a new customer). Even a certain transition to the new proposed Schedule 136 (and the associated Schedule 5) would up-end that analysis; introducing uncertainty over whether Schedules 136 and 5 will eventually be adopted as proposed, or will be adopted in modified form or rejected entirely, is still more disruptive because the uncertainty makes a cost-benefit analysis impossible. The proposed Schedule 135A would therefore have essentially the same effect as a moratorium on new net-metering applications, with further impacts on home buyers and sellers. At this time there is no emergency that calls for such drastic action.

Let me now explain why the rate schedule proposed in Schedule 5 would (even if it were certain to be implemented) be so disruptive to customers who might be considering an investment in a new solar installation (or a home with an existing system). This analysis is relevant to the current proposal because if Schedule 135A is adopted at this time, then these customers will inevitably look to Schedule 5 as the best guess for what their rates would be over most of the lifetime of their generating systems.

Rocky Mountain Power has provided a “Monthly Bill Comparison” table as Exhibit RMP\_(JRS-7), submitted 9 November 2016, under Docket 14-035-114. Unfortunately, this table is incomplete in that it fails to show any data for customers who use less than 500 kWh per month. I have therefore downloaded and revised the table to include comparisons for usage levels as low as 100 kWh per month (which happens to be my own approximate usage level). My revised table is attached as the final page of these comments. I have also modified the rate calculation formulas to eliminate the rounding of the peak demand to the nearest kilowatt. This rounding produces confusingly abrupt variations in the displayed results, and is inappropriate in any case because the goal here is to show average billing amounts for a typical customer over many months—not the exact bill charged to any particular customer during any particular month. Aside from the elimination of this rounding, the formulas used

are identical to those in Exhibit RMP\_(JRS-7).

There are many notable features of the data in this table, but the most important thing to notice at this time is that for many customers whose usage levels are relatively low, the percentage change in the monthly bill upon installing a rooftop solar generating system would be *positive* (see the highlighted table entries). That is, these customers' bills would actually *increase* as a result of the installation, making the installation a financial liability rather than an asset. Keep in mind that this calculation does not even include the capital cost of the generating system, so even if a customer could acquire a generating system for free, there would be a long-term financial penalty for doing so. An important special case would be a customer who is selling a small solar-equipped home to another customer: even if the seller was eligible to stay on Schedule 135, the buyer would be forced onto Schedule 135A and would therefore consider the solar panels to be detrimental to the value of the home.

The situation for many low-use customers would actually be much worse than shown in the table, because the table calculates the peak demand charge of \$9.02/kW using a linearized model of customers' average on-peak demand. That is, the on-peak demand is assumed to be directly proportional to the total monthly energy usage, with a negative offset that is directly proportional to the size of the solar generating system. While the parameters of this linear model have apparently been carefully chosen to match data from an empirical study, the assumption of linearity almost certainly breaks down when the model is extrapolated to usage levels under 500 kWh/month. For example, at a usage of 100 kWh/month and 100 percent on-site energy generation, the model assumes a measured peak demand of only 0.33 kW, which would be extremely difficult for most homeowners to achieve. As noted above, my own monthly energy usage is approximately 100 kWh; yet my monthly on-peak demand, averaged over 60-minute time periods as called for in Schedule 5, is typically in the range of 1.0 to 1.5 kW. This is because I occasionally use an electric stovetop and oven to prepare evening meals. Even though cooking accounts for only about 10 percent of my total household electric energy use, it is responsible for nearly all of my peak demand. Similar numbers might apply to a homeowner who makes only occasional use of an electric space heater or a central air conditioning system. In any case, for such a homeowner the peak demand would typically be about a kilowatt greater than assumed in the table, so the monthly bill would be greater by about \$9.02 plus surcharges, and the percentage change from before the solar generation system was installed could in some cases exceed 100%. In other words, acquiring a solar generation system could result in a doubling of the customer's monthly electricity bills. Even for customers who use a few hundred kWh of energy per month, applying more realistic peak demand estimates can easily cause some of the negative "% Change" entries in the table to become positive.

This is not the time to get into a discussion of what would constitute a fair rate schedule for customers who use relatively low amounts of energy per month, or for customers with relatively low load factors. The point is simply that no customer's electricity bill should increase at all—let alone double—as a result of installing a solar generating system. It is inappropriately disruptive to even put customers on notice that such a rate change might apply to them in the near future. Any sensible rate schedule for customers with on-site generation would never cause their bills to increase and, in fact, should always reduce their bills by at least the value of the electricity that they are generating and using directly on-site.

The proposed Schedule 5 also has other problems, which I will address in future comments on Docket 14-035-114.

### **Recommendations**

I therefore recommend that the Public Service Commission reject the proposed Schedule 135A at this time. Similarly, the PSC should reject any other schedule or modification that would open up the future possibility of charging net metering customers *more* than they would be paying (under Schedule 1 or a future modification of it) if they had no on-site generation systems. I further recommend that any new net metering schedule guarantee that net metering customers will *never* pay more than they would otherwise pay, without net metering, for the actual electricity that they are taking from the grid. This constraint is extremely modest but absolutely fundamental to the logical consistency and fairness of Rocky Mountain Power's electricity rates. On top of this fundamental constraint, I would argue that net metering customers should be guaranteed compensation at fair wholesale value for the energy that they push onto the grid for their neighbors to use.

Because of the potentially disruptive effect of this proposal on Rocky Mountain Power's customers, including not only those contemplating installation of a new rooftop generation system but also buyers and sellers of homes that already have such systems, I respectfully ask that the comment period on this proposal be extended to allow interested parties to conduct further analysis and perhaps recommend feasible alternatives. As noted above, there is no "solar emergency" in Utah so there is ample time to take a more thoughtful and less disruptive approach.

Finally, I recommend that the Public Service Commission work with Rocky Mountain Power to begin revising rate schedules for *all* customers to reflect the coming reality of a grid that will be flooded with solar-generated power during the daytime hours. All rate schedules that distinguish between on-peak and off-peak times should be revised with updated definitions of the peak hours. Plans should be made to move more customers—perhaps all customers—onto time-of-day rate schedules. Only in the context of sensible rates for all customers will it be possible to address the issues associated with net metering in a fair and logical way.

Thank you for your consideration of these comments.

Sincerely,

Daniel V. Schroeder  
1444 Binford Street

## Auric Solar Owner Comments

1 message

---

**Jess Phillips** <jess.phillips@auricsolar.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 3:47 PM

On behalf of Auric Solar I would like to express to you that the PSC takes a very close look at what is being proposed by Rocky Mountain Power and takes into account the manner in which they are doing so. Obviously you have had plenty of feedback about the docket itself so I won't waste your time on that.

What I do want to highlight are the following facts:

- RMP went public with their proposal the same day as the election to hide the story from the public
- RMP has not attempted to work with any representatives from the solar industry to find something that can work for both sides
- RMP is trying to bypass the system that was put in place to regulate them

My conclusion is that they are not proud of the proposal and are uncomfortable with what they are asking or why would they handle themselves this way. We have other utilities around the country that have figured out how to work with the solar industry and both sides are seeing net gains as a result.

CEO of Tesla Elon Musk just commented on how the utilities will need to increase capacity by 67% in order to keep up with the demand that will come from moving transportation from fossil fuels to electricity. They are not going out of business because of roof top solar and will have a greater demand than ever before.

Unfortunately RMP has the highest percentage of coal burning power plants of any major utility in the Western U.S. so they have not shown a track record for progressive and more efficient thinking.

**We started Auric Solar with \$35,000 in capital in 2010 with 2 of us in a garage and have grown it to over 200 employees today. Our economy, health, and our overall transition to renewables rely on decisions such as this and we cannot afford to get in the way.**

**Allan Measom** <ameasom@solcius.com>

Tue, Nov 22, 2016 at 3:47 PM

To: PSC@utah.gov

To whom it may concern

I have begun following the recent events that regarding power generation, the public impact. It is obvious that RMP is wanting to kill residential solar to protect their own interests and revenue. That means taking away choice for me, the homeowner, who wants to go solar for financial and environmental reasons. The inversion in Utah is horrible, while you may say that most of this is cause by cars and industry, some can be attribute to power generation. On top of that the water wasted by Rocky Mountain Power to burn the coal that they are using is unsure, Anything counts. As members of the public service commission, please do not allow RMP to alter and weasel the rates and net metering.

Clean energy, clean jobs are at high risk. The newly proposed net metering changes from RMP require more public input than just an email. The residential solar industry is growing faster than any other job market, and now the Dec 9 date will cease solar sales, kill installation jobs, delay homeowner improvements, until the commission reviews and votes on the RMP new rates.

Thanks for your concern!

Allan Measom

## Upcoming solar proposal by RMP.

1 message

---

**Brad BAILEY** <baileybrad@mac.com>

Tue, Nov 22, 2016 at 3:49 PM

To: psc@utah.gov

To whom it may concern at the PSC.

The proposal by Rocky Mountain Power is a blatant money grab by a huge corporation at the expense of our environment and the economy.

Rooftop Solar means less dependence on fossil fuels. The burning of which contributes not only to our terrible air and inversion locally, but also to the emerging global climate change phenomena.

If we can produce clean energy locally, and contribute to the local economy by providing excellent jobs in the solar industry then we should strive to do so.

We already have an example of what the proposal provided by RMP does to solar industry. Nevada enacted a similar law and its rate of new solar installations plummeted, to the benefit of RMP's parent company. Nevada, like Utah, is in America's solar belt. It is sad to think of the public good that is being traded in the search for private profit.

We have a chance to make a difference and let this burgeoning industry expand and grow. This is especially important because of the new technology that is coming online from innovators such as Elon Musk.

I hope you have the foresight to allow the solar industry to grow and stand up to RMP for the good of our community.

Thank for your time.

## Docket 14-035-114 Net Metering Policy Proposal

1 message

---

**Cory Petersen** <cory.petersen@auricsolar.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 3:54 PM

To whom it may concern,

I just wanted to take a moment to speak out against the new Net Metering proposal. This thing is just bad news. It is ultimately bad for Utah, bad for the USA, and ironically bad for Rocky Mountain Power.

Utah constantly suffers from inversion issues and the adoption of solar and Ev automobiles are 2 key things that can help reduce that. They also drive each other. Solar customers are more likely to be Ev owners and vice versa.

The solar industry in Utah is currently employing over 2,500 people in our great state. These are good paying jobs that bring in great tax revenue for the state. These are also people that can afford to spend and further drive the economy.

Solar power also gives the people of Utah to chose. This is something that is incredibly important to our state which is founded on the principals of personal choice and accountability.

Utah is currently a leader in the US for solar growth. This shows the rest of the nation that we are leading the charge for a better, smarter future. Let's not go in reverse.

Lastly, solar power and choice are great for Rocky Mountain Power. One just has to look to the west by one state to see what these draconian measures can do. Last year at this time, Nevada Power was the main provider of electricity for the state and enjoyed a lucrative contract to provide those services. As of this month, the people of Nevada have voted to deregulate the power utility and have set into motion a chain of events that will cause huge disruptions as that transition takes place. Rocky Mountain Power is not immune from this kind of action, nor is Utah. An equitable solution for net metering is in the best interests of the Utility and the state.

It is my hope that the PSC will take the correct action and require a full rate case so as to avoid any unintended side effects. I trust that the PSC can see wisdom in this volatile issue.

Best wishes,

Cory Petersen

**Krystal Lowe** <knykelle1@gmail.com>

Tue, Nov 22, 2016 at 3:57 PM

To: psc@utah.gov

To whom it may concern,

I am wanting to voice my opinion on the docket 14-035-114 Net Metering Policy Proposal. This is a very unethical and unamerican proposal, it takes away consumers right to affordable clean energy, and would put thousands of Utahns out of work. It also effects Utahs already terrible air quality because it takes solar off the table for thousands of Utahns that want to make a difference on the environment and save money at the same time. I sincerely hope that all of the information and numbers are thoroughly thought through before any action is taken towards destroying a thriving industry for a major corporation to make a few extra dollars while destroying the environment in the process.

Sincerely,

-Krystal K.

**Kimberly Beck** <kimberlybeck2009@gmail.com>

Tue, Nov 22, 2016 at 3:57 PM

To: psc@utah.gov

To: Thad LeVar, David Clark, Jordan A. White

Thank you for your time.

I am writing you in regards to the save the solar petition. I wanted to voice my opinion against Rocky mountain powers proposal. Rocky mountain power has a monopoly on the power industry and it isn't right to try and increase the cost of electricity for people who want to power their homes with solar. Solar is good for the environment and by doing this they will dramatically take the opportunity for solar out of the reach of consumers who want to use solar for their electricity.

They should not have so much control. If this passes there will be a lot of people's jobs lost and several families going without a paycheck. Please don't let Rocky mountain powers proposal pass it will not be good for the environment! And it takes choice away from people.

Thank you for your time

Kimberly beck

---

**John Hart** <john@hartsonline.com>  
To: PSC@utah.gov

Tue, Nov 22, 2016 at 4:00 PM

As a resident of Utah County and a customer of Rocky Mountain Power I hope that the proposal to change the Net Energy Metering program from Rocky Mountain Power will be rejected.

This proposal is damaging to the solar industry and discourages homeowners from doing their part by generating green power.

Although existing solar customers will not be targeted this time, I fear that this is a step towards a proposal involving existing solar customers.

Please reject this proposal.

---

**Jonathan Clavijo** <jonclani@gmail.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:03 PM

Hello!

My name is Jonathan Clavijo and I truly believe that the RMP proposal is one of the worst anti solar, anti competition that we've seen in the US. I am pro solar and more than that I'm pro freedom, to choose what source I want to power my home. I don't think that it's fair for RMP to kill an industry and keep their monopoly in this state and this day and age. Utans have responded well to solar and I'm proud of that. I personally don't have solar but I want to have that ability when I'm ready to make the switch. Please don't let them get away with it because that only means more money to this monopoly that's trying to kill the middle class. Competition brings cutting edge technology and this will just kill innovation.

Respectfully,

Jonathan Clavijo

**Melia Astin** <melia.astin@gmail.com>

Tue, Nov 22, 2016 at 4:06 PM

To: PSC@utah.gov, hstephenson@le.utah.gov, jknotwell@le.utah.gov

Letting Rocky Mountain Power monopolize the power options in Utah would be a crime! Not only that, it is punishing people who are trying to find a more affordable way to power their homes so they can be better able to care for their families.

It would destroy businesses and jobs dependent on the solar industry. We have already seen what an initiative like this can do to the industry. This was done in Nevada and solar is dead there. No one can afford it. Plus, Rocky Mountain Power already benefits from the extra power generated by the solar panels on everyone's homes.

Please do not let this happen!

## Rocky Mountain Power changes for December 9th

1 message

---

**Connor Williams** <connor.williams@live.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:08 PM

Hi,

My name is Connor, and I am a solar salesman. I did not believe in solar before this year. My friend recruited me and I did not have a reason to not sell solar, so I learned as much as I can about it. I want to have solar when my wife and I have our own house, but Rocky Mountain Power is making that option disappear for our future. Reasons I want to go solar are:

1. Rocky Mountain Power has no competitors other than solar and just like everything else, the prices of electricity are going to be very expensive and continue to rise in price as the future comes. Solar needs to be in place as a solid option for Utah residential homeowners, or Rocky Mountain Power will continue to be a monopoly which is negative for everyone other than people working for Rocky Mountain Power.
2. Solar is a way to be self-sustainable by owning my own source of power.
3. I am in the mechanical engineering program at BYU and all technological advancements we enjoy today are because of growth in those industries that we've had inventions.

If Rocky Mountain Power makes the changes it desires to on the 9th of December, there will not be an opening for advancements in the technology of solar. Even if we as a society are advancing, Rocky Mountain Power will hold back our society from advancing in the electrical industry like an anchor on a boat, and coal-produced electricity will be the only available option for the common-man. Just like "putting all your eggs in one basket" is a bad idea, only having one basket to choose from--coal-produced electricity--is a bad idea.

Please consider the adverse effects Rocky Mountain Power's decisions will have on our societies future if they are allowed to move forward with their desires.

-Connor Williams

1. Coal-produced power will be the only option for growth.

## Re: Docket 14-035-114 Net Metering Policy - Opposition to Proposed Rate Increase by RMP

1 message

---

**Spencer Foutz** <spencer@elementscapitalgroup.com>  
To: psc@utah.gov

Tue, Nov 22, 2016 at 4:13 PM

To Whom It May Concern:

I have learned that Rocky Mountain Power is attempting to **unreasonably** raise the costs for new rooftop solar customers, which effectively restricts free trade and limits access to clean and efficient energy. Being a finance company affiliated with a bank that provides financial support to many of those participating in or purchasing products from the solar industry, **I strongly oppose** these attempts by Rocky Mountain Power to **penalize** solar customers (and solar businesses) through rate increases.

It is important that there is freedom of choice for consumers to elect their source of power and to be enabled to save money through the use of solar power. Utah has long been regarded as a state encouraging forward thinking businesses and cutting edge technology, and efforts have been made for years by state and local leaders to promote that nationally. Solar power is not a trend, but is the future of energy, and Utah has the opportunity be an example to the rest of the country and become a leader in renewable energy production.

All of us in the community are disappointed that Rocky Mountain Power has chosen to put its bottom line ahead of the clean air, consumer choice, solar jobs, and the health of Utah residents.

**This is my personal disagreement with and complaint regarding Rocky Mountain Power's actions.** I oppose it and hope that this can be stopped to save jobs, the environment, and consumer's choices.

Sincerely,

Spencer Foutz

PublicService Commission <psc@utah.gov>

## Rocky Mountain Power's request to change the net metering program

1 message

---

**Quinton Inglet** <QInglet@nelsonlabs.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:14 PM

Hello,

Please do not approve Rocky Mountain Power's request to change the net metering program. As a resident of Salt Lake City one of my major concerns is the quality of our air. One of the few options we have that can make a real impact to our personal carbon footprint is the combination of solar panels and a plug in electric vehicle. With the uncertainty of state and federal tax credits continuing this change to net metering rules could make it so future solar projects are not financially viable.

Again please do not approve this request Utah needs to look forward to a clean energy future.

Regards,

Quinton Inglet

## oppose Rocky Mountain Power's solar fees

1 message

---

Jean Lown <j.l@aggiemail.usu.edu>

Mon, Nov 21, 2016 at 5:18 PM

To: psc@utah.gov

The fact that Trump the climate change denier was elected president does not change the fact that climate change is a reality that we must face and address with positive policies to reduce our dependence on fossil fuels. The fact that human use of fossil fuels is causing our climate to become more unpredictable and extreme is scientific fact. Therefore we need to reduce our dependence on fossil fuels. Solar power is one way in which Utah, a very sunny state, can contribute to reducing our dependence on fossil fuels. By producing more electricity from solar power and less from coal, we can contribute to a better planet and cleaner air. Utah's population is growing at an alarming rate and all those new houses and people demand more electricity. Climate change is resulting in more drought and less snow pack in Utah; snow melt is needed to produce hydro power. After 34 years in Utah's Cache Valley I've never seen the surrounding mountains free of snow in November as we have this year. Climate change is real and will affect power generation.

In order to meet demand Rocky Mountain Power would have to build more power plants, likely fueled by natural gas since it is cheaper than coal, but building new power plants is extremely expensive! By delaying the need for additional power generation, solar panels reduce RMP's need to invest in new generating plants. I urge the Public Service Commission to deny Rocky Mountain Power's new rate structure that would severely discourage new solar installation and penalize people who have invested in the power of the future.

Sincerely,

Jean Lown

**Marisol Sullivan** <marisolsullivan@gmail.com>

Mon, Nov 21, 2016 at 6:49 PM

To: psc@utah.gov

To Whom This May Concern,

I am writing because I strongly oppose a flat rate surcharge for homes with solar panels! This would kill the solar momentum and reduce the incentive for alternative energy and increase our dependence on dirty coal. Have you noticed our air quality the last couple weeks? I am very disheartened that this proposal is even on the table for discussion. We should be moving *towards* and *supporting renewable energy*, not energy that requires extraction -and is far from renewable or environmentally friendly!

Thank you for your time,

## Proposed Solar Power Rate Schedule

1 message

---

**Craig Hamada** <keggie26@gmail.com>

Mon, Nov 21, 2016 at 7:45 PM

To: psc@utah.gov

I am responding to Rocky Mountain Power's proposal to implement a rate schedule that will increase monthly electric costs for those who have solar panels. Not only will this move penalize a subset of electric customers who are doing the "right thing" for the environment, it will negatively impact the incentive for households to convert to solar power in the future. We are currently having solar panels installed. Like many, much of the incentive for us to install solar panels was to do our part in protecting the environment. Environmental concern plays a large part in the decision making for those considering solar panels. Please do not allow Rocky Mountain Power to penalize customers who have solar panels and to demotivate those who may be future solar power users.

## Letter to the Utah Public Service Commission (PSC)

1 message

Ryan Lee &lt;ryan.lee@blueravensolarcom&gt;

Mon, Nov 21, 2016 at 8:28 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

As CEO of one of the largest solar companies in Utah and the nation (Greentech Media ranks our company #11 out of 3,000+ solar companies nationwide), I urge the PSC to please reject Rocky Mountain Power's recent solar fee proposal for Utah. It is a massive overreach and will effectively kill the growth of the solar industry and threaten local jobs across the state.

RMP priced the proposed charges at almost exactly what it will take to extend the payof f time on a solar system from about 12-15 years to 30 years. This was not by accident. They claim the new fees are for "fair share" rates, but in reality this is RMP's attempt to kill off solar so they don't continue to hemorrhage customers to clean energy. RMP's fee rate increase will effectively destroy solar in this state.

The intention of the fee increase was not to share in the cost of solar, but rather to eliminate competition. Please see this rate change for what it is: an attempt to avoid competition by pricing out all solar from the Utah marketplace and maintaining RMP's monopoly.

Across twelve states, all investor-owned utility proposals to implement demand charges on residential or solar customers have either been rejected by the state's regulatory body or withdrawn entirely. RMP has asked for significantly higher fees than any of these previous proposals.

As an alternative to granting Rocky Mountain Power's anti-competitive wish list we would urge you to consider the same course of action as Minnesota. In that state, they use a "value of solar" approach that allows solar customers to share the cost of their impact on the grid in a fair and equitable manner. See the following document for more details: <https://ilsr.org/wp-content/uploads/2014/04/MN-Value-of-Solar-from-ILSR.pdf>

This is a complex and multi-sided issue and RMP has only presented one side. Please do not rule on this issue until you have explored all sides.

RMP's extreme fee proposal will make it impossible for our company to do business in Utah, which represents a large portion of our nationwide solar portfolio. Over 150 people currently work for Blue Raven Solar in Utah, including 75 high-paying corporate jobs here in our headquarters in American Fork. Our company will for certain see layoffs if the PSC implements the outrageous charges that RMP is requesting.

Our company will not be alone: there are currently thousands of people in Utah who rely on their employment in the solar industry to pay their bills. These jobs will all be seriously threatened if these proposed fees are implemented.

I strongly urge you to consider the consequences for the jobs that will be lost, as happened in Nevada last year when similar anti-competitive changes were implemented. Nevada effectively killed solar overnight and saw an immediate 99% drop in solar projects across their state. As a result, thousands of layoffs occurred in the solar industry in Nevada over the ensuing months.

Equally depressing: when the PSC in Nevada allowed solar to be killed, it effectively stamped out a source of clean energy for the state (and nation). Whether you believe carbon consumption contributes to climate change or not, there is no denying that clean energy generated by the sun has a positive impact on our environment, by reducing the reliance on carbon-based energy sources. Please don't let Utah be next in losing a positive force to reduce pollution to our already dirty air. Utahns are tired of the inversions and want to do anything we can to clean up the air.

Finally, I urge you to look at the study that the Pew Research Center recently did on solar. They found an astounding 89% of Americans strongly favor expanding solar power to help address costs and environmental concerns. I can't think of *anything* else that 89% of Americans agree on. In addition, Pew found that 52% of people in the American West have considered solar panels.

Solar is one of the few bi-partisan issues that almost all Americans (left, right and center) can agree is a good thing. Please do not let RMP stamp out the Utah solar market with these proposed fees.

Let the people and the market decide—not the utility company .

Sincerely,

Ryan Lee

## FW: Docket Number 14-035-1 14

1 message

---

**lpflugh110@gmail.com** <lpflugh110@gmail.com>

Mon, Nov 21, 2016 at 9:04 PM

To: "psc@utah.gov" <psc@utah.gov>

I am writing to speak out against the new rate schedule proposed by Rocky Mountain Power to increase the cost for homes adding solar rooftop panels.

Not only is this a negative for the homeowners who are planning to install solar panels, but it will affect the businesses in Utah that are involved in solar. Solar is better for the environment and everyone knows that the air in much of Utah needs all the help it can get.

Adding solar is a big investment. We had planned on adding solar in the spring because it is the right thing to do. If this rate change goes into affect, we won't be able to afford the project.

The PSC should protect the consumer and oppose RMP's proposal.

Mon, Nov 21, 2016 at 9:25 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Public Service Commission,

I am a new rooftop solar customer. In fact, my installation has not been completed. My primary reason for installing a rooftop solar power generation system is for self-reliance in emergency situations, but I would have been able to choose this option if it were not economically feasible according to the current Rocky Mountain Power rate structure.

When I learned that Rocky Mountain Power has proposed a rate hike ~~OML~~ for rooftop solar customers based on a biased study that considers costs but not benefits, I was appalled. This is not only a large corporation defending its monopoly, but I believe it is actually illegal to single out one class of customers. Is it not?

Since your commission is called Public Service and not RMP service, I earnestly implore you to reject the RMP rate hike proposal and service the public - that is, citizens of Utah like me.

Thank you,

Robert Starling

## Rocky Mountain Power Proposal for Solar Panel Users

1 message

---

**Sarah Merrill** <sarahmonique@gmail.com>

Mon, Nov 21, 2016 at 9:28 PM

To: psc@utah.gov

To Whom it May Concern,

My husband and I are Utah natives. We currently live in California, and are in the process of building our permanent home in Weber Valley. A place where we will raise our family of 5 children. It is essential for us to consider the use of solar panels in our home. We want our children to learn the benefits of alternative energy so that we can save money, show good stewardship of our environment and live a simple life without the push and pull of consumerism.

I'm appalled at the proposal Rocky Mountain Power has made to change rates specific to users of solar power. According to the SLTribune "Gary Hoogeveen, senior vice president of Rocky Mountain Power, said the utility company studied the matter and came to the conclusion that net-metering customers are an entirely different class of customer, whose bills should be calculated accordingly." How is it that someone who doesn't use their preferred method of electric consumption is an entirely different class of customer? Is a homeowner who chooses an alternative, money saving, water saving water system for their home a "different class of customer" to the water utility?

Rocky Mountain Power is a monopoly on Utah power. To demand further increase on solar users who alternative sources—no matter a home owner's reason, is an unfair and illegal practice. RMP needs to modernize and adjust, but not at the hands of punishing a growing sustainable industry in Utah and homeowners who are looking for ways to live on less. If their reasoning is based on decreased profits for themselves, that's an internal problem not be handed on to the customer.

This situation reminds me of the growth of digital cameras. Kodak was on top of the photography world as it led the way with film. But as technology changed and digital cameras became extremely popular, Kodak refused to modernize and accept an alternative to film. 15 years ago I used film all the time. I haven't bought film in the last 12 years. Where is Kodak today? Rocky Mountain Power needs to examine the realities on the table--solar is not going away, but coal is. Rocky Mountain Power is threatened by the future. The Commission should not be, and they should not give in to a company that is.

We urge the Commission to look very carefully at all sides of this predicament, and not solely at the proposal of Rocky Mountain Power. We plan to invest the rest of our lives and our children's lives in Utah. We want the best for our family and those we live near. We want to see competitive growth, increase in industry, ideas that promote our stewardship and investment in Utah's resources and choice to the homeowner. Without it, it will kill our ability to afford solar in our home, and still pay out the roof for power--which is exactly what RMP wants to do--control the power industry. Don't drive solar from Utah!

Sincerely,

Sarah Merrill

Utah land owner, and returning resident.

PublicService Commission &lt;psc@utah.gov&gt;

## Rocky Mountain Power's solar fees - no way .

1 message

Valerie Phillips &lt;val@chewandchat.com&gt;

Mon, Nov 21, 2016 at 9:33 PM

To: psc@utah.gov

The hazy smog we're breathing along the Wasatch Front is an obvious reminder of Utah's unhealthy air. And that's before we even get into the winter temperature inversion.

Clean air is critical for every citizen in this state. So please, let's not undermine the clean energy of rooftop solar in the interest of Rocky Mountain Power which already enjoys a monopoly

Asking RMP to do a study recommending rooftop solar fees is asking the fox to guard the henhouse. Of course they are going to exaggerate their costs for net metering, and disregard their advantages such as being able to take excess power generated from rooftops and sell it to other customers.

Our family installed rooftop solar six years ago. It was a considerable, \$20,000 investment for us, but we are generating much of our own clean power. With the incredible fees that RMP has suggested, no one else will want to install solar panels. Who loses? Everyone who breathes air.

You will also be killing Utah's solar industry, which generates hundreds of jobs across Utah, and contributes millions of dollars in sales tax and employee income taxes.

Last year the Legislature voted in an incredible bill that gave Rocky Mountain Power all kinds of benefits. It's well-known that RMP, under Pacificorp, gives hefty donations to Utah's law makers.

Please, let's make it a more even playing field for clean energy. Utahns and their children deserve that.

Thank-you,

Valerie Phillips

## Please reject RMP fees...

1 message

---

**Jolene Riser** <joleneriser@hotmail.com>

Mon, Nov 21, 2016 at 11:53 PM

To: "psc@utah.gov" <psc@utah.gov>

Dear Public Service Commissioners,

Please reject Rocky Mountain Power's (RMP) request to assess new fees to net metering customers. The argument presented in their request is invalid, and I believe they intend to prevent competition, rather than ensure fairness.

In section B (page 13) of UT 14-035-114 RMP Compliance Filing (11-9-16), RMP asserts the following:

"This solar generation often does not coincide with the Company's peak load, thus only minimally reducing that load. Company witness Mr. Marx testifies that a net metering customer's peak production occurs during the spring months while their peak load, and that of other customers, occurs during the summer months. These factors necessitate increasing the size of the distribution facilities as a result of net metering."

The conclusion drawn in that last statement is false. After admitting that solar generation reduces the load on their grid, RMP cannot then claim this causes them to increase the size of their distribution facilities. Even if the peak generation and peak demand are not perfectly synchronized, a very strong correlation exists between when the sun is shining and when air conditioners are running the summer time. Therefore, RMP experiences an actual reduction in peak demand due to net metering customers.

Additionally, excess power from net metering customers can typically be transported to a nearby customer, unlike power from RMP's power plants that travels hundreds of miles. So rather than building costly grid infrastructure that loses efficiency over long distances, net metering customers can utilize existing infrastructure within their own neighborhood. This extends the life of the system's capacity, resulting in a reduction in the need for additional distribution facilities.

Net metering customers should not be punished for reducing the power load at peak demand. The three-part rate structure RMP proposed is intended to make investing in photovoltaic solar so costly that residents would pay significantly more for solar than to utilize RMP's coal-generated power. Because RMP's corporate hierarchy also includes coal mining and distribution, this request appears to be aimed at protecting the supply chain of their existing monopoly, rather than doing what's right for customers and communities.

Recognizing a long-term need for cleaner, sustainable energy, Federal and State legislators have for several years offered tax incentives to make solar more affordable. RMP's proposed rate structure would effectively funnel all these subsidies (and more) back into their own business, which is heavily dependent on pollutive coal technology.

I understand RMP is a business, and their shareholders expect to profit from their operations, but their request is dangerously anti-competitive, anti-consumer, and further threatens the already poor air quality in Utah. Please reject their request, and protect the rights of Utah residents to invest in sustainable energy.

## 15,638 signers: Save Solar for Utah - Affordable Solar Power in Jeopardy in Utah petition

1 message

---

**Ryan Evans** <petitions@moveon.org>  
To: Public Service Commission <psc@utah.gov>

Tue, Nov 22, 2016 at 12:19 AM

Dear Public Service Commission,

I started a petition to you titled [Save Solar for Utah - Affordable Solar Power in Jeopardy in Utah](#). So far, the petition has 15,638 total signers.

You can post a response for us to pass along to all petition signers by clicking here: [http://petitions.moveon.org/target\\_talkback.html?tt=tt-115677-custom-75514-20261121-Pb73PG](http://petitions.moveon.org/target_talkback.html?tt=tt-115677-custom-75514-20261121-Pb73PG)

The petition states:

"Stop Rocky Mountain Power from Killing Residential Solar in Utah Over the last year, Rocky Mountain Power's sister company killed 99% of residential solar in Nevada. Now, Rocky Mountain Power is trying to do the same thing in Utah, by asking the Utah Public Service Commission to approve one of the most aggressive, anti-consumer, anti-competitive, and anti-solar proposals ever brought forth by a utility in the United States. The Commission is required to study the costs and benefits of residential solar in Utah. Most states have found that residential solar provides a net benefit to everyone, not just solar customers. Rocky Mountain Power ignores the full benefits and demonstrated cost-savings that they and all Utahns receive from residential solar. Utah deserves an open and transparent cost-benefit study. We call on Governor Herbert, the Utah Legislature, the Utah Public Service Commission, the Utah Division of Public Utilities, and the Utah Office of Consumer Services to reject Rocky Mountain Power's proposal. We ask the Commission to conduct a robust and fair cost-benefit study so that Utah homeowners can continue to invest in solar and energy independence."

Tue, Nov 22, 2016 at 1:12 AM

To: psc@utah.gov

To whom it may concern,

I want to voice my opinion as a resident here in Utah. I suffer from seasonal depression and my doctor said a lot of it is caused from this horrible inversion we have here in Salt Lake City. Our air quality is as bad as China and worse than any other state in the country! We need to do everything in our power to get better air quality. Solar is going to help with that! We need every home in Utah to go solar so we can save Utah and protect ourselves and future kids. I would love to be able to breathe clean air and not be so sick and depressed.

Please don't raise the rates for RMP and make it hard and expensive to go solar. That's not good for our economy but most importantly our air!

Please think of yourself when you vote, think of your kids. By raising the rates whose going to benefit? Only Rocky Mountain Power. If you don't raise the rates who is going to benefit? So many more people! All the residents who live in Utah! Our kids, our future leaders. The solar industry, think of how many people they employ. The list goes on!

On the governors website on the home page he states he supports clean energy. Burning fossil fuels is not clean energy.

Thank you for taking your time to read my email.

Sincerely,  
Concerned resident

PublicService Commission &lt;psc@utah.gov&gt;

## Reference Document Number 14-035-1 14 Oppose Rate Hike by Rocky Mountain Power

1 message

---

**Monte Stokes** <monte@centurylink.net>  
To: PSC@utah.gov

Tue, Nov 22, 2016 at 6:59 AM

To whom it may concern,

I am writing to strongly oppose any fee or rate hike Rocky Mountain Power is proposing now or ever for solar panel customers using net metering. We believe RMP should have to purchase excess electricity produced by solar panel customers not increase prices on us. To be penalized by Rocky Mountain Power for doing what is right is wrong. To try and change the rules and impose additional fees and charges on customers who act in good faith for the benefit of all is unfair .

In early Spring of 2015 we began researching benefits of Solar Power being promoted by Weber State University during their community wide effort. As a result we purchased a 16 panel solar array and had it professionally installed by contractors vetted by the University. Our array cost us about \$14,000.00 and the new roof we needed before we could install the panels added \$6,000.00. We mortgaged our home to pay for it all and we pay \$200.00 per month on our loan for our solar system. As of this writing our system has been in operation for 368 days.

Before installing solar our equal pay billing to Rocky Mountain Power was \$143.00 per month. Today it is \$69.00 per month. No one I know produces 100% of their electricity needs via solar panels. In our case it is less than half. We installed it only partly because of economic appeal. We try to be good neighbors and stewards of our planet. We recycle, we buy energy saving equipment, we installed extra insulation and energy conserving windows, we conserve whatever wherever we can. We feel solar panel power as a clean renewable energy source that adds benefits worldwide. Our family like many others in Utah has a history of severe, chronic asthma that worsens when air quality deteriorates in part due to fossil fueled power plants. Having cleaner air helps all of us live healthier, happier, useful lives. Not only is the energy we produce at our house clean and renewable it creates jobs and when our system produces extra electricity Rocky Mountain Power sells it to our

closest neighbors thereby reducing strain on their power plants saving everyone money on energy and health care.

Rocky Mountain Power has implied that solar panel net metering customers are freeloaders who are not paying their fair share. Nothing could be more misleading. We own our home and pay property taxes. Our solar panel system increased the value of our property and also increased our taxes. Part of the property taxes we pay are used to fund electrical utility development, maintenance and never ending - always increasing monthly energy costs. Recently Ogden City installed 8 traffic lights to manage an intersection where 2 stop signs used to manage that intersection. Those electrically powered traffic lights run 7 days per week, 24 hours per day and we as tax payers pay for all of the electricity used to power them. These types of projects are taking place everywhere and all of us help pay one way or another. It is wrong for Rocky Mountain Power to accuse solar panel customers of being freeloaders. We installed solar panels to be part of a better community .

We urge the Public Service Commission to deny this and all future rate increase requests from Rocky Mountain Power that affect solar panel net metering customers. RMP could instead work harder towards cooperating with solar production providers to reduce fossil fuel emissions and lower electricity and medical care costs for everyone whether the power is generated by RMP or by solar panel arrays purchased and maintained by good neighbor consumers like us. Instead of rate hike for solar panel electricity producers, we would insist that the PSC force RMP to purchase all excess electricity produced by their solar panel energy producing consumers and that energy they currently get for free from their solar panel customers should be paid for at market values. Finally , in order to be fair and honest Rocky Mountain Power should decrease rates for their Net Metering customers.

Respectfully submitted by ,

Monte Stokes

## Reject RMP's proposed penalties on rooftop solar

1 message

---

**Bryan Dixon** <bdixon@xmission.com>

Tue, Nov 22, 2016 at 7:29 AM

Reply-To: bdixon@xmission.com

To: psc@utah.gov

More than ever before, it is critical for the public to invest in climate-healthy sources of energy, but Rocky Mountain Power's proposal to levy a surcharge on rooftop solar installations does just the reverse.

Solar is a clean source of energy, unlike most of the power production employed by Rocky Mountain Power that relies on CO<sub>2</sub>-producing coal. CO<sub>2</sub> is by far the most damaging source of greenhouse gas pollutants on the planet. If we are to have a healthy planet, we humans must find ways to reduce our negative impacts.

When, and if, RMP finally includes the cost of its pollution in the calculus of rate equity, it may be reasonable to adjust rates for solar vs. non-solar homes and businesses. Until then, it makes little sense to grant them any adjustments.

Instead, the PSC should demand a full accounting of costs, economic and otherwise, of using fossil fuels to generate electricity. RMP is fully capable of modeling and estimating these costs, but is dragging their feet in doing such analyses because it might disrupt their antiquated business model.

It's time we moved RMP into the 21st century and required them to recognize the public costs of their utility business.

**Moni Schwaerzler** <moni@slarts.org>

Tue, Nov 22, 2016 at 8:16 AM

To: psc@utah.gov

I am writing in strong opposition to this proposal.

We have one small planet to live on and it is incumbent upon us to do what we know how to in order to make this planet habitable for the future of the human species.

We should encourage the use of solar power throughout the State, the Country and the World, not the opposite. I am including a new product developed by Tesla for solar roof tiles... [Tesla Solar Roof Tiles](#) that is the future... not going backwards. Just because it is hard to overcome the inertia and fear that drives so much of decision making on this planet is no excuse to look for short term economic gains at the expense of what is right.

I am also including an article by our own Reed Izatt, to help you make a courageous and correct decision. Incidentally the Salt Lake Arts Academy was given a grant a few years back to install solar panels on our roof by Rocky Mountain Power. We save an average of 40 trees a month. Unfortunately no way to gauge how much energy we save.... the bills do not reflect that detail.

Thank you.

To whom it may concern:

Use of solar panels provides an efficient way to convert energy from the sun into electricity. Solar electricity generation is one of the few low-carbon energy technologies with the potential to grow to large scale. Several benefits are immediately obvious. The sun provides unlimited energy that has been used for millions of years to produce green plants. Sunlight is free. With the advent of modern physics, chemistry, and engineering during the past century, clever individuals have discovered how to convert sunlight into electricity using readily available chemical elements. In the past few years, this discovery has been commercialized and is now the basis for a rapidly growing global enterprise that has the promise over the next few decades of providing electricity to a wide variety of users ranging from homeowners to large businesses at competitive rates. Today, it is estimated by the Solar Energy Industries Association that the U.S. solar industry employs 174,000 Americans and pumps nearly \$18 billion per year into our economy.

Advantages of solar energy for electricity production are many. Solar panels can be used for small installations such as homes or for large buildings. A solar inverter is used to convert direct current output into alternating current for use by the energy off-taker. Most installations are tied to regulated electric utility industries, but it is possible to make the operation independent by using rechargeable batteries. The system is simple with no need for extensive transmission lines from commercial coal, natural gas, or nuclear electric power generating plants to the user. Secondary effects encountered with the use of coal, natural gas, or radionuclides to power these plants, such as environmental pollution and negative human health issues are eliminated. This is a tremendous benefit, especially in developing countries, since waste generated in mining, processing, and using these resources is large and expensive to treat, if treated at all.

Use of green technologies, such as solar panels, is increasing on a global scale. Western Europe, China, and India are prime movers in this effort. The population of India is over one billion. Of these, about 300 million do not have access to electricity. This number is equal to the population of the United States. India has embarked on a program of installing solar panels on rooftops and setting up massive solar parks. This effort is expected to catapult India to the forefront of the global effort to bring electricity to all. An immediate benefit is the decreased need to build electric power generating plants to provide this electricity.

Some experts predict that by 2050 a major fraction of the world's power should come from solar sources. However, getting to this point will require real and dedicated cooperation among stakeholders including users; providers; local, State, and National legislators and policy makers; and utilities. Many important and controversial issues need to be considered and workable solutions found.

The long-term potential of solar power to meet a significant portion of global electricity demand is assured. It is imperative that stakeholders work together to identify and solve problems. Individuals in the U.S. should be leading this field, not putting impediments in its path.

Reed M. Izatt, ph.D.

Rocky Mountain Power targeting solar customers with a fee is absurd. I do not have solar currently but have considered it because of air quality and having a choice. RMP says that solar costs other rate payers to subsidize solar customers, but that's not really true. From my research when a solar home is not using the power, RMP sells the solar power to a non solar customer for full rate during the morning and midday. These homes provide power so the utility doesn't have to send power. That's the real issue. Rocky Mountain Power loses money. By not allowing people to get solar you are enabling a monopoly to continue. Not to mention solar is a growing industry in Utah.

I find it interesting that only a few months ago Dave Eskelson appeared on television proposing cash intensives for those who use to much electricity so RMP wouldn't have to build more capacity! Now that RMP has there own solar farm they want to penalize/control those who have invested in solar by charging us and others more. This is not only hypocritical but is a blat en attempt to control all electricity production! Our system only produces 4 Kw at it peak so we are still dependent on RMP to supply our yearly needs. There argument that solar owners still use RMP's equipment and lines does not hold water. They should pay us to help RMP so they don't need to add more capacity . This appalling, please oppose this action.

I am writing regarding the proposal by Rocky Mountain Power (RMP) to increase rates for new residential solar installations.

I oppose this rate increase. I do not have, nor do I plan to acquire solar power generation. As a customer of RMP, I am happy to subsidize those that choose to install solar.

An increase in my monthly power bill is a small price to pay in exchange for cleaner air where I live and work. I urge you to deny this request from RMP and help to maintain the opportunity to take advantage of the abundant solar energy available in our state.

Sincerely,

Steven Wollschleger

## Please reject Rocky Mountain Power's proposed rate increase for Residential Solar Installations

1 message

**Tyson Hoffman** <tyson.b.hoffman@gmail.com>

Tue, Nov 22, 2016 at 9:28 AM

To: psc@utah.gov

We have an exciting project for our home. We've signed on financing for installing solar power on our home! Through net metering we will be able to use the excess power we make during the summer/day to pay for the power we use during the winter/night. We are going to be able to trade our power bill for 30+ years with the same price loan payment for ~20 years (worse case scenario, we will be able to accelerate this). This also allows us to 'lock in' our payment and isolates us from power inflation, which will likely rise. After that we pay nothing but the fixed \$9 charge. This reduces our dependence on fossil fuels, reduces our power bills, and is a step on the path to energy independence (You know, in case of zombies).

Rocky Mountain Power(RMP) is not a fan of this. Utility companies are monopolies that use a business model that is about profits and growth. Their investors want them to be selling more power, which means that being more efficient, or supporting residential solar is counter to that business model. Last year Nevada's power company, which has the same investor as RMP(Berkshire Hathaway), increased rates specifically targeting home solar power installations, claiming that those homes are getting a 'free ride' by relying on the power grid that they are no longer paying for. It killed the solar industry in Nevada, installations dropped by 99% and thousands of jobs were lost.

RMP is approaching you, the Public Utilities Commission with a similar/worse proposal. They created a study looking only at costs, completely ignoring benefits, such as no long distance power transmission loss, better utilization of existing local infrastructure, reduced pollution in the valleys which already reaches unhealthy levels, and many more found by other utilities, solar power companies, and academics (33 studies here: <http://www.seia.org/policy/distributed-solar/solar-cost-benefit-studies>). My solar panels, already installed panels, and future installations will save RMP money, and benefit society.

Please look for the benefits, already thoroughly researched by other states, which RMP decidedly left out of their study. Approving RMP's proposal will hurt Utah, we have already seen that in Nevada.

As the safeguard of the public, protect our solar industry, help RMP in its mission to supply Utah with affordable power and deny their rate increase. Their proposal benefits only Berkshire Hathaway at the cost of thousands of Utah jobs, Utah's health, and preventing Utah citizens from contributing to a cleaner more sustainable future.

Please reject their proposal.

Thanks,

## RMP Solar Rate Structure Proposal

1 message

---

**David Johnson** <caroldavidjohnson@gmail.com>

Tue, Nov 22, 2016 at 9:28 AM

To: PSC@utah.gov

I oppose the proposal that Rocky Mountain Power is pressuring *my* Public Services Commission to accept. Their non-standard request for only partial rate changes at an accelerated schedule is not only illogical but unwise. They should go through the normal process and not a hurry-up, out of the ordinary session. This method only contributes to poor decisions and, in this case, a very biased response.

The Rocky Mountain Power (RMP) assertion that solar customers are subsidized by regular customers is illogical. The power produced at a solar home is immediately available where it is produced. Almost no infrastructure is needed to sell the home-produced solar energy to the neighbor next door . No long-distance transmission losses, transformer costs, transmitting lines, right-of-way costs, or other capital investments in facilities are needed. In fact, the infrastructure for this local production of power is borne by the home owner . The solar home owners purchase the producing cells, the switching circuitry , and metering equipment. That power produced is directly useable in the area...immediately ... and automatically . Power that the solar home purchases (when not supporting the RMP grid) is assessed infrastructure costs like any other RMP customer . RMP is running what appears to be a very sophisticated ploy to win a drastic accelerated ruling by our Utah Public Services Commission to benefit RMP and deter home solar production.

We in Utah occupy a unique position in this country . We are blessed with abundant solar power producing possibilities. They should not only be utilized by gargantuan power producing companies and conglomerates but also by smaller utilities and even private homes. Please VOTE NO on their cleverly crafted proposal to stifle self-sufficiency of the citizens of Utah, which you hopefully represent.

Thank You,

David Johnson     Nibley, Utah     435 265 6281

## Opposition to Rocky Mountain Power's new rate structure

1 message

Sarah Los &lt;sarahelizabethlos@gmail.com&gt;

Tue, Nov 22, 2016 at 10:20 AM

To: psc@utah.gov

To Whom it may Concern:

Our president-elect and his cabinet members may deny it, but climate change is a reality that we must face and address with positive policies to reduce our dependence on fossil fuels. The fact that human use of fossil fuels is causing our climate to become more unpredictable and extreme is scientific fact. Therefore we need to reduce our dependence on fossil fuels. Solar power is one way in which Utah, a very sunny state, can contribute to reducing dependence on fossil fuels. By producing more electricity from solar power and less from coal, we can contribute a better planet and cleaner air. Utah's population is growing at an alarming rate and all those new houses and people demand more electricity. Climate change is resulting in more drought and less snow pack in Utah; snow melt is needed to produce hydro power. After 34 years in Utah's Cache Valley I've never seen the surrounding mountains free of snow in November as we have this year. Climate change is real and will affect power generation.

Solar power is not only useful for homes - it can be useful as a way to charge electric or electric-hybrid vehicles as well. Especially with the inversions that we in valley-areas experience in the winter, encouraging purchase of electric or electric hybrid cars could alleviate a huge strain on air quality. And if solar power is an affordable option, people could charge their car batteries safely and efficiently while reducing emissions.

In order to meet demand Rocky Mountain Power would have to build more power plants, likely fueled by natural gas since it is cheaper than coal, but building new power plants is extremely expensive! By delaying the need for additional power generation, solar panels reduce RMP's need to invest in new generating plants. Join the Public Service Commission to deny Rocky Mountain Power's new rate structure that would severely discourage new solar installation and penalize people who have invested in the power of the future.

Sincerely

Sarah E. Los

## Utah Solar Proposal

1 message

---

**kincade bauer** <rawkdog@gmail.com>

Tue, Nov 22, 2016 at 11:13 AM

To: psc@utah.gov

To Whom It May Concern:

I'm writing to express my concern about the new proposal from Rocky Mountain Power regarding solar in Utah. This proposal has far reaching effects that I hope are considered.

- First, this proposal would stifle a very important and fast growing industry in Utah. Solar employs many thousands of Utahns in well paying and technical jobs and doing anything to jeopardize these jobs is completely counter-intuitive to Utah's goal of economic growth.
- Secondly, our valley has significant air quality issues throughout the year. With the projected growth of our population over the next 20 years we need to do everything we can to remove point of source emissions from the valley. Solar achieves this.
- Third, creating any barrier that makes it more expensive for the average family to pay for solar on an ongoing basis creates a bias against lower and middle class families. Solar should be available to all, not just those families and individuals with significant means.
- Lastly, this proposal strikes me as an attempt to further discourage those families that want to provide for their own families by farming, solar, and other activities. If an individual or family elects to pay many months or years worth of their salary for solar to generate their own electricity, they should be able to do so without being encumbered by fees and rate increases by Rocky Mountain Power.

I hope you will reject this proposal from Rocky Mountain Power and consider the many customers who are hoping (and who have been saving) to install solar soon.

Kincade M. Bauer

## Rocky Mountain Power Fees

1 message

---

**The Mountain Outpost** <hello@themountainoutpost.com>

Tue, Nov 22, 2016 at 11:22 AM

To: PSC@utah.gov

Dear Public Service Commission,

I am writing to urge you to reject the new fees that Rocky Mountain Power is proposing for net-metering solar customers. Utah is a great location to take advantage of solar energy, and these fees will hurt local families and business by forcing them to pay more for the ability to use the free energy of the sun. These fees would kill any chance of rooftop solar's continued growth in Utah and would put many rooftop solar companies operating in Utah out of business.

Thank you,

Megan Davin

## Providing CHOICE to Utahns

1 message

---

**Leigh Gibson** <theleighgibson@gmail.com>

Tue, Nov 22, 2016 at 11:35 AM

To: psc@utah.gov

Commissioners -

I urge you to please be weary of any rate Rocky Mountain Power rate hikes that could impede the growth of solar energy in Utah.

Impeding growth of solar affects Utah in so many ways.

First - I don't want my husband to lose his job. He's a proud part of the Auric Solar family – a company that now employs more than 200 Utahns. There are hundreds, I bet even thousands, more people just like me who are worried that our jobs or our husband's jobs could go away.

People keep making the argument that solar had training wheels and is doing so well they don't need incentives or shields from rate hikes. If that were true, why do we continue to incentivize businesses like oil and gas, who have been around for years? Government is known for helping industries that help the community. Solar does that. It not only fuels Utah's economy, but is helping clean our air.

Utah will never NOT have an inversion. It's just a fact of life where we live. However we can have an impact on how much dirty air is trapped in the inversion. By moving away from coal power and using the power of the sun, we can reduce those emissions.

I think there is a happy medium here. I don't think Rocky Mountain Power's solution is correct. Let's get all of the players to the table and determine what is fair.

This whole process screams of corruption, as the rate hike was moved forward on election day, when reporters and the public were too busy to take notice. Let's be transparent and do things in the light.

Thank you for your consideration.

Best,  
Leigh Gibson

## RMP Roof Top Solar Proposal

1 message

Becca Bell &lt;rebeccabell\_1992@hotmail.com&gt;

Tue, Nov 22, 2016 at 11:57 AM

To: "pcs@utah.gov" &lt;pcs@utah.gov&gt;

To whom it may concern,

I have been following news reports and updates, regarding the proposal by Rocky Mountain Power to implement increased rates for customers using rooftop solar. As a consumer and tax payer, I ask that the Public Service Commission overturn their proposal.

Rocky Mountain Power claims that homeowners using rooftop solar systems are harming the economy by placing unfair burdens on other non-solar tax payers, and they feel that gives them the right to essentially implement their own solar tax.

My first issue with this is that it is completely anti-competition, and appears to be a direct means to eliminate any/the ONLY competition RMP may have. Rocky Mountain Power has not produced any evidence (from non-biased sources) to support their claims to justify such measures. This makes it appear to me that they are simply trying to kill their competition and leave the rest of us with no other options than to stick with them, regardless of their continuous trends to hike prices up for no reason.

Not only is this measure by RMP anti-competition, it is harmful to Utah's economy. It is a widely known fact that competition in business drives the economy up, while monopolies do the complete opposite. This measure by RMP would allow RMP to corner the energy market, and force hardworking citizens to continue to pay skyrocketing energy bills, with no other viable options. Solar is a booming industry around the country and is currently driving the economy up in Utah. This measure could kill solar in Utah, resulting in the loss of thousands of jobs. This could be detrimental to our economy.

There is currently a global race towards clean energy, as it is a known fact that our dependence on fossil fuels is harmful to our economy and expensive, as resources continue to become depleted. The issue with non-renewable resources is that they do eventually run out. We are currently depending on resources that we know may be gone within the next few generations. Anyone who is not interested in exploring clean/alternative energy methods is falling behind the curve that the rest of the human race is on. Solar energy is a clean, renewable energy source that does not harm the environment, which is a major reason it is so appealing to everyone else across the globe. Supporting a measure that essentially stops progression is not only harmful to our environment, but it makes us, as a state, look ignorant and resistant to progression and change.

As an energy consumer and tax payer I see this measure by Rocky Mountain Power and it makes me sick to my stomach. This measure passing would not make me decide between getting solar or staying non-solar to pay all my money to Rocky Mountain Power; it makes me start considering staying in Utah or paying my taxes to a state that is in support of competition and clean energy

While it makes sense for Rocky Mountain Power to want to kill solar in Utah, it does not make sense for Utah's Public Service Commission to allow it to happen, as it would be a huge public disservice. Please keep competition and clean energy alive in Utah!!!!

Regards,

Rebecca Bell Fernandez

To: psc@utah.gov

Esteemed commissioners:

I am writing to take advantage of the opportunity to have my voice heard on the issue of solar panels and Rocky Mountain Power's desire to impose a monthly fee on their customers who make use of them.

My understanding is that the resulting cost to individual residential customers could be between \$20 and \$50 a month. I want to point out that my family's average monthly electric bill before we got solar panels was \$50 a month. We invested several thousand dollars into the physical infrastructure necessary to generate solar power based on our understanding that we could offset the cost of this investment by receiving credit for the sale of our excess output. I find it extremely unfair that the rules can be changed on us after the fact.

<http://www.cityweekly.net/utah/power-struggle/Content?oid=2927440>

I would also like to point out that, though Severin Borenstein of the Energy Institute at Berkeley's Haas School of Business is on record as supporting utility companies in their assertion that solar customers cost the companies money, the actual costs he cites involve equipment needed to modernize the grid, ie. to make it more robust so that it can better handle the two-way flow of electricity. This upgrade is not something that benefits solar customers alone but is rather a feature which will benefit all of society. So it's not something people who have invested their own money into improving society by lessening their carbon footprint should be on the hook for.

Borenstein fully acknowledges that the power produced by solar customers is superior in that less of it is lost in transmission between the far-away power plants and the consumers who use it.

Please be reasonable by following in the footsteps of at least seven states who have already acknowledged the large-scale benefits of alternative energy to everyone, including power companies.

Thank you,

David Harris

To: PSC@utah.gov

I would like to take a minute to email you about the proposed changes to net metering by Pacific Corp.

Firstly, to state the obvious. Pacific Corp is a vary large, very rich company. The fact that they are trying to show a hard ship is laughable. They are greedy and are used to using money to buy their way through legislation. Even if the solar market does grow exponentially, they will still be operating at a large profit margin.

Secondly, solar is the way of the future. Especially her in the Salt Lake V alley. I live in Kaysville and the pollution during the fall and winter months is outrageous. I also enjoy running and during those times I actually have an app I check to see if the pollution is too bad for me to run outside. W e are welcoming more and more people into our state all of the time (a majority of them will be new Pacific Corp customers) and this problem will only increase without an option to alleviate some of the problem.

Lastly, our solar install company is a family business. It employs both of my parents, my husband and myself, 4 siblings, a brother in law, an uncle, and my son and daughter, along with 13 others. A warding these changes to net metering to Pacific Corp will not only help to make a rich company richer , it will put a lot of people, and most of my family, out of work. Is the state prepared to take on the cost so many people now being unemployed? And for who's benefit?

Thank you for your time and consideration.

This is crazy, please do not let this happen. RMP knows the benefit of Solar as they themselves use solar. Now, they want to kill competition, and remove jobs, and increase rates!!

Who does that sound like?

This threatens the economic and environmental benefits solar brings to Utah!

Please as the PSC, do not let RMP get away with this and protect the consumer!!

We want to put solar on our homes continually until August as you figure this out not end solar in December.

Please help us, many of us just are so confused now do we sign for solar on our roofs or not?

Best Regards,

**Mark Sherwood,**

Subject: Docket #16-035-T14 Public Comment

To: psc@utah.gov

Cc: jessica.c.s.brown@gmail.com

Dear Commissioners -

We are writing to oppose PacificCorp - Rocky Mountain Power's ("RMP") "Advice No 16-13", filed Nov 9, 2016. We are current net metering customers of RMP and would therefore be grandfathered into the current schedule. However whether this grandfathering is permanent is unclear from RMP's filing; similarly, it is not clear whether we would still be grandfathered if we chose to expand our solar array. Therefore, we feel that we may be personally impacted by the proposed changes.

While the time given for public comment is too short for a full review of RMP's filing, we have the following specific objections:

- 1. It is unclear whether the proposed demand charge is based on total demand or net demand.** If based on total demand over a 1 hour window the charge is clearly not just and reasonable - a customer could exactly match generation and demand and still be hit with the demand charge while imposing no costs on the grid. If based on net demand, we would ask that RMP replace "demand" throughout its proposal with "net demand".
- 2. It is unclear why the proposed rate schedule should apply only to net metering customers.** Assuming that we accept RMP's cost allocations, it seems only just and reasonable that the same rate schedule should apply to all residential customers. This is not the case under RMP's proposal. For instance, why should the fixed monthly charge for net metering customers be \$15 while the basic fixed charge for other customers is \$6? It seems unreasonable that a customer who switches to net metering should immediately increase their fixed costs to the system by 150%. Another hypothetical illustrates this problem: imagine a customer signs up for net metering but does not activate their solar array. A truly just and reasonable schedule would have this customer's bill be unchanged given that their demand and generation (zero) would both be unchanged.
- 3. RMP's calculations exclude financial benefits it gains from net metering.** Our current solar array generates more power than we use - we export an average excess of 130kWh per month to RMP. RMP gives us credits for the excess power; however, these credits expire unused and therefore cost RMP nothing. However, RMP is free to sell the excess power we generate. We cannot find where the financial benefit of selling this excess power is

included in RMP's calculations.

4. **The study RMP relies on is flawed.** While we have not had time to completely review the data RMP presents, Figures 2 and 3 in the testimony of Joelle Steward reveal flaws in the study. These figures compare the load profiles of net metering customers with other residential customers. It is clear that this is a comparison of apples and oranges - the average power used by the net metering customers is higher than that used by other customers. We would hypothesize that net metering customers are on average wealthier and have larger homes. RMP uses this flawed comparison to allocate higher costs to the net metering customers, artificially inflating the charges on the proposed schedule. A properly controlled comparison would examine the average change in the load profile of individual net metering customers before and after net metering was activated.
5. **RMP's proposal results in adverse incentives which may undermine its objectives.** Were we subject to the proposed rate schedule, we believe that it would be favorable for us to install battery storage and disconnect from the grid. RMP's costs would be little affected - it would still have to maintain the same distribution system, power plants, etc - but those costs would be spread among one fewer customer. RMP would also lose the financial benefit of the excess energy we send to the grid; this energy would instead be wasted. Should other net metering customers make the same choice (as we would advocate, given the rapidly decreasing cost of storage), RMP's rate base would be hollowed out while its cost structure would be maintained, shifting even more costs than today onto non-solar customers. Other net metering customers who do not generate sufficient power to fully meet their needs may find it advantageous to disconnect from the grid and use their own generator, with negative consequences for energy efficiency and air quality.

A full review of RMP's proposal would presumably reveal additional flaws. As such, it does not make sense to allow RMP's fast-track request to move new solar customers to a rate structure of "whatever is approved in the future". Doing so only creates needless uncertainty, particularly when the accompanying proposal of a new rate structure is fundamentally flawed.

In sum, we humbly request that the Commission deny RMP's request to use a fast-track process and require it to use the normal rate-setting process for its changes. We hope that RMP will return with a true just and reasonable allocation of costs and reassess its investments and business model in light of the rapidly changing marketplace for electrical service.

Sincerely,

Todd A. Sangster

## Rocky Mountain Power and Solar fee requests

1 message

---

**Ted Skeen** <tskeen@gmail.com>

Tue, Nov 22, 2016 at 12:22 PM

To: psc@utah.gov

I would like it write to you to express my opposition to the requested charge on solar users by Rocky Mountain Power . The reasons given by Rocky Mountain Power do not pass the smell test. It is hard to get reliable information as details are limited to news articles or are hidden in obscure websites. In full, they say they subsidize solar users \$400 per year , which seems to be based on the cost of the infrastructure and the idea that solar users are heavy users during peak hours.

It is hard to determine infrastructure costs, but it doesn't sound like it included the benefit of delaying increases to the power system as demand is growing at a slower pace than the market is growing (directly due to solar generation). Any delay has to save the power company significant sums of money.

The heavy user argument doesn't make sense because it does not fairly account for the use. A solar user is no dif ferent than any other customer, they should be charged on the power they actually consume. Not the power they would be assumed to use if they didn't have solar.

Maybe the power company should also increase the rate on minimal users of power, because they also "are subsidized" by the power company because their bill doesn't come close paying for the subsidy .

I strongly urge you to reject the rate change.

Respectfully yours

Theodore Skeen

---

**Brian Milliner** <bmilliner@comcast.net>

Tue, Nov 22, 2016 at 12:24 PM

To: psc@utah.gov

Hello,

My family would like to comment on the proposed changes to increase fees paid by solar users to RMP .

Our system is not turned on yet so we have not had a billing cycle with net metering. Our rates will be grandfathered in but still have issue with the basis of the proposal.

We find RMP's position very puzzling, unproven, and outright punitive and intimidating.

Their entire purpose is to limit the growth of solar usage and recoup what RMP thinks it's losing in revenue.

Here is why their position is verifiably false.

Our latest power bill, without net metering, is \$61, the month before that, \$78. So we are right where they want every solar user to be, without net metering. Due to conservation, not production.

Are we not paying our "fair share" of grid costs because we are smart and frugal with power? How or Why does adding solar panels change that?

RMP used the example that the average solar user has a bill of \$55. We are paying 6 dollars more without net metering. If we weren't being grandfathered in, our new power bill would be \$75 even though we used less or the same amount of power, yet our bill would be more?

Please explain that.

Their model doesn't account for conservation. It doesn't account for the fact that most people getting panels are already conservation minded and aren't carelessly using energy, whether it's from RMP or Panels.

Their example of \$55 a month is meaningless if we don't know what those users were paying before they got net metering.

Chances are this fee increase would eat up what little savings they had.

That is exactly what RMP wants, to offset the savings and make it the same cost, eliminating the monetary motivation to use solar.

All while trying to shift public opinion against solar users. Calling us free loaders.

During the summer days our system will power our HVAC.

This reduces our power bill/use during the time of year/day in which we use the most energy, and when we pay the most.

This is the money RMP is trying to recover under the guise of grid usage fees.

It needs to be considered that we are paying our fair share and our grid usage isn't any different other than we are using it less during summer days.

Why should that cost us more?

The difference isn't solar users getting a free ride. The difference is we aren't paying RMP during summer days to power our HVAC systems, while not using the grid. Before our systems were installed, we did.

Why should we have to pay extra for that?

Secondly, how is there more demand when we have been RMP customers for 11 years and our energy use at night won't be effected by our panels?

We will still be using the same amount of power at night much like we have the past 11 years, why should be put into a different class than our neighbors that don't have panels?

Energy consumption is going to cost all of us long term.

Everyone is going to pay that price, regardless of where they get their energy from. Which is unfair for renewable users.

Solar panels are reducing the environmental cost and that savings needs to be calculated when considering charges for solar users. This needs to be rewarded, not punished.

Thank you for your time and consideration,

Brian, Chasidy, and Desmond

## Regarding Docket 14-035-114 Net metering Policy Proposal

1 message

---

**Mindy Walsh** <mindy.walsh@auricsolar.com>

Tue, Nov 22, 2016 at 12:27 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

To Whom it May Concern-

As you consider Rocky Mountain's net metering proposal over the next week or so, I respectfully ask that you take the time to heavily weigh the potential impact your decision will have in our community. Please use the Nevada case study as an example of the turmoil RMP's proposal can **and will** cause.

I've been involved with this disruption over the past several years...not only through my career in the industry but as a *net metering customer*. I know personally, as a consumer, that I would not have purchased panels for my **own home** under the proposed rate schedule.

As an industry, we have taken great strides in improving our economy through job creation and tax revenue (use tax as an example). We have made notable progress toward improving our environment and air quality through clean energy. We have ultimately provided an opportunity for our consumers to exercise their American rights in our great Capitalist Country to **choose** who they purchase their energy from. The proposed changes will immediately HALT all of that progress!

I know we need to work out a fair agreement with Rocky Mountain Power to make Net Metering beneficial to both sides. At the same time, allowing them to slip changes in under tight deadlines, and without relevant data and facts behind their proposal is not the right way to do it. They need to follow the necessary steps, under full audit, and propose a *reasonable* change, allowing for input from both sides! Please do not allow Rocky Mountain Power use their power as a Monopoly to bully their competition into submission, there is too much at stake!

When I joined the industry in 2013, there were only a handful of employees with our small company, and only a handful of small companies in the state. We have since grown to over 100 solar companies, representing over 3000 employees, and the most important thing to me is **protecting the 204 families that I feel personally responsible for feeding.**

Please feel free to reach out to me personally if there is any more insight you feel I can provide.

Thank you for your consideration.

Sincerely,

Mindy Walsh

## Save Solar in Utah

1 message

---

**Brendin** <brendinallen3@gmail.com>

Tue, Nov 22, 2016 at 12:36 PM

To: PSC@utah.gov

Hello,

My name is Brendin, I am a resident in Utah, and have been for the last several years, I think it is very important that solar is kept in Utah, reasons include saving Utah jobs, solar has created so many jobs in Utah and helped its economy , I fear if this RMP death sentence is passed it would ruin many careers and families lives. Second is solar helps the environment, I want my kids to someday live in a better world than I do, without all this smog and inversion, solar helps the war on that. Third is keeping choice alive in America, in America we have choice to get the things we want, whole point of going solar is to help the environment and save money, I worry if this RMP initiative is passed that people will no longer have the "choice" to go solar because it wouldn't make financial sense.

Thank you,

## Save Our Jobs, Families, Environment and Choice

1 message

---

**Jared Hallows** <jarednhallows@gmail.com>

Tue, Nov 22, 2016 at 12:37 PM

To: PSC@utah.gov

The proposal made by Rocky Mountain Power on November 9, 2016 is clearly an attempt to further control the energy market in Utah. I understand their desire to protect their business and attempts to eliminate competition; however, as a monopoly which is governed by a board responsible to represent the public, I ask you to take the necessary time to study the issue and develop a plan whereby both Rocky Mountain Power and solar can co-exist.

Rocky Mountain Power's proposal would clearly decimate the solar industry in Utah and therefore leave hundreds of people unemployed at our company and thousand unemployed within the solar industry.

By Rocky Mountain Power's own admission the proposal needs to be studied over a period of months; however, their proposal to institute Schedule 135A starting December 10, 2016 will effectively leave thousands of people unemployed because homeowners can't go solar without knowing the outcome of the proposal and decision by the Service Commission.

Please reject Rocky Mountain Power's proposal to institute Schedule 135A beginning on December 10 and then take the time necessary to develop a plan to save jobs, families, the environment and consumer choice in Utah.

Sincerely,

Jared Hallows

PublicService Commission <psc@utah.gov>

## Solar power

1 message

---

**Peter Roland** <peterroland00@gmail.com>

Tue, Nov 22, 2016 at 12:37 PM

To: psc@utah.gov

Please reject the application by Rocky Mountain Power to greatly increase the rates for net metering customers. It will kill solar power in Utah as it has in Nevada and Hawaii. Increased generation of power from solar rooftop installations is in the public interest and benefits all residents of Utah by decreasing CO2 production to mitigate global warming and decreasing air pollution (a serious problem in the SLC area). The interests of a Utility monopoly should not be allowed to supercede the interests of the public.

I neither own nor benefit from any solar rooftop installation but write only to champion what I see as clearly in the interest of all citizens.

**Lisa D** <purpledragen3@gmail.com>

Tue, Nov 22, 2016 at 12:39 PM

To: psc@utah.gov

This is concerning Docket 14-035-114

Dear Commission that is in Service to the Public,

I have two kids. My son has asthma and can't live in Utah with me! He lives in Iowa where he can breathe easily. Last summer while he was spending summer vacation with me, we had to run to the emergency room and get an inhaler because he couldn't breathe. It was so scary for both of us. Please don't tell me that our air quality here in Utah is good.

We need solar to clean this air up! We also need electric cars, but if they aren't powered by solar, it will just keep making the air so dirty.

I don't have solar, I live in a small apartment, but I know that it's important for our future that everyone get a chance to have solar. Not just rich people, or people in other states and countries! What about Utah? "This is the Place"....

Thanks for listening and thinking about the children.

To whom it may concern,

I would like to show my concern for what Rocky Mountain Power (PacifiCorp) is trying to do to the Utah solar market with Docket 14-035-114. If this Docket goes through it would be a travesty for the Utah economy. There would be lost jobs and all that we are trying to do to increase the air quality in our great state would be lost.

We need to shut down this proposal and stop letting big monopolies like Rocky Mountain Power throw their weight around and try and push this Docket through. Please take a serious look at this Docket and think of the long term ramifications that will happen to our state if this new net metering policy goes through.

Thank you,

Trent Anderson

To: "PSC@utah.gov" <PSC@utah.gov>

I want to make sure that Rocky Mountain Power works with the solar industry and the PSC to ensure that they work together to find a solution that works for everyone.

Too much is at stake for us to not take our time exploring options before making decisions that would kill a young industry doing great things.

To: "PSC@utah.gov" <PSC@utah.gov>

To whom it may concern:

I ask that you please turn down Rocky Mountain Power's Net Metering Policy Proposal. I am extremely passionate about climate change and the future of our world. If this policy passes, it will discourage people from switching to solar energy and hurting our progress on climate change tremendously. I really want to create a better future for my children and grandchildren to come.

Also, I just recently got a job in the solar industry after months of working part time, unable to find full time work. Please do not take away the opportunities for jobs that the solar industry is providing.

I trust you will make the right decision for the community and the world we live in.

Thank you for your time.

---

**Heath Hinton** <heath.hinton@auricsolar.com>

Tue, Nov 22, 2016 at 12:41 PM

To: "PSC@utah.gov" <PSC@utah.gov>

As an Auric Solar employee this proposal directly affects what I can do for the company and my future employment in the solar industry. I am the Net Metering specialist for the State of Utah and parts of Idaho. As a recently discharged disabled veteran I have found my family here at Auric. They have provided me the sense of brotherhood and an atmosphere of acceptance.

I firmly believe that my career is in total jeopardy and if this proposal goes through there will be many like me who will not have any semblance of job security. We all know the solar industry is growing and this proposal could cost many startup companies to fizzle out before they have the opportunity to hire locals who are in desperate need of a job.

Thank you for your time and consideration.

**Alisa Oborn** <always\_smile@msn.com>

Tue, Nov 22, 2016 at 12:42 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

To Whom It May Concern,

I am in strong disagreement to the net metering policy proposal for the following reasons:

- Basic rights – this proposal takes away my basic right to choose where my power comes from
- Solar power in general – solar power is an enormous tool for saving the earth and putting restrictions on renewable energy in this way makes solar not affordable, thereby not allowing people to purchase solar
- Solar industry jobs – the solar industry has shown massive growth in the last couple of years and has employed several thousands of people with steady and worthwhile employment.
- Monopoly – this proposal feels much like an attempt to monopolize solar energy and instead of utilizing it as a renewable and environmentally good choice, it is being used as a money maker and the bottom line.

Thank you for your time,

Sincerely,

Alisa Matsumori

**Michael Lee** <michael8lee@icloud.com>

Tue, Nov 22, 2016 at 12:41 PM

To: PSC@utah.gov

To whom it may concern,

Rocky Mountain Power's proposed changes will be detrimental to the greater Salt Lake area. Please, please, PLEASE do not let them pass. As an asthmatic who just bought his first house in the Sugar House neighborhood, I have a lot of trepidation about this winter season and the unavoidable inversion it brings with it. We will not improve our air quality if we let Rocky Mountain Power's self-interest de-incentivize sustainable energy solutions.

This issue cannot be about money. We need to think about the public's health and wellness of our children. There are other ways that RMP can address their concerns about losing customers; attacking the solar industry is NOT the way to do that.

Thank you for your consideration,

Michael Lee  
Utah resident and clean energy advocate

## Rocky Mountain Power

1 message

---

**Andrew Gittins** <andrewlgittins@gmail.com>

Tue, Nov 22, 2016 at 12:43 PM

To: PSC@utah.gov

Dear Public service commission,

I would like to express my opinion on the rate increases that Rocky Mountain Power has proposed for net metering customers. There are many reasons why this is a bad idea.

Clean, sustainable energy is the future. It's a big step in securing our future and making sure we have a place that we can live safely. It has finally reached the point where it financially makes sense for people in Utah to use cleaner energy sources.

Solar has greatly helped the economy here in Utah. It has created numerous jobs and has allowed people to take an active approach to planning their future in their homes. In a time where inflation is outpacing social security and other income raises, solar allows people to know what their energy costs will be for the 10 to 20 years.

Capitalism allows the people to decide what they want. The electrical grid is a public utility . If rocky Mountain gets this rate increase it will stop allowing people to have any other options. It will restrict people to only using their coal plants.

Please save utah solar!!

Andrew Gittins

Dear Public Service Commission,

I am writing you regarding the Docket 14-035-114 Net Metering Policy Proposal. It saddens me that this measure has even continued to this stage as I think it is in direct opposition of the efforts and hard work we in Utah have put forth to secure a safe and clean environment for our families and our future. It is against our basic rights to promote a monopoly and hinder healthy competition and this will ultimately only lead to lost jobs, lost freedom, and lost hope. I urge you to please consider this motion carefully and to think of all of the people who will be negatively affected if this motion is approved.

I sincerely thank you for your time and consideration.

**Jake Anderson** <jake.anderson@auricsolar.com>

Tue, Nov 22, 2016 at 12:44 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

To whom it concerns,

PLEASE ABOLISH THIS PROPOSAL!

There are 3 main points that I would like to share that I feel strongly about in regards to What RMP is trying to push through:

1 – PROTECT RENEW ABLE ENERGY IN UTAH! Coal is dirty and over 70% of Utah is powered on this. Let solar THRIVE and be the example for the rest of the Nation! Utah's inversion is getting worse! We need better power solutions that provide cleaner options!

2 - This will affect my Industry. I work in the Solar industry. Working to help make Utah environment clean! This proposal could jeopardize my ability to provide income for my family of 7! Please consider the JOBS that this proposal will impact.

3 – This takes away our rights to have “choice”. This policy will take away the People’ s ability to have a choice when it comes to solar . We are in a nation that protects these rights. Pushing this policy through is taking away anyone’s ability to transition into Solar in the future.

Please do not let this pass!!

Thank you for your time in reading this,

## Rocky Mountain Solar Rate Increase

1 message

---

**Dusty Sundquist** <dusty.sundquist@gmail.com>

Tue, Nov 22, 2016 at 12:45 PM

To: psc@utah.gov

I am writing you today to express my concern to the rate increase proposed by Rocky Mountain Power on solar customers. Rocky Mountain Power says it supports solar and its environmental benefits as part of its green sky program, but its rate increase will really hurt the solar industry which has been one of the fastest growing industries here in Utah over the past 5 years. The rate increase will make it take three times as long for customers to get their money back from their investment of solar power. Rocky Mountain Power already doesn't pay its customers for any excess power their solar systems produce in Utah. Everyone here in Utah deals with smog every winter, but solar will greatly help reduce this and Rocky Mountain Power is more worried about its bottom line then cleaning up the air as they claim in their green sky program.

Please make the right decision and stop the rate increase.

Thanks,

Dusty Sundquist

## Don't Let RMP Kill Solar

1 message

---

**Nick Cummings** <nick.p.cummings@gmail.com>

Tue, Nov 22, 2016 at 12:46 PM

To: psc@utah.gov

To whom it may concern,

I am a Utah resident and have lived in SLC my entire life. I love it here, but am very concerned with the air quality in the valley. I have two young children now and they both have respiratory issues when the air quality is poor. I wonder If Salt Lake is going to be the place for us long term.

Solar has been on our minds for a long time, but we are not in a position to get solar on our home now. I am worried that if RMP passes the current proposed bill we will never be able to afford it. Solar is something that is common since. It's power from the sun that will be available to us forever It is also much better for our environment then what the coal that RMP burns.

With Utah's strong economy we are going to see much more population growth, and as result, more bad air . Lets make smart decisions to make Utah a great place to live for future generations! Please don't let RMP Kill residential solar in Utah!

Sincerely,

Nick Cummings

Tue, Nov 22, 2016 at 12:46 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

I believe that it is important to not only our jobs but for our community to have Solar energy. Utah is leading in worst air quality in the US and this problem will continue to get worse if Solar is not saved. We owe it to our kids and future generations to come. Solar not only helps the quality of air but it also helps our economy. People all over Utah have jobs in Solar. Some do it for more than just the paycheck. Like myself, some do this to help their community and work in a field that is rewarding and beneficial for our community. I don't think Rocky Mountain Power is need of more money. They make plenty as is. They need to allow us to clean the air and make a real change in our community. I hope there is enough people to really make a difference. I truly believe that people should have the choice to have Solar or not. It's the same as phone companies. If they all can learn to get along, so should we. The people of Rocky Mountain Power live here too and I don't see why they wouldn't want clean air for themselves. Let's really make a difference and get our voices heard in saving Solar

Thank you.

**Mechelle Saunders** <mechelle.saunders@auricsolar.com>

Tue, Nov 22, 2016 at 12:46 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

To Whom it May Concern,

My name is Mechelle Saunders. I am an employee at Auric Solar . A company that has shown me great ways to save our planet and taught me all that I need to know about sharing that knowledge. I am writing to voice my opinion on Rocky Mountain Power's proposal to add charges for those who choose to have solar. It is wrong. We should all have the right to choose where our power comes from. Being someone who cares about our environment and the effect that the electric companies are having on our clean air. We all need to stand together and work together to make this world a better place for our future and our children's future. If Rocky Mountain Power raises the fees for Solar owners it makes it harder for our community to afford solar. This would make their fighting chance to better their situation and environment an expensive fight.

This rate change is not being fair to those who choose solar as their alternative energy source. It's not fair to charge them extra when they are using the power they produce and giving any extra back to the grid. Yes, Rocky Mountain Power will have to accommodate for the amount sent back to the grid, but it isn't significant enough to cause a rate increase.

When we work together we can accomplish a lot more than if we fight against each other. Why not focus on being a company that provides solar and electricity? Why not come together to better our choices instead of fight against and force this charges.

I'm standing up to say that I disagree with RMP' s added charges.

**Jimmy Bosserman** <jimmy.bosserman@auricsolar.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 12:46 PM

To whom it may concern,

I wanted to take a brief moment to email you regarding Docket 14-03544 Metering Policy Proposal. I currently work in the Solar industry and as an American I have chosen this industry to bring Food to the Table of my small family of 4. My daughter loves driving around with me on a Sunday afternoon and she points out all the solar panels that are mounted on the rooftops of Utahns. She points out that we are saving trees and allowing people to breathe with every panel of renewable energy that goes up. This is dignity in this! I do this because I believe in making this world far better for my children than it currently is now. What Rocky Mountain Power is trying to propose is Ludicrous and **UNAMERICAN** because it takes away our right to choose where our energy comes from. If you pass this bill you will be killing the solar industry and taking away thousands of jobs here in Utah. If you pass this bill you will be taking away our chance to choose! If we don't have a choice in the matter that what principles are we really living by as Americans. The right to choose my energy source is as essential as the right to choose my own religion or bear arms!

Solar energy brings only positive results to those of us living in this great state of Utah. It brings jobs and clean energy which is greatly needed within the confines of these mountain ranges that we live in. I am begging you to please do the right thing here and allow choice to prevail. Don't allow Rocky Mountain Power to take that away from me and my family. If you would like to reach out to me, I would love the opportunity to allow my voice to be heard. Thank you so much for your time and consideration in this matter.

Thank you,

Jimmy Bosserman

**Shea Kendall** <hsheakendall@gmail.com>

Tue, Nov 22, 2016 at 12:48 PM

To: PSC@utah.gov

To whom it concerns,

I want to voice my thoughts feeling and disgust in regards to what RMP is proposing in Docket 14-035-114. I can't help but feel bullied and like I'm being taken advantage of as I hear what outrageous steps RMP is trying to take to continue to pollute the air here in Utah, remove the option of choice, and put thousands out of work by trying to snuff out the solar industry here in Utah. Especially where my livelihood and my ability to support my family is in jeopardy . To even consider this would mean the PSC holds the same values as RMP and is contributing to the poor air quality , removing choices in our community and wants to take jobs away from their neighbors. What RMP is trying to do is un-American, un-utahan, and trying to side-step processes that protect their customers.

Please don't allow this to happen. Vote down or at least to rate case this Docket

**chris.t.grainger** <chris.t.grainger@gmail.com>

Tue, Nov 22, 2016 at 12:48 PM

To: psc@utah.gov

We need to put an end to this policy that Rocky Mountain Power is proposing. It will limit the amount of potential that solar offers, not just to improving the Utah air quality, but also to the thousands of jobs it provides. The reason RMP has/ is trying so hard to impede this industry from succeeding is because it offers a threat to their profitability. They are putting the environment and all Utah citizens at risk because they don't want their wallets to get any lighter. Thousands of people are installing solar because of how affordable it has become. Passing this bill would be a major step backwards for us, progressively and environmentally speaking. We need to fight this. We need to show them that we deserve a right to choose how we obtain our power. We need to promote the idea that the only way towards a sustainable future is through the use of renewable energy.

## RMP proposal

1 message

---

**Angie Milner** <angie.milner@gmail.com>

Tue, Nov 22, 2016 at 12:49 PM

To: psc@utah.gov

To Whom It May Concern:

I'm writing to express my concern about the new proposal from Rocky Mountain Power regarding solar in Utah.

One of my biggest concerns is our valley has significant air quality issues, especially in the winter . I have asthma, and anything that can help improve the air quality shouldn't be penalized. Solar can help with point of source emissions, especially as the population grows.

I would like to install solar for my family which is already expensive, and there would be barriers created by this proposal that would make it more expensive and harder for families like mine to install and benefit from solar .

In recent years the solar industry in Utah has grown exponentially , and created many jobs for the state, proposals like this are bound to stop the job growth in this field, which is bad all around.

I urge you to reject this proposal from Rocky Mountain Power and consider the many customers who are hoping to one day install solar for all of its benefits.

Thank you,

Angie Milner

**Jared Sorensen** <jaredjsorensen@gmail.com>

Tue, Nov 22, 2016 at 12:50 PM

To: Psc@utah.gov

To whom it may concern,

Utah deserves the solar option without being penalized to do so. You would wonder why the idea to charge utahns more to go solar is even up vote when the word inversion hangs strangles the very valley we love so much. Solar power is not just about money, it's about futures, mine and my children's, and our entire state.

I work for a solar company. My best friend works for a solar company. In fact I personally know 7 people who work for 6 different solar companies that I knew prior to being employed by one. That's our economy. That's families. Allowing the utility companies to punish Utahns for going solar is a threat to all of those people I know , and their families. That is why I write you, because I want to protect theirs, and mine. Say no, reject, shoot down, laugh it, whatever you need to do but do not say yes to net metering fees. It will destroy solar in utah, and in the process, unravel so many families ability to survive and make ends meet. Please, and mean this, please say no. Thank you for your time.

## Rocky Mountain Power's Proposed Rate Increase

1 message

---

**Justin Osborn** <justinosborn2@gmail.com>

Tue, Nov 22, 2016 at 12:50 PM

To: psc@utah.gov

Hello,

Please do not approve Rocky Mountain Power's proposed rate increase!

First off, my job would be in jeopardy as I work in the solar industry. My company has hired many people in the short time I have been here and continues to hire due to the high demand of solar in Utah. More than a few of those are vets that have found a place to belong. Our jobs would be at risk. Nevada made that mistake. Please don't let Utah follow.

Second, we need to start somewhere when it comes to creating cleaner energy. If the rate increase happens, the cost savings of solar will greatly decrease if not go away completely. Who will buy solar then? The choice will be taken away from many as they will not be able to afford it.

Third, we can make strides forward in air quality through solar. Our air quality in the Salt Lake Valley can be very bad. My nephew Grayson's asthma flares up because of the air quality in the winter. The only relief he finds is when he is able to leave the valley. How many other Graysons are there who suffer because of poor air quality?

Please do not approve the increase.

Thank you for your time and consideration.

I believe that it is important to not only our jobs but for our community to have Solar energy. Utah is leading in worst air quality in the US and this problem will continue to get worse if Solar is not saved. We owe it to our kids and future generations to come. Solar not only helps the quality of air but it also helps our economy. People all over Utah have jobs in Solar. Some do it for more than just the paycheck. Like myself, some do this to help their community and work in a field that is rewarding and beneficial for our community. I don't think Rocky Mountain Power is need of more money. They make plenty as is. They need to allow us to clean the air and make a real change in our community. I hope there is enough people to really make a difference. I truly believe that people should have the choice to have Solar or not. It's the same as phone companies. If they all can learn to get along, so should we. The people of Rocky Mountain Power live here too and I don't see why they wouldn't want clean air for themselves. Let's really make a difference and get our voices heard in saving Solar.

Thank you.

To: PSC@utah.gov

To whom it may concern,

I am reaching out in regards to Rocky Mountain Power's net metering proposal. I am asking that you please shut down this proposal. I firmly believe that citizens should have the choice in where their power comes from. I don't believe that allowing Rocky Mountain Power to monopolize power usage in Utah is ethical. Utah is one of the nations hottest markets for solar right now. I currently do not have solar but I know that in the future I would love to be able to power my house from the sun and while doing so reduce my carbon footprint. I also believe that shutting down this proposal will help save Utah's economy along with all the current jobs and potential future jobs that solar provides. Please consider all the people that would be affected now and in the years to come!

Sincerely,

A concerned citizen

Stephanie Cole

To: "PSC@UTAH.GOV" &lt;PSC@utah.gov&gt;

To whom It may concern,

I have to reach out to your guys regarding RMP's proposal to destroy Solar industry in Utah. Clean energy is always my passion since I am a father of 7 years old boy who was born in Salt lake city . I have seen tons of news and studies talking about how bad the air quality in this area and they have been suggested that everyone should come together to help eliminate air pollution in the valley.

Here is my little story , I have done my Solar training course at Salt Lake Community college three years ago, then I finished all requirements to be able to sit for the certified Professional installation from [www.NABCEP.org](http://www.NABCEP.org). Finally, I have passed the exam and became certified since April, 2015. I have been working in solar industry for almost 3 years; moreover I have 5.4KW solar system installed on house which is located right in city boundary for 1 year and a half. Because I have confidence in what I am doing will gradually help all people who may or may not believe in the positive effect on the air quality. I cannot express enough how much happiness I experience when I think I do a right thing due to not only reduce the carbon foot print but to be able to create cleaner air for my son and other people.

Finally , count on me one tiny voice to stop EMP' s proposal.

Thank you.

## Rocky Mountain Power's Greed must be stopped

1 message

---

**Richard Bishop** <richard.auric@gmail.com>

Tue, Nov 22, 2016 at 12:56 PM

To: PSC@utah.gov

To Whom it may concern:

I am writing to ask all of you fine folks to deny Rocky Mountain Power's current request to adjust the power rates along with the net metering functionality.

Solar as it currently stands with its incentives and rebates is essential for Utah probably more than any other state.

We need better air quality and Solar is definitely a factor in helping with this. Rocky Mountain Power needs some major pushback until they realize that they cannot control electricity and it is only the American way to give us as citizens the options that we deserve. Their proposal will be the death of hundreds if not thousands of good jobs in our state, and is only an indication of their greed and lack of consideration for the environment and our very health.

They must be held accountable for their contributions to our bad air quality, and as such should happily welcome their customer's rooftop solar systems to offset their usage and power bills.

Please do what is right for our state and reject their current proposal. Our air quality, jobs, and overall freedom to choose depends on it.

Thanks,  
Richard Bishop

Tue, Nov 22, 2016 at 12:58 PM

To: PSC@utah.gov

To whom it may concern,

I am writing in regards to the net metering proposal by Rocky Mountain Power. I'm not sure if my voice will even be heard, but I have to reach out and voice my opinion in the hopes that the right thing will be done. I am not a solar customer, however I work closely with solar in Utah, and I do believe firmly that passing this policy is NOT the correct thing to do. I have signed the petition and cannot express how devastating passing this policy would be to our state. Many people are arguing that those who do not have solar or do not plan to use solar are simply not affected by this proposal. But millions of people working in the solar industry, which is one of the fastest growing markets in Utah, would be at risk of unemployment if this were to pass. I am currently the only income in my family, and I know many other people within this state whose families are entirely dependent on the jobs they have to provide as the only income. As it is, many of these people are trying to make it by as they are. Passing this proposal would absolutely destroy the ability for thousands upon thousands of people to feed their children and make sure a roof is over their heads.

To think of how many people would be out of jobs makes me sick to my stomach, but even more so is the fact that passing this takes away a persons ability to choose. The reason I feel safe as an American is because I know I always have the ability to choose if i do or do not want to do something.

**I urge you to understand the devastating affect this would have on our state and our economy. Please, please, PLEASE say no.**

To: PSC@utah.gov

To Whom it May Concern:

The purpose of this email is to voice my concerns over the recent Rocky Mountain Power rate increase proposal. First and foremost I believe Rocky Mountain Power is abusing their power over the community. We don't allow bullying in schools. why should we allow bullying by a monopoly? If these changes take effect we are jumping backwards in our fight for a better, cleaner atmosphere. Utah is a state with some of the poorest air quality and those that have taken steps to decrease the need for coal should not be punished.

I believe Rocky Mountain Power should be stopped. Please do not let us take a step backwards in this fight. It is my wish that my children have a clean and safe state to grow up in. Please let my voice be heard.

Thank you,

Tue, Nov 22, 2016 at 1:00 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

To Whom It May Concern

This should concern everyone that would like a choice and voice on how we as a country and state would like to move forward with our energy needs. I would like to reach out to you today to voice my concern regarding docket 14-035-114 net metering proposal.

I started with Auric Solar in August of this year because one, I was looking for a career that had a long term sustainability, the sun comes out every day and two, I was looking for a stable company, Auric is debt free. I was just laid off in an industry where the the government is hurting, healthcare. Federal and State solar tax incentives as well as a choice when it comes to an individual power needs are driving this industries growth. This proposal would put me and my family out of work! By rejecting this proposal you would not put anyone out of work and we could move forward with the question of where our future energy needs and demands come from.

It has come to my dismay that Rocky Mountain Power is trying to kill the solar industry in Utah. It's hard to contemplate the government trying to help an industry and a monopoly trying to destroy it. Our air quality in Utah is among the worst in the nation. 22 red air quality days is equivalent to smoking a half pack of cigarettes a day. We as an industry can provide an alternative solutions to this growing problem.

We are at a crossroads in this country when it comes to how are we going to sustain our growth while still protecting what little air quality that we have. Solar is a vital and key component to this change. We, Solar are on the right side of this problem.

Sincerely,

Randy Hansen

**Steve Goff** <steve.goff@auricsolar.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 1:00 PM

To Whom It May Concern,

I work in the solar industry and am concerned about the future of solar in Utah. We know the nightmare of what happened in Nevada and know now that there is a better solution. When Nevada made their decision, which they ultimately reversed, we had hundreds of solar energy consultants contacting us to try to come to work here because it killed the solar industry in Nevada. People had to uproot their families and ultimately a lot of jobs left Nevada to move to other states. It was a mass exodus of hundreds of companies and thousands from the workforce.

For too long we have tolerated monopolies in the energy sector making us susceptible to fixed pricing and a lack of fair competition. Due to the restriction of trade it has allowed Rocky Mountain Power and it's parent company PacifiCorp to make outrageous profits that have put a strain on the average home in Utah. This is also a company who has no concern for the environment without being forced.

It's time we enter into a new era in Utah. One that is more environmentally friendly and actually does something about cleaning up our unhealthy air. We should be leaders when it comes to clean air and looking for new solutions. We cannot keep doing things the way that we have or our results will only get worse. There is one solution when it comes to our environment and that is go against shareholders and be better stewards of our land.

Thank you for your time and consideration in this matter

**Kelly Williams** <kelly.williams@auricsolar.com>

Tue, Nov 22, 2016 at 1:00 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

To all involved,

My name is Kelly Williams and I'm writing to you today in regards to Rocky Mountain Powers proposal involving rooftop installed solar systems. The Utah solar industry has single handily improved the quality of life for me and my family more so than anything else. After years of struggling to find a reliable and viable job to provide for myself and my family I was fortunate enough to find a career within the Utah Solar Industry. The positive impact it has made on my life is beyond words. If this proposal passes I feel that not only my job will be at stake but my ability to make a living in the place I've called home my entire life and hold so dear as I will be forced to find work in my field outside of the state of Utah. I know I am not alone in this as thousands of my fellow colleagues are in the same predicament. So I urge you, please help save the jobs of thousands of Utah residents, help promote one of the most stable areas of this great states economy and help save the Utah solar industry. Please reject Rocky Mountain Powers proposal regarding solar power in Utah. As always, your time and consideration are greatly appreciated.

Thanks,

## Docket 14-035-114 Net Metering Policy Proposal

1 message

---

Lo Yangali <loyangali@gmail.com>

Tue, Nov 22, 2016 at 1:01 PM

To: psc@utah.gov

Hi!

I just wanted to share my personal input on the net metering proposal. I often have a hard time breathing with our air quality and the fact that more Utah citizens are becoming greener getting solar and electric cars, it gives me hope that I won't have to leave Utah in order to have good health.

The biggest reason people have invested in solar is because we've made big strides in making it affordable and this proposal is going to greatly discourage people from investing in a product that can help clean up Utah air. Utah has campaigns and programs that encourage people to take action for a better, cleaner, environment. Passing this policy seems counter productive to what Utah is trying to achieve.

Please help achieve a better Utah and turn down this proposal,

Lo Yangali

---

**shazzamm@comcast.net** <shazzamm@comcast.net>

Tue, Nov 22, 2016 at 1:02 PM

To: PSC@utah.gov

To Whom it may concern:

I am writing to voice my thoughts on Rocky Mountain Power's ongoing request to adjust the power rates along with today's functionality in terms of net metering.

We need solar today and net metering with its credits as unused power is fed back into the grid deserves the credits as Rocky Mountain Power then sells this same energy to others. Nothing is free and they certainly cannot think that they should pay little to nothing for the extra energy that customers feed back into the grid when they are pulling back out of the grid at night and also during the winter months of less sunlight. Solar power with its incentives and rebates are definitely essential for Utah probably more than any other state. We need better air quality and Solar is a huge factor in helping with this. We need your help in giving Rocky Mountain Power the major pushback they deserve until they realize that they cannot control electricity and it is only the American way to give us as citizens the options that we deserve. Their proposal will be the death of hundreds if not thousands of good jobs in our state, and what they are asking for is only an indication of their greed and lack of consideration for the environment and our very health.

They must be held accountable for their contributions to our bad air quality, and as such should happily welcome their customer's rooftop solar systems to offset their usage and power bills.

Please do what is right for our state and reject their current proposal. Our air quality, jobs, and overall freedom to choose depends on it.

## RMP Solar rate change request

1 message

---

**John Milano** <JRMilano@comcast.net>

Tue, Nov 22, 2016 at 1:09 PM

To: psc@utah.gov

PSC,

While I may not agree with the idea that a for profit company provides their own numbers to justify the number of \$400.00 per customer to cover an equalized infrastructure maintenance cost I don't have the resources to analyze their numbers but the PSC should certainly verify their numbers. RMP likewise charges a premium if a customer chooses to use Rocky Mountain Power Solar as well as requesting private solar to pay extra to be connected to the grid. Where has been the analysis of customers who don't purchase enough power to cover the raw cost of consumed power as well as the \$400 annually for infrastructure maintenance.

The carbon energy companies have been subsidized consistently thus providing an artificial cost for RMP's Power, the latest being an originally approved 53 million dollar tax supplied fund to enhance their ability to continue to make an ongoing profit and since RMP/Pacific Corp. produces their own coal there appears to be a very large conflict of interest when they provide their own numbers to justify their rate increases and pin it on the 1% or residential solar power.

If the PSC truly believes that they can only look at the increase rate for solar customers to pay RMP's connection costs without factoring in the negative affect it will have on the promotion of alternative energy they are being short sighted. When a solar installation goes in there is a tremendous positive impact on the local economy. The tax credits provided by the Federal Government is money that comes back to Utah to be spent here. Between the fees paid to local governments, wages paid to local installation crews and the supplies purchased locally the economic impact cannot be ignored and the negative impact of this request rate structure will have.

If I can't pencil out a positive payback within 12 years which only happens with Tax incentives I can't justify spending the \$40,000 for solar and will leave that money out of the Utah economic cycle which means everyone loses except RMP, the economy, the environment, Utah employment, future alternative businesses, and the consumer you're supposed to protect.

Please take a close look at the far ranging affects an approval of this rate change will have on Utah. Please deny this Rocky Mountain Power rate change request.

## Utah's Solar Industry costs MUST stay low .

1 message

---

**Kate Auman** <kate.auman@gmail.com>

Tue, Nov 22, 2016 at 1:02 PM

To: PSC@utah.gov

Dear Governor Herbert,

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems.

The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah.

The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost.

Utah prides itself as an economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed.

Beyond that, this is our Earth, God's creation. How would He have it be treated

Your leadership on this issue is critical.

## Net Meter Proposal

1 message

---

**4tag@comcast.net** <4tag@comcast.net>

Tue, Nov 22, 2016 at 1:12 PM

To: PSC@utah.gov

I am writing as a concern individual on your Net meter proposal policy I am totally against this proposal, even though I am not a solar customer the impact that this proposal will have not only on the customers who have solar which I am sure the majority of them are concerned for the environment and air quality and that is the reason for their decision on solar but I also believe in the Right of individuals to have the choice of where their power comes from. I am also concerned that this will impact the thousands of jobs that Utah has in this industry and the people who may be at risk for losing their jobs and what that would do on our economy I am also concerned that if in the future if myself or my children decide to go forward with going solar that it will no longer be a favorable. We as American citizens should have that right to make the choice of how we want to power our homes. There is no reason to punish Utahans who are trying to save money via solar apart from the greed of the Power Company. It angers me that as a Power customer that my rates constantly go up and if there is a better, cleaner and cheaper way to receive power via solar which may be something I may look into in the future.

Please do not allow this proposal to move forward for the sake of present and future customers.

Thank you

Tammy Grainger

## Shut Down Rocky Mountains proposal Docket 14-035-1 14 Net Metering Policy

1 message

---

**Debbie Coffin** <debbiecoffin@gmail.com>

Tue, Nov 22, 2016 at 1:12 PM

To: psc@utah.gov

Public Service Commission,

I urge you to read aloud each letter you have received and ask yourself, What do the people want?

I'm not a solar customer at this time but ever much want to be. What Rocky Mountain Power is not in the interest of the public but for there own controlling ways and for economical growth.

I have personally spoken to RMP employees who have said Solar user have only changed when the peak demands are not how much that is being used. It used to be high demands were during the day now its at night.

It was sneaky and unprofessional for RMP to put this in place on election day so it has not been given the attention need for the vast majority to even know what is going on let alone time to react. Then asking for a decision to be made in 30 days in unacceptable, also this be handled by a rate case so every aspect of what they are saying can be proven or denied.

We need solar in Utah to help our environment, clean our air bring back the climate needed to save our economy. You and I can see and feel the changes that are already happening to our state. It's now hotter and drier then ever before and it's not just Utah its the whole United States.

This will kill jobs, make people unemployed, unemployment rate go up, and our climate won't get better .

It is your job to insure we have a choice where and how we get our power. It is Not the choice of RMP to decide where and how We as the public gets our power. RMP has had the market cornered for years because we as the public didn't have a choice or it wasn't affordable enough. Now we do and we choose to use clean energy, we pay the price to invest in product and services for ourselves to produce clean power at a cost we take on. We help RMP by reducing the the daytime peak power demands, We help the environment by providing clean renewable energy to others without any cost, only because the sun came up we created energy and shared it at no cost to those are us. The sun is free and we should use it, don't let RMP give you false information incorrectly stating twisted fact that only benefit themselves and don't clearly show true and correct information.

Shut Them DOWN, Don't let this pass, this would and will be the biggest mistake you ever make. My kids, your kids, your grand kids, and great grand kids will grow up hearing what happens on this topic, What do you want there thoughts to be?

## Docket 14-035-114 Net Metering Policy Proposal

1 message

---

**Donald K. Dufour** <donniedu4@gmail.com>

Tue, Nov 22, 2016 at 1:14 PM

To: PSC@utah.gov

Good Afternoon,

My name is Donald, and I'm writing you today to express my concerns in regards to Docket 14-035-1 14.

I am a 25 year old college graduate, who moved to Utah for two reasons. I believe in clean, renewable energy and Utah's pro business stance offered a promising start to my career.

Rocky Mountain Powers proposal undermines both of those values. It puts thousands of Utah jobs at risk. In addition, it takes away the option for people to choose where there power comes from, and who supplies it. Taking away our options as a society is not only unethical, but its un-american.

Without getting too political, I am genuinely concerned with the direction this country is heading. I have a 9 month old son, who is the greatest gift I've ever been blessed with. I treat the preservation of this planet, its resources, and the treatment of its people as my own personal responsibility. I owe it to my family, my community, and my country to put fourth my best efforts towards sustainable living.

Please, reject this bill. At the very least, allow for a comprehensive case study to be conducted.

Why?

1. To protect Utah Jobs.
2. To preserve our right to choose.
3. To reduce air pollution, and better our communities here in Utah.

Sincerely,

Donald K. Dufour

## The fight against Rocky Mountain Power's Solar charges

1 message

---

**Mechelle Saunders** <meeshmybelle@gmail.com>

Tue, Nov 22, 2016 at 1:17 PM

To: PSC@utah.gov

To Whom it May Concern,

My name is Mechelle Saunders. I am an employee at Auric Solar. A company that has shown me great ways to save our planet and taught me all that I need to know about sharing that knowledge. I am writing to voice my opinion on Rocky Mountain Power's proposal to add charges for those who choose to have solar. It is wrong. We should all have the right to choose where our power comes from. Being someone who cares about our environment and the effect that the electric companies are having on our clean air. We all need to stand together and work together to make this world a better place for our future and our children's future. If Rocky Mountain Power raises the fees for Solar owners it makes it harder for our community to afford solar. This would make their fighting chance to better their situation and environment an expensive fight.

This rate change is not being fair to those who choose solar as their alternative energy source. It's not fair to charge them extra when they are using the power they produce and giving any extra back to the grid. Yes, Rocky Mountain Power will have to accommodate for the amount sent back to the grid, but it isn't significant enough to cause a rate increase.

When we work together we can accomplish a lot more than if we fight against each other. Why not focus on being a company that provides solar and electricity? Why not come together to better our choices instead of fight against and force this charges.

I'm standing up to say that I disagree with RMP's added charges.

## petition against rocky mountain power

1 message

**Cole, Trevor** <trevor.cole@utah.aaa.com>

Tue, Nov 22, 2016 at 1:17 PM

To: psc@utah.gov

To Whom it may concern,

Rocky mountains attempt to raise premiums on those who have solar power is discrimination. Rocky mountain power is clearly scared about the future and the continued progression in clean energy. This state, country, and world need to take small steps forward in becoming a more green, and cleaner planet. Letting Rocky mountain Power discriminate on solar is a step back, and not a step forward. They have a monopoly on our energy source.

I live in Centerville, Utah and I have no other choice but to use Rocky Mountain for my Energy to my home? If I had a different choice I would go with someone else, but that isn't the case. I have no choice but use them. To me that is a monopoly. They control an entire city (and a lot of other cities) and there is nothing we can do about it.

It's about time Government steps up a delivers on their promises to make this country cleaner and better. Not only would Rocky mountains increased rates effect those buying or who already own it, but it would effect our economy. There are 1000's of people who would be out of a job, just so Rocky Mountain power can protect their bottom line.

Sincerely,

Trevor Cole

## Please Stop RMP's industry crushing proposal

1 message

---

**Megan McPherson** <megan.mcpherson@auricsolar.com>

Tue, Nov 22, 2016 at 1:18 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

Public Service Commission,

I am writing to inform your commission on why you should **NOT PASS** Docket No. 14-035-114. Rocky Mountain Power has proposed a rate change for solar customers that would effectively eliminate the solar industry in the state of Utah. As a resident of this state I have a right to choose clean, renewable power over, dirty fossil fuels. If this rate change were to pass, it would virtually wipe out the solar industry in this state. As a resident I would not be able to contribute to a cleaner healthier Utah by choosing to buy a solar system, and we would lose a promising solution to our air quality problem. Thousands of individuals and families would lose their income basically overnight. All we need to do is look at the outcome of a similar proposal in Nevada. The solar industry was crushed within a couple of months, and even large solar companies pulled out of the state. The solar industry is non-existent in one of the best states for solar power . Do not allow this to happen to our great state of Utah!!!

# DO NOT PASS RMP'S RATE CHANGE PROPOSAL FOR SOLAR!

Sincerely,

Meg Mcpherson

## Save Utah Solar. Save Jobs. Don't allow the RMP monopoly .

1 message

---

**Scott Hendrix** <scott@marketingepic.com>

Tue, Nov 22, 2016 at 1:21 PM

To: psc@utah.gov

To whom it may concern,

I represent one of the many uncounted Utahns that maintains a job, largely because of the solar industry . There are numerous industries that benefit from the substantial growth of the solar industry in Utah that are not always counted as "solar industry" jobs. By allowing Rocky Mountain Power to implement these rate increases there are many more than the nearly 3,000 jobs categorized as "solar industry" jobs that will be at risk.

Additionally, my current situation does not warrant purchasing solar because I am not in a home that is large enough for our growing family. We have receives estimates for solar and it makes complete sense for us once we are in our "forever home." By allowing these net meter rate hikes solar will likely not make sense based on the time it will take to break even.

In short, please save our jobs and help our families with tight budget to be able to have options in the future. Utah was voted the best state for business again this year . I can only imagine how much solar played into that. Please DO NOT ALLOW THIS MONOPOLY on our energy. Please give us the right the choose.

Thanks,  
Scott

**From:** "CenturyLink Customer" <sukha@q.com>**To:** [psc@utah.com](mailto:psc@utah.com)**Sent:** Tuesday, November 22, 2016 1:03:45 PM**Subject:** Pacific Corp request to change rooftop solar rate structure

As a concerned citizen of the State of Utah I wish to state my opposition to a rate increase. I have paid for the generating capacity on my roof and provide that electricity to the company with ~~no~~ ~~for~~ my investment. The company Pacific Corp, charges me a monthly fee to stay attached to the grid. It is not the same as a phone company that paid for infrastructure and then must allow a competing phone company to use those lines, I am not gaining income for my panels and having lived in Utah my whole life actually helped pay for the infrastructure as the Federal Rural Electricity Fund. Please keep my concerns in mind as you decide this issue.

## Please do not discourage solar power investment

1 message

---

**Ed Blake** <ed@habitatsaltlake.com>

Tue, Nov 22, 2016 at 1:25 PM

To: psc@utah.gov

To Whom It May Concern:

I'm writing to express my concern about the new proposal from Rocky Mountain Power regarding solar in Utah. This proposal has far reaching effects that I hope are considered.

First, this proposal would stifle a very important and fast growing industry in Utah. Solar employs many thousands of Utahns in well paying and technical jobs and doing anything to jeopardize these jobs is completely counter-intuitive to Utah's goal of economic growth.

Secondly, our valley has significant air quality issues throughout the year. Data suggests that 41% of our valley pollution originates from our buildings. With the projected growth of our population over the next 20 years we need to do everything we can to remove point of source emissions from the valley. Solar achieves this.

I am the CEO of Habitat for Humanity in this area and we seek to make homes not only affordable, but affordable to own. Third, creating any barrier that makes it more expensive for the average family to pay for solar on an ongoing basis creates a bias against lower and middle class families. Solar should be available to all, not just those families and individuals with significant means.

Lastly, this proposal strikes me as an attempt to further discourage those families that want to provide for their own families by farming, solar, and other activities. If an individual or family elects to pay many months or years worth of their salary for solar to generate their own electricity, they should be able to do so without being encumbered by fees and rate increases by Rocky Mountain Power.

I hope you will reject this proposal from Rocky Mountain Power and consider the many customers who are hoping (*and who have been saving*) to install solar soon.

---

**Nicolus Evans** <nicolusevans@me.com>

Tue, Nov 22, 2016 at 1:31 PM

To: PSC@utah.gov

I am extremely concerned with RMP's bullish proposal. This needs to go to a rate case at the very least. We all know Rocky Mountain power is paying less than they have been in a long time for their power . We need local generation to help stabilize the grid. We do not want to be the laughing stock of the nation and become a mistake like Rocky Mountain's sister company in Arizona and Nevada. Our great state of Utah is better than that. We have a strong economy , why should home owners pay "demand fees" or "time of use" fees? They already have a cool keeper program that helps with peak demand. Solar power in Utah is better than the alternative. Coal power is the dirtiest form of power on the planet. RMP has more coal burning power than any other utility . It's time to make a stand against the monopoly. Please at least take this to a rate case. Let's study the proposal and see what it does to our economy and our great state. We need to look at ways to clean up our air and inversion. We need more facts before we even take a look at change. We know they are trying to push a decision with an abatement date? Why be in a hurry to make a big decision? Use facts, not feelings. Study what it will do our home owners and I feel this can be settled by a compromise.

## RMP solar rate hike request

1 message

---

**Stacy Palen** <spalen@weber.edu>

Tue, Nov 22, 2016 at 1:39 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to oppose the proposed Rocky Mountain Power plan for residential grid-tied solar.

I am a physicist, and it has taken me several hours with the proposal to fully understand how to calculate the rate that I would pay. And then it took several more hours to go through all my old records on my PV system to figure out how much I would be likely to pay each month. Only to find that it would be extremely variable. If, for example, I was charging my electric car, running the clothes dryer and cooking dinner for my family at the same time, this will result in an enormous increase in my end-of-month bill, compared to a month in which I did each of those thing sequentially.

While on the one hand, I understand that Rocky Mountain Power is maintaining the electrical grid, and that is costly for them to do; on the other hand, this rate structure is extremely opaque, and very dif ficult for the consumer to navigate and plan for.

I would be in favor of a simpler, more straightforward plan for solar consumers, preferably one which keeps rooftop solar economically competitive, as the federal and state subsidies sunset.

Thank you for your efforts on behalf of the citizens of Utah.

-Stacy

## Input on RMP Solar Program Changes

1 message

rgood36362@aol.com <rgood36362@aol.com>

Tue, Nov 22, 2016 at 1:39 PM

To: psc@utah.gov

As the owner of a residential solar power system, I looked at the RMP proposal and think that there are some holes in their logic, at least for consumers like me who have enough systems to offset all or nearly all of our power requirements.

1. From what I've read of their proposal, they are not taking into account the extra generating capacity they would have to build nor the amount of electricity they would need to purchase on the market during peak usages. The contradiction is that when there is peak usage, it's usually in the summer which is also when my system is producing much more than what I use, therefore I and other solar customers are helping cut down on the expensive peak power that they have to buy on the open market.
2. They claim that we're not paying our fair share for infrastructure. What is the connection other than paying for power, how are non-solar customers paying or being charged for infrastructure?
3. The way their program works now if I have excess power "in my bank" with them in March, that balance is wiped out and I am not compensated at all for it. So with my system projected to give me 103% of what I'll be giving them "free power." On the other hand, in their proposal, when I need to draw from the grid, they want to charge me one of their highest rates. That hardly seems fair and equitable.

Although I will already be grandfathered into the current plan and therefore have no "skin in the game" I believe this proposal will remove nearly all the incentive for residential solar and allow them a monopoly on solar energy using their solar "farms."

Thank you for your time and consideration.

**RE: Proposed Rocky Mountain Power solar customer penalty**

1 message

---

**Eric Anderson** <eric.anderson@auricsolar.com>

Tue, Nov 22, 2016 at 1:43 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

I'm writing to express my concern about the proposed penalty to be levied against residential solar owners.

From my way of thinking it's very simple: Warren Buffet does not own the Sun, and the State of Utah has no authority to grant it to him.

Excess solar power pushed to the grid by residential solar customers is SOLD by RMP at full retail. They are not suffering. At this point residential solar is barely a blip on their radar screen.

Solar is one of the fastest growing industries in Utah, and is accelerating rapidly. Thousands of jobs are at stake, including mine. I will be watching this very closely, and staying in touch with my elected representatives. I urge you to reject their wrong-headed attempt to manipulate the political system for their own gain, at the expense of the average citizen.

Thank you.

## Opposition to Rocky Mountain Power's Rate Increase

1 message

---

**Glen Jones** <glen@ccbankutah.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 1:55 PM

To Whom It May Concern:

I have learned that Rocky Mountain Power is attempting to unreasonably raise the costs for new rooftop solar customers, which effectively restricts free trade and limits access to clean and efficient energy. Being an employee of a bank that provides financial support to many of those participating in or purchasing products from the solar industry, I strongly oppose these attempts by Rocky Mountain Power to penalize solar customers (and solar businesses) through rate increases. It is important that there is freedom of choice for consumers to elect their source of power and to be enabled to save money through the use of solar power. I am disappointed that Rocky Mountain Power has chosen to put its bottom line ahead of the clean air, consumer choice, solar jobs, and the health of Utah residents.

Please accept this as my personal disagreement with and complaint regarding Rocky Mountain Power's actions. I oppose it and hope that this can be stopped to save jobs, the environment, and consumer's choices.

Kind regards,

Glen R. Jones

**Jason Williams** <jasonwllm63@gmail.com>

Tue, Nov 22, 2016 at 1:57 PM

To: "psc@utah.gov" <psc@utah.gov>

To whom it may be concerned...

Please help by understanding, I feel strongly that we need to be able to make a difference by contributing to the opportunity to have solar power.

The only way to do this effectively is by utilizing a grid system, battery system don't work. They are expensive and wear out.

When you have a monopoly of one power company providing for the grid they propose changes with what is to their benefit. I've actually heard that power production is cheaper now than it used to be, yet the power company rates continue to go up. The rich get richer seems evident in this monopoly. Allow individuals the right for their own power plants. Study the case, don't allow them to push this threw .

Please, please make an educated decision by learning all angles.

Sincerely yours,

Jason Williams

## Save Utah Solar!!

1 message

---

**Justin Garn** <justin.garn@auricsolar.com>

Tue, Nov 22, 2016 at 1:57 PM

To: "PSC@utah.gov" &lt;PSC@utah.gov&gt;

Rocky Mountain Power is doing some pretty underhanded political maneuvering. I understand a company fighting for their own interests, but RMP is fighting AGAINST the interests of Utahns.

Far more Utah jobs are held in the solar industry than in fossil fuel energy right now. Utahns have a right to choose how and where they will purchase or produce power. RMP is defending their virtual monopoly.

Please, do not allow RMP to cripple the countries fastest growing solar energy market! This industry has brought several thousand jobs the state. Utah is pushing the technology to new heights, better than ever before. Please, don't allow Utah to be forced into the back seat of technology.

Very concerned citizen,  
Justin Garn

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

### Public Service Commission Mission Statement

*The primary responsibility of the Commission is to ensure safe, reliable, adequate, and reasonably priced utility service. It conducts hearings and investigations of utility company operations in order to determine just and reasonable rates for service. The Commission strives to protect efficient, reliable, reasonably-priced utility service for customers, and to maintain financially healthy utility companies. These goals are attained through the regulatory decisions the Commission makes and through rules it adopts.*

Dear commissioners,

I'd like to draw attention to the mission of the Public Service Commission. I understand you have a responsibility to ensure reasonably priced utility service. Based on the information provided by Rocky Mountain Power I respect the point of view that distributed rooftop solar may, under current general rate design, be contributing to a shifting of costs. I believe this should be pushed to a general rate case, as the entirety of rate design is an important part of accommodating intelligent integration of rooftop solar. From much of what I have read, distributed generation has benefits to the affordability of power in many markets in America and across the world. As solar technology develops further it will have even more capacity to be an asset to electric infrastructure and rates, not a liability as it is often portrayed.

Ensuring safe utility service is another important aspect of the PSC. In our state, a feature of safety that must be taken into consideration is the air we breath. The Utah market, by purchasing roof top solar, is sending a message that we care about this. We want to implement solutions. I can tell you that is a key reason homeowners are choosing to invest in solar. I know it's only a fraction of our problem but death and disease is concretely avoidable the more we choose energy options that do not contribute to our problem. Please take this into consideration as well as the danger accelerated climate change poses to our state. We need the winter snow pack to support our expanding population. I know its an annoying divisive topic to try and factor in, but I am 28 years old and I want to live in this beautiful state my whole life so please, consider our future. I envision a valley of electric vehicles, public transit, cycle commuters and rooftop solar blanketed across the value. As those solutions become a reality the PSC will be fulfilling its mission for safe utility service in unprecedented ways.

Lastly I'd like to point to your duty to maintain financially healthy utility companies. This kind of action by RMP would be to their own financial detriment. If you have followed the story of NV Energy I can tell you aggressive utility policies against solar adoption are financially dangerous to the utilities themselves.

Thank you for your service.

Good luck ☺

Kyle Oram

Hi PSC folks,

I wanted to write and ask that you carefully think about what is in front of you with the Net-Metering proposal from Rocky Mountain Power! It's true, I work in the industry and love my job but this is bigger than all of us.

We have choices in this country and we should have the choice for how we get our power. Think about the bigger impact on our state ... jobs and environment.

Do the right thing!

Thank you!

Cheers - Julie

## Docket 14-035-114 Net Metering Policy - Opposition to Proposed Rate Increase by RMP

1 message

**Mike Watson** <mike@ccbankutah.com>  
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 22, 2016 at 2:04 PM

To Whom It May Concern:

I have learned that Rocky Mountain Power is attempting to unreasonably raise the costs for new rooftop solar customers, which effectively restricts free trade and limits access to clean and efficient energy. Being the President of a bank that provides financial support to many of those participating in or purchasing products from the solar industry, I strongly oppose these attempts by Rocky Mountain Power to penalize solar customers (and solar businesses) through rate increases. It is important that there is freedom of choice for consumers to elect their source of power and to be enabled to save money through the use of solar power. I am disappointed that Rocky Mountain Power has chosen to put its bottom line ahead of the clean air, consumer choice, solar jobs, and the health of Utah residents.

Please accept this as my personal disagreement with and complaint regarding Rocky Mountain Power's actions. I oppose it and hope that this can be stopped to save jobs, the environment, and consumer's choices.

Thank you,

**Mike Watson | President & CEO**

**Request (Closed):** Subject: rooftop solar rate changes Dear Govern Herbert, I am asking you as my representative to deny RMP's request to change its rate schedule for rooftop solar customers. We must be make strides to improve our air quality in our valley and this proposal by RMP is designed to discourage customers from investing in clean energy. We need to be a national leader in this vital industry and show the nation what a pro-business AND environmentally responsible state looks like. We should be leading the charge to promote clean energy, clean air, and economic growth. I believe that by allowing RMP to charge the people who are trying the hardest to promote clean energy and clean air higher rates is a step in the wrong direction, a step back towards worsening air pollution. And a rooftop solar customer will use less of RMT's fossil fuel generated energy so why should we have to pay more for using less? That is insanity! Please do not protect corporate profits over our air quality!! We all live in this valley and no one wants it to look like Beijing! Thanks you for you time, Nathan Moodie

Thank you.

**Request (Closed):** Subject: Energy there should be no additional fees associated with installing solar panels and connecting to the grid. home owners have every right to try to reduce costs of energy. They will still be paying the power company monthly for what they use. The power company is a monopoly anyway and they want more money. They want to drive solar companies out of business. I am nearing retirement and plan on installing solar panels to help control expenses. Additional fees will not save me any money. This will only increase my dependency on the power company.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky mountain power solar rate hike I would like to suggest that you use any influence you have to not allow Rocky Mountain Power to institute its new solar fee. Yes rooftop solar has costs that are borne by other ratepayers. But the cost of poor air quality associated with coal-fired electricity generation is far higher to everyone else on the Wasatch Front. This without even accounting for risks associated with climate change. Poor air quality can neuter the Wasatch Fronts incredible competitive advantage and rooftop solar is potentially a wonderful way to deal with that. Rocky Mountain Power is allowed to charge this fee then monopoly for electricity is untenable and we should move to scrap it in a way similar to Nevada. I am not a knee-jerk liberal I am a pragmatist and also a proud petroleum engineer. We need clean air. Thank you for your service Governor Herbert and hopefully your attention. Brooks Black

**Office #:**

**Subject:** Public Service Commission

**Request (Closed):** Subject: Oppose Docket Advice No. 16-13 I adamantly oppose PacifiCorp's "Advice No. 16-13", (Nov. 9, 2016), proposing changes to the rate structure for residential solar customers. As a Utah citizen, I strongly urge my Government and Public Service Commission to reject, what appears to be RMP's inappropriately cloaked and rushed request. Further I request the PSC to require RMP to use the normal, and applicable, rate-making process for any proposed changes. Clean, renewable and cost effective energy that is realistically available to every day homeowners is the end goal for government, industry and ultimately society as a whole. What PacifiCorp/RMP is proposing is completely contrary to this movement. RMP's proposal directly and in-proportionately penalizes those citizens willing to invest their hard earned money into solar and a more sustainable energy option. I, personally, have invested over \$8000, out of pocket, to install a net-metering residential solar system capable of supplying enough energy to cover my home needs, including surplus energy which RMP takes at no cost. If these proposed higher fees and rate structure were place at the time I designed and paid for this system, I most certainly would not have made the decision. Both Federal and State agencies see the value in advancing solar initiatives, including residential home use. RMP's proposal will drastically and negatively impact these initiatives. Again, I respectfully request, in the interests of ratepayers and the Utah public, that the Governor urge the PSC to reject PacifiCorp-RMP's current rate change request. I appreciate your consideration of this feedback. Jake Weston Plain City, Utah [jakeweston1@hotmail.com](mailto:jakeweston1@hotmail.com)

**Office #:**

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky Mountain Power Solar Proposal Governor, Please consider the magnitude of the Public Service Commissions decision regarding Rocky Mountain Powers proposal to close the current Schedule 135 service to prospective net metering customers who apply for net metering service after December 9th, 2016. I fear that those making the decision feel this won't have meaningful ramifications to the solar industry but instead feel the decisions made in mid 2017 are those that will decide the fate of solar in Utah. That is not correct. I believe this immediate decision is of greater importance than the ultimate rate changes because at least the rate changes will then be known. RMP is not looking out for the best interest of the consumer with a desire to give them a "heads up" as they claim. They are slyly making the decision of going solar so confusing and so unknown that they will accomplish their goal of stopping solar well before the new rate structure is decided. RMP is doing all in their power to kill the solar industry just as their sister company successfully did in Nevada. Unfortunately for the solar industry, I feel they are playing their cards perfectly. They represent themselves as protecting the masses by significantly over stating their costs and undervaluing the benefits of solar. They have proposed the most ridiculous and aggressive rate structure hoping they will get half of what they are asking for and damming all new solar during the lengthy process of the new rate structure being decided. They are successfully using scare tactics to retain their revenue and monopoly. I agree with Gary W. Hoogeveen with Rocky Mountain Power when he testified to the Public Service Commission that RMP "respects the customers need for reasonable certainty for recovery of their investments." However, RMP's proposal gives customers no certainty regarding their investment. Should the PSC approve RMP's proposal, how can a Utah homeowner that wants to decrease their carbon footprint and take more control of their power complete a reasonable investment proforma? No one, including you, knows what their demand charge would be as our meters currently don't track it and our peak demand is not noted on our bills. I believe RMP is well aware that most customers aren't willing to invest in something where they don't understand the terminology let alone how to calculate the costs. Please do not allow RMP to be successful in their crafty attempt to deceive the public and dramatically slow the fastest growing industry in Utah that also has the most long term benefits. Should the Commission be considering approving RMP's proposal of schedule 135a, I request a public hearing prior to any decision being made. Considering the significant ramifications for thousands of Utah citizens I don't find sending an email as the only available avenue for public comment to be reasonable. Thank you for your time, Kelly Walker

Thank you.

**Request (Closed):** Subject: Docket 14-035-114 Net Metering Policy Proposal Dear Gov. Herbert, Please do not stand by as Rocky Mountain Power moves forward with their proposed rate hikes on solar energy. Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. The solar industry is huge in Utah, and the rates proposed have the potential to kill it. If that happens, thousands of people will be out of work, and Utah's economy will suffer. The solar industry provides Utahns with a source of inexpensive, clean energy, encouraging more responsible use of resources, and helping to improve the air quality. This is especially important as we move into the winter season, when the buildup from cars, homes, and woodburning stoves causes unbearable conditions during inversions. Rocky Mountain's push to increase rates is an effort to monopolize all energy resources including solar is an unfair move that will ultimately punish Utahns. Increasing rates on solar energy will discourage consumers and homeowners from using this clean energy, and instead turn to traditional power sources. The only people who benefit from this are at Rocky Mountain Power - the rest of us are out jobs, money we could be saving, and a responsible power source! Please save solar energy, for the sake of our great

state, our fellow Utahns, and our environment. With concern, Laura M. Coxson

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Save Solar in Utah As a homeowner who installed rooftop solar panels over a year ago I strongly urge you to resist RMP's efforts to add tariffs to customers with rooftop solar panels I personally calculated the payoff of my solar panels so it would coincide with my planed retirement date. These proposed new charges will mean that I will not be able to pay off my panels as expected and will have to continue to work past my current planed retirement goal. RMP argues that they pay rooftop solar panel customers more for power than they would pay for it from their current providers. This is misleading. When we create more power that we are using it is tracked and fed back into the grid at no cost to RMP. Admittedly, we do get a credit equal to the excess amount of power we provide to the grid which is removed from the amount of power we consume and are billed. It is like we are loaning RMP power from our panels during peak periods and then we use later during lower power demand periods. If we create more total power than we use, RMP gets that power from us at no cost. Rooftop solar is a clean way to create power improving our overall air quality. Thank you for your time

Thank you.

**Request (Closed):** Subject: DO NOT TELL ROCKY MTN POWER RAISE COSTS THAT WILL KILL RESIDENTIAL SOLAR IN UTAH Dear Governor, I am a mother of 4 that works for a Solar Co. Please do not let Rocky Mtn Power raise the prices for roof top solar customers! This will eliminate my job! I am the main bread winner for my family and you will literally be putting thousands of solar workers out of a job, Has that even been considered? and for WHAT? So Rocky Mtn Power can have more money, so they can monopolize the energy in Utah and make it so no one has choices? Why the hell is this even under consideration? Is there no middle ground? Punishing customers for helping the environment is disgusting! Last night on the news RMP's spokesperson said that Solar customers either have to decide if they are doing it to help the environment or doing it to save money...why the hell do we have to choose?!!! The tax credit of \$2000 was to reward solar customers was created for a reason. They wanted to reward people for helping the environment but now that RMP is losing money we have to make change and raise prices. Also having solar companies has only helped the economy in Utah. Jobs equal tax payers! I feel sick writing this and begging you for something you already know is morally wrong but that is what this world has come to. Its sickening! Do not let these bastards kill residential Solar in Utah like they already did in Nevada!! Sincerely, Mona Maile

Thank you.

**Request (Closed):** Subject: Rocky Mountain Power Proposal Dear Gov. Herbert, I am writing this brief letter concerning the new rate proposal that Rocky Mountain Power (RMP) has proposed. As you have quickly learned, this new change will Dismantle the solar industry in Utah along with it 1000's of other jobs. After much investigation I found that most of our own legislators don't even know what is on the proposed docket from RMP. This is very concerning to me as to these are the individuals that make our laws in the state of Utah. And that 79 of 104 legislators received some kind of monetary compensation this past year. I feel that I don't need to go into detail of those individuals that are unaware of whats going on and those that are receiving money from RMP, but all I ask is that you Please put politics aside and really look into this matter and what impact it would have on the Utah Economy. Thank you for your help in this matter. Thank you, Johnathon Lopez

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky Mountain Solar Panel Rate Hike. Dear Sirs, I would like to voice my opposition to PacificCorps recent rake hit increase on rooftop solar customers. Please suspend the tariff requested and instead make Rocky Mountain Power, instead go through the normal rate making procedure. Raising the rates on new solar customers as Rocky Mountain wants to do will effectively kill off the rooftop solar market in the state. For further proof of this one only needs to look at recent regulations in Nevada that were devastating to solar companies in the State where within 12 months, rooftop solar applications dropped by 99%. By eliminating the rooftop solar marketplace in the state, this would allow Rocky Mountain Power to take advantage of its monopoly by eliminating consumer choice, energy independence and a consumer's ability to do what they wish on their roof tops. Rocky Mountain Power's study also only takes into account the cost of service for solar customers, rather than conducting a cost/benefit analysis that examines not only the cost, but the benefits provided by solar customers to both the utility and non-solar customers. The proposal by Rocky Mountain Power is the most aggressive, anti-consumer, anti-competitive and anti-solar proposal ever made by a utility in the United States. Itould be bad for business and will kill thousands of solar jobs in Utah. It also unfairly punishes consumers who are trying to save money by using less power The goal of Rocky Mountain Power shouldn't be to kill off a renewable energy platform, and to punish those who are trying to decrease their energy consumption. Instead, they should be looking for ways to assist in these goals. If Rocky Mountain power is worried that the rate of rooftop solar customers is low because too many people cannot afford them, which is what they say is causing the extra cost, the goal is to make Solar easier to be adapted wide scale. If more and more people have solar, than the gap that RMP refers to will be gone. Rocky Mountain also states that customers will still save a fraction of their electrical bill with Solar rooftop panels, but they are not taking into account the initial cost of startup. Decreasing a power bill by 30% does not justify the cost of a Solar system that costs between 15k-20k to setup. As a utility customer in this state who is concerned and the frequently increasing cost of power rates. Something expected to climb by 40% over the next 10 years, I humbly ask for your help in prevent Rocky Mountain Power from killing off the renewable energy solar programs in this state. Rocky Mountain should not be allowed to unfairly punish customers who look to decrease their monthly bills, solely because they choose to get their power from someone other than them. Rocky Mountain Power should not be allowed to become a monopoly. Furthermore, any such decision should be based upon a transparent, robust cost-benefit study. Similar to the one that the Public Service Commission was instructed to perform by the legislature in 2014. Such an anti consumer, anti competition rate hike, such as the one being proposed, just cannot be allowed to happen until after the PSC conducts a robust and independent study that looks at the costs, but also all of the internal and external benefits provided by residential solar. Sincerely, Brandon E. Woolsey West Valley City, UT

**Subject:** Public Service Commission

**Request (Closed):** Subject: RMP Proposal change for net metering. Docket #16-035-T14 Docket #16-035-T14 Public Comment I would like to give you some feedback on the projected Rocky Mountain Power request for a change in their net metering program. There are several key issues that I am vehemently opposed to. 1. They are putting a date of December 9th as the day that the new changes will go into affect when the PSC has determined that this won't be decided until August of next year. The fear factor that this will give to anyone who is considering solar will virtually cause any potential solar customer to wait until next August to see the results before they make a decision. For all practical purposes that will close virtually every solar company in Utah. The date for the effect of whatever the decision is must coincide with the date of the decision by the commission. If the goal for Rocky Mountain Power is to cripple the industry then allowing this date accomplishes that whether the PSC approves this or denies it. 2. I agree that there probably should be a minor change in the current net-metering program but this goes so far beyond what is reasonable that it shouldn't even be allowed to be considered. It should be reconsidered when there is an option such as changing the connection fee from \$6 / month to \$15 or even \$20 per month. 3. The environmental and health affects of going solar would be lost. Thousands of jobs would be lost and many companies will be out of business overnight. Simply by changing the effective date to coincide with the approval or denial of the proposed changes allows the industry to have time to not rush into decisions which could be wrong for all parties. The current structure is equivalent to the electric chair for the entire industry. I hope that is not the goal of public services commission, even if it is the goal of RMP. 4. The current proposal that only grandfathers the current homeowner until they sell the property also seems unreasonable. It would appear to me that once a net meter is installed that that net meter should be grandfathered into the current program for the time that the homeowner owns the home and is on that program or 10 years (as an example) whichever is later. I hope that the commission will take these items into account and remove the December 9th date and move it to coincide with the approval or denial of this proposal. By allowing the December 9th date is equivalent to executing first and then finding out if they are guilty or not guilty after they are dead. At that point it won't matter much what the findings and decisions are. Sincerely, Jeff Tolman

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Rocky Mountain Powers Proposed Rate Change I am writing because I work for a solar company and I feel it my responsibility to express my concern in this matter. Solar is an innovative and clean way to produce power and give back. With the air quality increasingly low it presents an alternative to the smog and betters our economy and environment. The rate change Rocky Mountain power is proposing however creates an obstacle almost

impossible to achieve progress toward a clean air-energy efficient society. If this passes it disables customers from making an informed decision about switching to solar for the next 8 months until the final decision is made. Commission need to be addressed in regards to the issue of rates for solar, but potential customers should know that their rates will stay intact for the foreseeable future and be set at a reasonable rate to allow the the clean energy movement to proceed as advances in development are made. The Public Service Commission should work to protect customers in this aspect as they have in the past.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Solar Power in Utah Governor Herbert, I want to start off by saying that I truly respect you and am very appreciative of your service in making Utah a great state, and the jobs that you have brought to Utah. I have known your family for many years growing up in Orem, doing construction work for your father, Duane, and dating your sister, Linda many years ago. I am generally not one to go out of my way to have my voice or my political views heard until recently. I decided a few years ago to not be silent anymore and let my friends, family, and acquaintances know the way I feel on important matters, to help them vote knowledgably. Rocky Mountain Power (RMP) has made a proposal to the Public Service Commission regarding rates on customers that have a Net metering agreement with Solar Power. Their proposal would kill the consumer solar initiative in Utah and put a lot of people out of jobs. Solar power is one of the fastest going industries in Utah, and it would be bad for Utah, bad for the environment and bad for all of the people with jobs in this industry for RMP proposal to be approved. Please use your influence to make sure that the Solar industry in Utah is given a fair shake and not killed as it has been in Nevada, by RMP's sister company. Thanks for your time and consideration, Chad B Patten

Thank you.

**Request (Closed):** Subject: Docket # 16-035-T14 The War that Rocky Mountain Power has taken to the solar industry is terrible and a sore subject for those who are in business with solar. Rocky Mountain Power should not be able nor allowed to put fees and charges on Solar customers that pay the fair share for their power. America is a place where friendly competition is good for the economy and its people. We the people do not want to have to be over-charged for a necessary resource nor do we want to be stuck with a monopoly company to provide our power. To allow Rocky Mountain Power to stick their hands in and collect what is not rightful theirs is a crock. It would be foolish to allow such a thing. Losing a good resource would be a shame. Sincerely, Dylan Cunningham

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Docket #16-035-T14 I am writing to express my concern with Docket 16-035-T14, and the impact it will have on local businesses and consumers. The Dec 9th proposed rate change will halt solar activity and sales, especially since a decision will not be made until the August timeframe, 136. As of Dec 10th a consumer will now be subject to any as changes described in 135A and will NOT be confident in making a solar investment. RMP's power and position with this docket creates consumer anxiety. For instance, line 225 states that current NEMs will be honored based on homeowner investments. But as of 12/10 that same commitment will not be honored. For the public service, I kindly ask that 135A not move forward and allow consumers to make a sound financial decision. Thanks, Tyler

Thank you.

**Request (Closed):** Subject: Rocky Mountain Power's proposal on Docket #16-035-T14 I have reviewed the Proposal by Rocky Mountain Power and find that it is against the interests of our state and economy. I urge that you use the influence you have to convince the Public Service Commission to deny their proposal. I believe this proposal should be denied because: It is anti-competitive and will destroy residential solar in UT. Leave THOUSANDS of Utah residents unemployed. Since I moved here in 2008 we have struggled with pollution, specifically in our air. Why would we ever want to take away the ability of our residents to use clean solar energy? It is absurd to even consider hindering the growth of solar among our residents. Please vote against and deny RMP proposal.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Please Reject Rocky Mountain Power's proposal against solar. Hi, My name is Connor, and I am a solar salesman. I did not believe in solar before this year. My friend recruited me and I did not have a reason to not sell solar, so I learned as much as I can about it. I want to have solar when my wife and I have our own house, but Rocky Mountain Power is making that option disappear for our future. Reasons I want to go solar are: 1. Rocky Mountain Power has no competitors other than solar and just like everything else, the prices of electricity are going to be very expensive and continue to rise in price as the future comes. Solar needs to be in place as a solid option for Utah residential homeowners, or Rocky Mountain Power will continue to be a monopoly which is negative for everyone other than people working for Rocky Mountain Power. 2. Solar is a way to be self-sustainable by owning my own source of power. 3. I am in the mechanical engineering program at BYU and all technological advancements we enjoy today are because of growth in those industries that we've had inventions. If Rocky Mountain Power makes the changes it desires to on the 9th of December, there will not be an opening for advancements in the technology of solar. Even if we as a society are advancing, Rocky Mountain Power will hold back our society from advancing in the electrical industry like an anchor on a boat, and coal-produced electricity will be the only available option for the common-man. Just like "putting all your eggs in one basket" is a bad idea, only having one basket to choose from—coal-produced electricity—is a bad idea. No one ever got anywhere with only one-option. If coal is the only option for growth in the electrical industry, we will be limited to growth because as you know, coal is not unlimited, and all technological advancements came from an availability to do so. Please consider the adverse effects Rocky Mountain Power's decisions will have on our societies future if they are allowed to move forward with their proposal. -Connor Williams

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Save Solar!! I am one of many who is likely to lose my job if Rocky Mountain Power (RMP) gets its way. Much of our business is done in Utah, and we will suffer as a company tremendously. We are doing our best to look at getting into other markets to bolster our revenues, but this takes time. RMP's proposal gave us no time. These proposed changes by RMP will greatly damage the Utah economy by the hundreds (if not thousands) of solar employees that will now be unemployed. This is too heavy a cost. More time needs to be spent analyzing alternative solutions to RMP's concerns about increased costs associated with their Net Metering of Solar Customers, as well as their decreased revenue to cover their grid maintenance costs. If I weren't so busy trying to get us into other markets right now, I could spend more time analyzing RMP's problems and provide some suggested alternatives. Right now all my energy is spent towards ensuring I still have a job. If I know I have time, I am confident that we can all work together to come up with a mutually beneficial (win-win) solution to the problem RMP is facing.

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: Urge Public Service Commission to Reject RMP Proposal to Change NEM Program To Whom It May Concern: I'm writing in regards to Rocky Mountain Power's deadline of December 9th 2016 for NEM applications to be submitted under the existing plan. These proposed changes and charges to future solar customers have caused uncertainty that's been placed in the public mind. This uncertainty will make it challenging for anyone to go solar after the December 9th without knowing what rate plan they will be on. As a highly involved solar sales representative, I've noticed solar applications drop significantly in Utah, just like they did in Nevada after a similar

deadline was set. For the solar market to continue to exist and to allow people to continue to work in the industry after the December 9th, it's crucial that the Utah Public Service Commission remove the December 9th NEM changes. The public needs to know they are protected under current NEM laws until the time the final decision is made. As I've already previously stated, my company has noticed solar NEM applications decrease as a result of the uncertainty placed in the market by Rocky Mountain Power. We expect that after December 9th NEM applications will come to a stop without knowing what the result of this proposal. The deadline has already caused a decrease in permitting applications to our local offices and solar markets throughout Salt Lake County, Utah County, Ogden, and Southern Utah counties as well. The result has been a loss of revenue to our local cities. We agree that careful deliberation should occur regarding this landmark proposal by Rocky Mountain Power. Homeowners need to know what plan they will be on. Utah's growth to the solar industry has been tremendous. The December 9th decision will stop the progress to make clean energy in Utah possible and negatively affect the local economy. Below, I've listed some very important key points to the impact the NEM decision on December 9th will have on Utah's economy and financial state: As of 2015:

- There were more than 92 solar companies at work throughout the value chain in Utah, employing 2,679 people. This boosts the State's economy and tax revenue.
- In 2015, Utah installed 231 MW of solar electric capacity, ranking it eighth nationally. Installed solar capacity in Utah has grown by 1538% over the last year.
- In 2015, \$389 million was invested on solar installations in Utah. This represents a 1168% increase over the previous year, and is expected to grow again this year. Again this brings tax revenue to the State.
- The 391 MW of solar energy currently installed in Utah ranks the state 14th in the country in installed solar capacity. There is enough solar energy installed in the state to power 67,000 homes. This dramatically eases generation needs of Rocky Mountain Power and eases the burden placed upon the grid, a much needed benefit for our State's fast growing population.
- Over the next five years, Utah is expected to install 2684 MW of solar electric capacity, ranking the state sixth over that time span. This amount is more than 11 times the amount of solar installed over the last five years and will multiply the benefits listed above.

The December 9th deadline will cause such a significant impact upon the Utah job market, state revenues and fair competition, a simple e-mail notification for concerned citizens is not the right format. A public hearing needs to be scheduled prior to December 9, 2016 to provide an open and fair format to comment. A precedent to protect the current NEM laws as deliberation takes place has been set in both Nevada and California when the Investor Owned Utilities also made similar requests to the PUC. Utah must follow this example and continue to allow for people to go to work until the final decision is made. Here's a quote from the State of Nevada's decision to consider its NEM changes: "The Nevada Public Utilities Commission has voted to extended the state's existing solar net metering policy through the end of year, as the commission debates the future of the program." The Utah Public Service Commission needs to follow this example. "We are grateful that the commission's decision will allow Nevadans to return to their jobs today, while the commission determines long-term rules for solar net metering," said Bryan Miller, co-chairman of TASC. I urgently ask you to reconsider the NEM changes and additional charges proposed by Rocky Mountain Power. Do not pass them, especially not without a public forum and an opportunity for Utah's citizens to voice their concerns and opinions about the topic. Thank you for listening to your Utah citizens and respecting their constitutional right to freedom of speech. Josh Boaz Utah Resident, Provo, UT Clean Energy Specialist, Solcius Solar (C) 951.239.7619 (O) 385.225.8205 [www.solcius.com](http://www.solcius.com)

**Subject:** Public Service Commission

**Request (Closed):** Subject: Docket 16-035-T14 Governor Herbert I work for a solar company. I was so excited when I got this job because I realized I could take part in protecting the environment and improving our future. When I see the air quality in the valley, especially in the summer months, I realize, we need to make changes. And, I'm doing my part to help make things better. Rocky Mountain Power's proposed rate change will not allow customers to understand their choice until a decision is reached by the Commission. So, customers will be nervous to go solar after December 9th, until after the final decision is reached. This is a tricky and deceitful, move by Rocky Mountain Power as it removes the ability of any new solar customers to make an informed decision about switching to solar for the next 8 months until the final decision is made. I agree that the Commission needs to address the issue of rates for solar, but, please let potential customers know that their rates will stay intact for the foreseeable future. Planning to make the rates retroactive to December 9th once the final decision is made will significantly affect the solar industry on December 9th. Customers will be frightened by the drastic and obtuse rate changes in the proposal which, in my opinion, will be extremely reduced or done away with sometime next year. Please look into it and make a good decision. Clayton Wilcox

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: RMP utility request Governor Herbert, I urge you not allow the public service commission to allow rocky mountain power to raise their rates. My wife and I would love to put solar up on our house. As it stands, i don't own a home yet. I'm only starting my professional career, and i'm not in a position to buy a house until next year. My wife has asthma and I want to do my part clean up the air we all breathe. The proposed rate changes will make it so that me and my family won't ever be able to afford to go solar. Please don't let allow the requests of large corporations to take away the wonderful opportunity Utah families have to make our air cleaner. Sincerely, Tyler Barton

Thank you.

**Mobile #:**

**Home #:**

**Office #:**

**Subject:** Public Service Commission

**Request (Closed):** Subject: Docket #16-035-T14 Public Comment According to a paper published in a respected scientific paper less than two weeks ago, global temperatures are on track to rise as much as 13 degrees within a lifetime. This is worse than previously thought because it now appears that as climates warm, they become more sensitive to the effects of CO2, creating a feedback loop of sorts that accelerates warming. [www.independent.co.uk/a7407881.html](http://www.independent.co.uk/a7407881.html) A temperature rise of this magnitude would literally be apocalyptic. It would likely decimate humanity and countless other species. Measurable, irreparable damage is already being done to our planet. This is all thanks to our obsession with consumption and short-term monetary gain at the expense of everything else. This obsession is destroying us along with everything worth protecting on this planet, and if short-sighted, self-centered profiteers like Rocky Mountain Power (RMP) get their way, this is exactly what it will do. We therefore have a solemn duty to stop such destructive efforts as RMP's latest proposal, which would wreak havoc on Utah's solar industry and move our state in the wrong direction. We must do everything in our power to promote clean energy even when it requires sacrifice. Without a healthy, habitable planet, nothing else matters. If RMP can innovate and improve itself in a way that promotes clean energy and helps its customers and our planet, it can continue to exist. If it can't, we have no choice but to phase it out of our society and replace it with something that will serve the common good. As a resident of Utah and Planet Earth, I urge you to do whatever is necessary to stop RMP's proposal. There is no cost/benefit analysis to be done here; this is a no-brainer. And it's a historic, high-profile case - legislators, regulatory bodies, utilities, companies, and individuals around the nation will see how you act. Please lead by example and set a good precedent. Please, for all of our sakes, do the right thing! Ryan Bowcutt

Thank you.

## Regarding Proposal by Rocky Mountain Power #16-035-T14

1 message

---

**Greg Lindeman** <gregoryslindeman@gmail.com>

Tue, Nov 22, 2016 at 4:26 PM

To: psc@utah.gov

It was brought to my attention that there is a proposal by Rocky Mountain power that is in the docket for December 9th # 16-035-T14. I have reviewed the proposal by RMP and find that it is against my interests and the interests of our state as a whole. I request that you oppose this proposal, particularly that no changes be made to net metering until you, as the commission, come to the decision on the net metering statute.

Rocky Mountain Power is effectively trying to kill the Residential Solar industry in Utah. There are thousands of Utah residents currently employed by Solar companies. Residential Solar has bolstered our economy and is providing such a great service to the state of Utah. Since I moved to Utah in 2008 we have had an issue with pollution, particularly concerning our air quality. Solar is a great resource to our communities and provides a clean source of power to our homes. Approving the proposal by Rocky Mountain Power would result in taking away the ability of Utahans to contribute to bettering our environment.

Utah has been a great place for anyone looking to start a business. We have a growing economy that is increasing the quality of life for our residents. The growth in our economy is due to the culture of competition in our market. Competition increases efficiency and drives costs down. RMP's proposal will kill residential solar in Utah, and essentially eliminate competition in that area of our market. This is a money grab that will leave thousands of workers unemployed and they don't care.

I implore that you consider my opinion and think about the negative consequences of approving 16-035-T14 on our environment and economy.

I appreciate your time,

Greg Lindeman

## Docket # 16-035-T14

1 message

---

**Rylan Goodwine** <rgoodwine@solcius.com>

Tue, Nov 22, 2016 at 4:26 PM

To: PSC@utah.gov

To whom it may concern,

It has come to my attention that Rocky Mountain Power has proposed to of fset/ combat residential solar here in Utah. From what information I have received, December 9th is a significant date in deciding whether or not to proceed with a solar project. From what I understand, that is the deadline that determines who is affected by the new proposals as set forth by RMP. As an energy consumer, I find that unfair, as well as restricting in my decision making, regarding solar energy.

I feel as if RMP is making an attempt to protect their own interests by "killing of f the competition." By Rocky Mountain power protecting their own interests/revenue, they are taking away my choice to move forward with solar. This makes it so it is a waiting game for me to understand the true impact of how this proposal will af fect me if it is actually carried out. I ask that the current net metering plans be honored.

I think Rocky Mountain power's proposal is self serving, and does nothing to help the public whatsoever. Not only will this negatively affect home owners, but business, and employees across the state.

I firmly believe that this will have a very negative impact of solar activity in Utah, thereby eliminating jobs and eliminating consumer choice. I ask that 16-035-T14 have no further consideration.

PublicService Commission &lt;psc@utah.gov&gt;

**Docket #16-035-T14 Public Comment**

1 message

**Ryan Evans** <revans@utsolar.org>

Tue, Nov 22, 2016 at 4:26 PM

To: psc@utah.gov

Dear Commissioners,

Rocky Mountain Power filed what it calls a transitional tariff putting new solar customers on notice that their rates could be affected by the outcome of the companion compliance filing Rocky Mountain Power submitted with the tariff f. Though the three-part rate the company proposed in the compliance filing would be the worst, most anti-solar rate I'm aware of in the country , the purpose for my letter is to encourage the Commission to suspend the tariff f and not let it take effect December 9th as Rocky Mountain Power has proposed. The uncertainty that tariff f would create would stop any new rooftop solar in Utah and would signal the Commission's intent to impose Rocky Mountain Power's disastrous three-part rate. I encourage the Commission to implement nothing until the Commission makes its final determination about the direction the rooftop solar industry will take in Utah. In addition, I would encourage the Commission to make that determination in the context of a Rocky Mountain Power rate case so that the Commission has all of the information necessary to make the correct decision.

Furthermore, I have attached a petition that has collected more than 16,000 signatures opposing this transitional tariff f. Their names and any comments are contained in the attached document. I hope that you will consider this attachment as public comment.

Thank you for your attention to this matter and helping ensure we have an opportunity to make the case for the benefits of rooftop solar in Utah.

Sincerely,

Ryan Evans

 **Petition Signatures.pdf**  
1666K

Dear Public Service Commission, Utah Office of Consumer Services, Utah Division of Public Utilities, The Utah State House, The Utah State Senate, and Governor Gary R. Herbert,

We are pleased to present you with this petition affirming this statement:

**"Stop Rocky Mountain Power from Killing Residential Solar in Utah  
Over the last year, Rocky Mountain Power's sister company killed 99% of residential solar in Nevada. Now, Rocky Mountain Power is trying to do the same thing in Utah, by asking the Utah Public Service Commission to approve one of the most aggressive, anti-consumer, anti-competitive, and anti-solar proposals ever brought forth by a utility in the United States.**

**The Commission is required to study the costs and benefits of residential solar in Utah. Most states have found that residential solar provides a net benefit to everyone, not just solar customers. Rocky Mountain Power ignores the full benefits and demonstrated cost-savings that they and all Utahns receive from residential solar. Utah deserves an open and transparent cost-benefit study.**

**We call on Governor Herbert, the Utah Legislature, the Utah Public Service Commission, the Utah Division of Public Utilities, and the Utah Office of Consumer Services to reject Rocky Mountain Power's proposal. We ask the Commission to conduct a robust and fair cost-benefit study so that Utah homeowners can continue to invest in solar and energy independence."**

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,  
Ryan Evans

6. I have been a Rocky Mountain Power customer for some years. I recently made the decision to consider going solar. I obviously am excited about improving the air quality in the state, but am excited about the financial investment too. I am fine with paying my share and agree with the \$6 fee currently in place. I also support the commissions desire to fully investigate the cost of solar to the state. I am reading all I can to better understand the effects of solar and am getting bids from a number of solar companies. I don't want to make a quick, rash decision. However, I was disheartened to hear about RMP's proposal for rate changes. After all I've read, I still don't understand what the proposal is. I am very frustrated that they would make the decision retroactive from the time the rate change is solidified back through December 9th. This means, I cannot make a decision until the middle of next year.

As a neighboring state, what Rocky Mountain Power is trying to do is just the utilities company way of fighting for survival. They are simply trying to defend their monopoly of power distribution. Solar and other alternative energy companies create good jobs and benefit all of society by lowering the carbon footprint. Block this move of theirs PSC!

Years ago, Rocky Mountain power asked customers to get on board with cleaning up the air in our state, and reducing fossil fuel emissions by promoting wind power. This program is called “Blue Sky” and continues to promote “renewable energy”. Even though this does not directly reduce costs of Rocky Mountain’s service, it made the appearance that Rocky cared about supporting renewables. With this new round of solar fees and surcharges on the table, it appears that Rocky Mountain does not have this mindset at all. The harsh terms Rocky Mountain seeks to put in place for solar use are such that no one will make the investment in this viable form of residential renewable energy. This de-incentivizes the public from supporting renewable energy, thus keeping us in the grip of polluted air along the Wasatch front and Rocky Mountain’s continued use of coal-fired and gas-burning electricity plants. Rocky Mountain had a 400-page justification for raising and levying surcharges on residential solar use with an unbelievable deadline of just two weeks for public comment – until November 22, 2016! How can anyone have time to wade through this voluminous document, make informed remarks and attend a public hearing, if necessary, to voice concerns? Not to mention it was submitted when the country was distracted with the presidential election with the deadline right on the cusp of the Thanksgiving holiday, when people are readying themselves to host family and friends or traveling out of state. One might conclude that this time period was pre-meditated to provide an optimum environment of eschewing public commentary. I understand there is a “second” deadline in June, however, the push for an imminent minimum rate schedule to be put in place for the citizens of Utah who have yet to purchase residential solar panels, could be foul-play. Ultimately, this move by Rocky Mountain is antithetical in making our government body more accountable to the clean air we, the people, are entitled to along the Wasatch front. The people of Utah want our state to be economically viable in renewables in a world increasingly turning to renewable, alternative energy sources. The people of this state do not support Rocky Mountain burning coal and gas to bring electricity to our homes, while those who are actually generating power and giving it back “free of charge” to the grid are levied surcharges for doing so. The absurdity of this is not lost on the thinking public! Forcing us to stay on the grid actually is a red flag to Rocky Mountain – who needs to change their business model, and plan for a future of more and more residential and commercial solar use. Rocky needs to invest in building large storage stations that can handle the amount of increasing solar energy along the Wasatch front. Sincerely, Deb Badger, Ogden, Utah

Hi, I am a concerned citizen who is worried about Rocky Mountain Power's new proposal for net metering for solar power users. This new plan does not promote investment in clean solar energy in Utah, a state which struggles with clean air as it is. We need to be doing more to help Utahns access clean energy rather than make it more difficult for them. The new fixed fees will hurt those using solar power and scare others away. We must not let Rocky Mountain Power kill the solar market here in Utah, a market that will create new jobs and grow our economy.

When we moved to Utah 5 years ago, a Rocky Mountain Power employee told me point blank on the phone that there was no way they would ever support private solar in homes because they wanted customers to buy their power from them. Yes, she said so in so many words. Now, look. It's happening.

We place a very high value on free market capitalism in Utah. Rocky Mountain Power's efforts to penalize those switching to home solar is a direct attack on the principles of the free market. It is up to our Governor and legislators to assure that RMP fails in their attempt to undermine the free market here in our state.

Nov 22, 2016

---

I have had solar panels for several years now and find the latest request to be without merit. I already subsidize Rocky Mountain Power: They charge me a monthly connect fee AND they buy my excess power at wholesale rates. Charging me more for helping RMP delay building additional generating capacity while I am paying my fair share for using the public utility lines makes no sense at all.

We should be allowed free choice in how we receive our power. Solar is a great benefit for families, who can have lower cost electricity, and thereby have more money, once solar is paid off, to contribute to society. Also, solar is great for the environment, which helps with our growing greenhouse gas problem. Many jobs will also be affected, causing economic strain. Please do not allow Rocky Mountain to stop this forward-moving technology.

Solar is the future. To hinder that is to endanger everyone.

Steven  
Cottonwood Heights, UT 84121  
Nov 22, 2016

---

Please take the time to do a fair assessment of the value of solar in a state like Utah. It's inevitable that much of the states power will come from the sun over time. Blocking it now will just cost jobs and resilience against an unknown future of climate change. Thanks You!

We own a residential and commercial solar company and employ about a hundred dealers who rely completely on solar installation for their livelihood. We have spent years putting this company together and have sustained our livelihood through much hardship and process along with a lot of hard work and commitment. We do not have an alternative means to rely on for additional income. This is it for us. The Utah solar market has been a means for our family to create an income and has blessed us with the ability to provide jobs for dozens of families that need the income. Signing this docket will DESTROY our company and kill any livelihood we can make as well as any that we could offer others. It's devastating to our financial future. PLEASE find an alternative solution to RMP proposal.

I completely support this petition! It is not right to seek to limit people's choices, especially when they are seeking to do good things not only for themselves, but for the environment and by extension others around them. It is not right to seek to create 'red tape' that ends up taking jobs away from good people and squash the 'competition' to keep a hold of a monopoly. Monopolies aren't good, competition is what supports a good, healthy, free market; as well as more pleased consumers.

This is a highly unfair move by Rocky Mountain power. I find it very hypocritical that Rocky Mountain Power is discriminating against Residential Solar Power when they have a billboard off I-15 encouraging solar power through them. Residential Solar power is generating electricity for them, free of charge. Residential Solar is helping Rocky Mountain Power curb the escalating maintenance costs on their power stations and need to build more/expand with the current building boom in Salt Lake and Utah counties.

I am currently the CEO of Evelar Solar, one of the fastest growing companies in Utah. I am absolutely appalled by Rocky Mountains Power's request to add a fee to future solar customers, as their intent is to kill the fastest growing industry in our state. To say they can buy their solar cheaper is ridiculous, as out of all the utility companies in the U.S., Rocky Mountain Power uses more coal than any other utility company and has blatantly opposed solar on rooftops. Every other utility company in the U.S. is encouraging solar with the exception of PacifiCorp, Rocky Mountain Power's parent company. This is a blatant attempt to block competition and severely limit Utah's choice for sustainable, free, and most importantly CLEAN power. We cannot lose one of the most vibrant industries that has created tens of thousands of jobs in Utah. Please join me in opposing this draconian fee request by Rocky Mountain Power and support solar for Utah!

I am writing you to express my reservations regarding Docket #16-035-T14. The public comment period was far too brief and the Public Services Commission should extend the public comment period beyond November 22, 2016. Moreover, Rocky Mountain Power's proposals unfairly single out one group of residential customers with exorbitant, unprecedented, and unjustified fees. This action mimics policies enacted by Rocky Mountain Power's sister company, Nevada Power, which virtually shut down solar power a feasible and affordable choice for many environmentally conscious and responsible residents in the aforementioned area. I believe that you, our commissioners, have not adequately studied the costs and benefits of solar and have a duty to the people of Utah to do so in the sake of sustainability of resources, posterity, and truly and accurately representing the voice of the people.

Please take the appropriate actions to support the residents interested in obtaining or maintaining residential solar as a cost effective renewable energy option. The impact of this drastic and unrealistic timeline of proposed changes will drastically impact a growing industry within Utah. This growing industry benefits the individual community and state by not only providing a cost effective option allowing customers to reallocate their resources within their community the companies involved in the solar selling, installation, and selling/manufacturing each provide jobs which directly impacts our communities and state in a positive manner. Plus many of these companies are involved in many charitable giving campaigns that will then be impacted. Please take action that benefits the residents and local business versus one major company. Thank you.

We have just had solar put in. Why would we get credits from the state to do this then the state turn round and supports the greedy RMP killing off our ability to produce our own power which in turn helps RMP during peek times when they are always claiming we need to save power.

Margaret Corpe  
Layton, UT 84040  
Nov 21, 2016

---

To all concerned: Please vote to keep the air of Utah cleaner. This means, allow the solar industries in Utah to flourish. Do not allow Rocky Mt Power and their parent company, Berkshire Hathaway, from stopping Utah (and other mt west states) from using more solar and other renewable energy sources. We need to move away from fossil fund as development allows. That time is here and now. We need to continue to have more roof top solar panels at an affordable attainable cost. My family and I were able to purchase solar for our home about 2 years ago. It is the right thing to do for the future of Utah's clean air and healthy living. Yes, even with the tax cuts and low monthly fee from Rocky Mt it was a sacrifice, but one well worth it. I know more and more citizens of Utah are willing to make this sacrifice but it has to be attainable. Many of our larger businesses, such as Walmart and eBay would like to go solar, but Rocky Mountain needs to play fairly to allow this to happens. Whatever your place of power may be, please help to make this happen. A citizen and lover of Utah, Peggy Porter Riedesel

Fossil fuels are not our future and renewables like solar should be invested in, not demonized. The fact that a petition is necessary is an embarrassment. Capitalism is about competition, evolution, and a consumers choice. This country is for the people, not utility conglomerates filling thing wallets.

Chris jenney  
Salt lake city, UT 84109  
Nov 21, 2016

---

RMP has taken a great position supporting large scale solar but is making a poor choice in discouraging net-metered distributed scale solar. I encourage RMP to re-examine its decisions and encourage the PSC to develop a structure through which utilities like RMP will still make a profit when more and more of their customers choose to generate their own electricity.

While I am not a current solar user, I go to great lengths to conserve power and be energy efficient. I am concerned that this proposed change will shift more burden onto me - the energy conscious user - rather than on those who use more than the typical share of energy. Those who use the most energy should pay, those who use less or generate surplus via solar should be rewarded. We can have a system that encourages excess and waste (I have the same complaint for many water fee structures).

we need more options for energy not less. I also think that Rocky Mountain Power failed to take into account the full benefits of solar energy on the State of Utah as a whole. Increased jobs, more commerce, higher paid wages for Utah families. Since Nevada enacted a similar measure, the amount of Solar Permit applications throughout the state was reduced by 99%! No Thank You.

I am fortunate to already be a solar consumer. From what I have read and studied about Rocky Mountain Powers proposal to increase cost for new solar consumers would be detrimental for Utah in so many ways: economically, environmentally are the first two ways that come to mind. For the good of Utah I petition that RMCs proposal be outright rejected. Thanks.

There is a deep concern among the residents of this state over the net meter rate schedule proposed by Rocky Mountain Power. This action on their part is creating real issues going forward investing in a grid that works under the distributed model of renewable energy. We all need to plan for the future and that includes Rocky Mountain Power Citizens of this state investing in rooftop solar are allies in this cause, and as residential storage technology improves, will help Rocky Mountain Power create a robust and sustainable power grid. The plan as it is envisioned will absolutely cripple the roof top solar industry in Utah. The pricing structure ensures that solar installations would rarely recoup the large initial investment. Further, the peak power demand charge, modeled after commercial solar installations, penalizes residential grid-tied customers. The Rocky Mountain proposal would also penalize owners of both solar panels and electric cars, discouraging such an investment just when it is crucial that we get tailpipes out of the valley to improve air quality. This has been told to the citizens of the Wasatch front that we need to car-pool or not drive on many poor air quality days. What is the incentivizing for electric cars to curb the pollution we and our children breathe every day? There are quite a few other fee models that could be proposed that don't use commercial solar as a model. It is understood that solar users benefit from the current net meter fee structure, but everyone else benefits from more renewables on the grid, meaning better air quality for everyone. The last thing we should do is discourage people from investing their individual monies in roof top solar. I do not support this plan. There needs to be more time to look at alternatives and keep our economy strong by supporting the free market system, capitalism and clean air in Utah. Please, at the least extend the public comment period so that all stakeholders can adequately review your proposal, and respond with an informed answer.

If the power company is worried about the bottom line, suggest that they tack on a line service fee to all consumers that use their lines, solar users included. This Measure doesn't cut into their profit, and still incentivizes going solar. Essentially, increase rates for everyone not going solar.

Hey Rocky Mountain Power- I am signing this to show my support for alternative energy solutions. As I am sure you are aware - the Salt Lake valley has some of the worst air quality in the nation, especially in the winter months. Reducing the coal /gas being burned and shifting the burden to solar will certainly help with this. Furthermore - I continually hear that solar only "benefits" those who can afford it. This is hilarious - considering the cost to have rooftop solar installed. (I bought my system - not on a lease). Look - I understand the power companies need to make money and maintain the grid, and I support this. However - please do NOT do this at the cost of damaging the environment and health of people living in Utah. Rocky Mountain power should be doing everything it can to make solar more affordable and accessible to EVERYONE!  
Thanks, Cory

Solar energy is creating hundreds and hundred of good paying jobs in Utah and helping to clean our air and make us self reliant energy wise. We need more of this and not less. Hence, the Commission should conduct a robust and fair cost-benefit study so that Utah homeowners can continue to invest in solar and energy independence. Utah and our economy are the winners in this.

Rocky Mountains Power's corporate profit motive should not get in the way of the right way forward for Utah and sustainable energy practices for the population. The state government should want to encourage a self-reliant citizenry, competition in the marketplace, and the cleanest, most distributed power possible. RMP's desire to monopolize power production and transmission is the opposite of what we should want.

For years we have gotten "hate mail" from Rocky Mountain Power, telling us that we use too much power. We updated our appliances, switched out our lights, did everything we could think of to become more efficient. Getting solar was the answer. We no longer get hate mail from Rocky Mountain power! And feel that we are helping others by not taking from them.

I am opposed to the new rate proposal from Rocky Mountain Power. The proposal contains provisions that affect owners of rooftop solar panels, including an increase in the monthly access fee to \$15, as well as a "demand charge". If it is the Commission's desire to kill residential rooftop solar investment in Utah, approving this would be a very effective measure.

While I understand that Rocky Mountain needs to realize a profit, and solar panels are cutting into that profit, this company, which enjoys a near total monopoly safeguarded by the state should not be allowed to pursue short-term profit above people's health and the longterm health of the environment. Why doesn't Rocky Mountain Power better diversify its own business holdings, diversify more broadly into solar itself, thereby raising its profit AND encouraging job growth and more sustainable energy production.

Very concerned about the actions of RMP. Given the air quality issues we have in SLC it is important to allow residents to pursue their rights. We do not want to see solar killed off has happened in Nevada.

Pierre Prosper  
SLC, UT 84108  
Nov 20, 2016

---

The real question is not whether rooftop solar customers should be charged more, but rather, are they being adequately compensated for infrastructure they have paid for and the power they produce? It has been alleged by Rocky Mountain Power that regular customers are subsidizing rooftop solar customers. Quite the opposite. Rooftop solar subsidizes Rocky Mountain Power's consumption needs by providing power to the grid, creating a more resilient and abundant supply of clean electricity. In a time of fake news and media spin, it is unfortunate that a public utility service company would use such manipulative and misleading information to deceive non-solar customers into believing they are somehow losing out to those who have made the sizable investment in clean energy. Rooftop solar residents are not just consumers of electricity, they are now co-producers of energy, and should be compensated accordingly.

Trump ran an unappealing, hateful, fearful, vulgar, scandalous and shameless campaign full of subterfuge. Moreover his administration is surrounded by fascist with whom they associate - in a word despicable. It is unconscionable and sets a very bad precedence to permit someone to be sworn in as President with so much unknown and unresolved criminal issues.

Solar = jobs. The coal industry says that solar kills coal jobs. While that's certainly true solar (obviously) creates solar jobs. I'd love to see a study the compares jobs created to jobs lost by switching from coal to solar. Solar = cleaner air in the salt lake valley. Our air is terrible. It's disgraceful. It's dangerous. Starting with solar to offset our home energy production is a great first step towards using solar as our transportations energy source. What other options are there for cleaning up our air as our population double over the next few decades? Seriously, what other options exist? Solar = energy independence Utah is sunny. Extremely sunny. Conservatives and liberals alike should be very excited about the prospect of home grown energy. Rocky Mountain Power wants to kill rooftop solar because it's not as profitable as coal base electricity. While I can understand that as a good business move on their part, it ignores the social costs that we all pay from non renewable and unclean energy sources.

John Easterling  
Salt Lake City, UT 84105  
Nov 20, 2016

---

We need to make solar power more affordable not less. If more of us had access to renewable resources our environment would benefit greatly.

This is America, land that was built on Freedom, land that was built on sweat and tears. If a fellow American so chooses Solar Energy as their main power source, why penalize them? Congressmen/women of Utah - I ask you, why call this country the land of the free - yet, we can't even choose to use such an energy source that is available to us.

Nicholas Hornak  
Jackson, NJ 08527  
Nov 20, 2016

We kept getting letters from RMP saying this home was using way too much power compared to our neighbors. We tried more insulation, advise from heating experts, etc but the letters kept coming. So we spent thousands of dollars to install solar panels. We FREELY GIVE all our excess power back to RMP and now they want to increase our rates because their profit margin is shrinking and that is not acceptable to them. RMP is passing their losses to the consumers and blaming it on home solar production saying that we use grid both ways ~consumption and regeneration...instead of thanking us for our free excess power that they are able to sell

Elizabeth McKinnon  
Ogden, UT 84404

Utah's 4,000 solar employees would appreciate it if you don't put them out of work.

Marjorie McCloy  
Salt Lake City, UT 84105  
Nov 20, 2016

---

I would hope that the transparent study to analyze the costs and health benefits for Utah residents using solar energy be carried out, before Utah Public Service Commission ever takes Rocky Mountain Power's proposal seriously. It would be the fair and honest action to take. Don't let RMP gain a monopoly status in our beautiful state that is becoming more and more unhealthy in the air that we breathe because of this company's 'DIRTY' energy. Utah needs to start switching to clean energy use if we are ever going to start cleaning up our extremely unhealthy air quality.

Corporations doing business in a capitalist economy cannot monopolize the services they are providing to people and hold those same users of their service as hostage. Competition should not be feared unless this corp. wants the unfair and illegal advantage - they need to up their game and provide the better service rather than change the rules in their favor.

Soler is awesome and helping the environment. These is totally wrong to penalize the consumers of Solar to pay these stupid taxes and fees! DO NOT LET THIS PROPOSAL GO THROUGH!

Leslie Christensen  
Holladay, UT 84121

Nov 20, 2016

---

Amanda Madsen  
Cedar Hills, UT 84062  
Nov 20, 2016

---

This proposal is a thinky veiled attempt to allow Rocky Mountain Power to lock solar customers in to a bill that is a very minimal reduction from current bills. While one can pay off rooftop solar in about 5 years if they install it themselves, but with this proposal they save so little that they would never pay it off. Makes solar unattractive.

Dennis Edmonds  
Sandy, UT 84094  
Nov 20, 2016

---

This needs to be shut down! We are killing this planet with our dependence on polluting fossil fuels. This attempt to thwart development of solar power is purely for the financial benefit of Rocky Mountain Power. It is detrimental to Utah's and the environment.

I understand that at some point a critical mass may be achieved where solar customers may need to pay a service fee to assist in maintaining power grid cost, but that should not happen until that critical mass is achieved, in order to ensure as much growth in solar production as is possible. Please don't let Rocky Mountain Power prematurely disrupt solar deployment.

As someone who grew up in Utah and who still has family there, supporting green energy solutions for a state so suffering from the effects of pollution is an issue that is extremely important to me. This move jeopardizes these solutions' ability to develop and mature, and betrays the political priorities of our legislature: that is, big business, rather than the average Utahn. Solar power is not a catch-all solution to climate change or pollution in the state of Utah, but it has been a meaningful start toward those larger goals. Removing these supports will set Utah decades back in this fight for the health and long-term well-being of its citizens.

I believe that solar power on homes provides ALL Rocky Mountain Power customers with benefits of cheap power at lower costs than building new power plants. My bill has doubled over the past 10 years. With my new solar panels, it will remain steady for the next 20 years. My neighbors will benefit from my excess power production.

How can they stop residential solar when they have a solar farm. Not only do they have a solar farm but you can now rent part of the solar power instead of putting the panels on your home. It's the exact same thing as getting solar. Just minus the panels on your home.

The US economy has thrived because of competition and the prevention of monopolies. Utility companies are some of the few who have avoided the monopoly laws, and while I appreciate what they do for us, they need to realize that they are not the only option, and now that there are other options in the market, they can't just do whatever they want. They need to be accountable to market rules and laws just like every other company.

this is nothing more than a naked greed powerplay, that would hurt solar businesses and their employees (which I am not), the public interest, and the planet- the more green/solar power we all use, the less fossil fuels we have to burn to generate it. this would have a terribly adverse effect on the state, and show that like the state legislature, the UPSC is corrupt and bought and paid for by big business, in this case, RMP.

Please don't let RMP give disincentive to rooftop solar customers. Their solar farms are a great idea (long overdue) but a dispersed system is better yet. That way a MONOPOLY doesn't own the entire system we all depend on. Regulation is critical, not an impediment.

We can barely see or breathe during the winter. Our government should be doing everything they can to encourage solar. This does just the opposite. I signed up for solar a week before this was announced. If this change was implemented I wouldn't have been able to justify it and now if it passes I am worried I won't be able to afford it. With population growth and more energy needed our air will only get worse unless something dramatic happens. This is the wrong kind of dramatic.

I sell solar in Utah for part of the year and I return back to Idaho when the air quality gets bad in the winter. This is a real issue. My children have never been exposed to such toxic air and it's not healthy for anyone. I want to see our customers be given the same opportunity to thrive with solar savings as those of many other states and countries and not be subject to higher fees and penalties. Solar IS happening rapidly and it is the new norm. Please support your Utah residents in their attempt to clean up the air quality and reap the savings that they deserve.

Solar energy is cleaner than most of Rocky Mountain Power's energy sources here in Utah. Our smog filled winter air demands a call for more wind and solar. Solar customers help provide a source that stems to alleviate some of the need for coal burning plants. As Utah's population grows our demand for energy will only grow larger, and our sources for energy need to become cleaner. Home solar customers help provide that need, and this new change will reduce this growth, choking out clean energy from individuals, and replacing it with more profit for RMP. Consider the cost for Utah environmentally as we move forward to the future, and close down this attempt to stop this solar movement to cleaner healthier lives!

---

Even if the study Rocky Mountain Power's proposal is based on is accurate and unbiased (questionable), how is a Utah home's renewable energy source and reduced carbon footprint not worth \$400/yr to us? In our inversion months we have some of the worst pollution in the country (Salt Lake-Orem, Logan) that fact alone should clue us in to what should be our higher level priorities in this matter. Say no to the proposal. And while we do need to do our due diligence and conduct a independent study there is no way that the benefit side of the analysis won't prove to be worth billions (with a B) to our state alone.

Don't let Rocky Mountain power kill solar. They want to be the sole provider of energy. They want to charge solar users more because rocky mountain doesn't make as much money from them? How does that make sense? Rocky Mountain already zeros out solar users accounts right before summer when they're at the highest amount accumulated. They already received grants to build their own solar array and now they want to prevents house owners from having a choice. Stop Rocky Mountain!

Greg Arnell

Don't let them pass it! Provides too many solar jobs. Clean Renewable energy is saving Utah from its factories air pollution also saving homeowners so much money. People wanna own there power and hate RM increases and random fees, it's there Monopoly money and they will say whatever they have to to convince the state governer to charge everyone to keep there monopoly going! It's a forever bill let Utah residents and employees of 100 solar companies provide clean energy and millions of dollars saved that RM does not provide. GARY HERBERT I WOULD LOVE TO GIVE YOU A FREE CONSULTATION ON YOUR HOME ON THE BENEFITS WHY SO MANY UTAH RESIDENTS ARE GOING SOLAR, I WILL DESIGN YOUR HOME AND SHOW YOU WHY PEOPLE ARE MAKING THE SOLAR MOVE. I'm a manager with 1st Light Energy contact me if your interested in finding out for yourself. Thanks James Freitas 4359014532

Dear Utah Public Service Commission & Lawmakers: Rocky Mountain Power is trying to dramatically increase the cost of electricity for Utahns who want to power their homes with solar energy. It has proposed new charges on consumers who choose to install solar that: - Would be bad for business and will kill thousands of solar jobs in Utah. - Unfairly punishes consumers who are trying to save money by using less power - Would allow Rocky Mountain Power to take advantage of its monopoly by eliminating consumer choice, energy independence and a consumer's ability to do what they wish on their roof tops. The proposal by Rocky Mountain Power is the most aggressive, anti-consumer, anti-competitive and anti-solar proposal ever made by a utility in the United States.

Lisa R. Schneider  
Salt Lake City, UT 84108

RMP, you are being ridiculous! Solar is helping all of us breathe better, and you take enough of what we generate already, by fees and turning the clock back every year. It is obvious you care more about higher profits than the customers you serve. Keep doing this and you will lose us completely as we all buy the Wall, by Tesla. Be good neighbors, can't you?

Nov 19, 2016

---

we have spent thousands of dollars to try and make the air cleaner and to help rocky mountain not have to burn so much coal, and to use our excess power to serve other customers and all they can think about is making more money! That sucks and we won't stand still for rate increases! We have done our part to try to help this world and they need to stick with the program we signed up for.. You can't change the rules in the middle of the ball game..

Ryan, Heard you on Rod show today on KNRS. Something else I would like to point out. A large part of my decision to buy into solar was that it made financial sense. I am one that thinks of the long term. I ran the numbers myself, not just relying on the sales figures. I take daily outputs and do a monthly return on an investment to see when I break even. As with most people that agreed to solar, I was advised that net metering from RMP would stay how it is, and if it did change, we would be grandfathered in. I made a 20 year commitment in order to lower my overall of utilities, it seem hardly far for the rules to be changed. I am pretty sure I can go back to the installer and ask for a refund. So if this changes, I will be paying for solar and regular power. Probably one of the most annoying things is that I still hear...even on KNRS...the RMP marketing blurps about how solar friendly they are. I guess they are for solar...as long as they still get their profit.

We just got solar panels installed this week because the air quality in the SLC valley is disturbing and disgusting. It is often unsafe and nobody seems to care. Solar allows us to make a positive difference. Please to not add unfair taxes/fees to this green energy. We need to encourage people to get solar so we can clean up our air, not discourage it!

We invested almost \$19,000.00 for our solar system for these reasons: - to help the environment and Utah's air quality - increase the value of our home - save money on utility bills, but happily give our generated excess to needy households. We are asking you to disapprove Rocky Mountain Power's proposed changes to our previous agreements. This is UTAH, don't treat us like Nevada's solar residents and don't let them kill all those jobs either. Thank you.

The Actions of a Company either Non Profit or For Profit as Rocky Mountain Power is. Aught to first be based off of sound moral listening and responding for what is best for firstly the earth: as with out her generosity we would not be alive, and than all the living beings on the earth. The Rocky Mountain Power company's wish to make it impossible for Utah'n to chose Solar for their homes is based solely on the desire for Economic Profit. Their will be no profit for any living being if we continue to act out blindness for the well being of the earth.

As a current solar user, don't we provide electrical power during high demand usage? Like During sunny days. Then after the sun goes down when demand is less when we draw from RMP. RMP doesn't have to produce so much power because of lower demand. So why is RMP wanting to charge new and current users more for power that is helping RMP to help sustain business and home owners that do not have a renewable source. Aren't we or shouldn't we be part of RMP solar farm? I'm quit sure that the RMP solar farms are not going to charge themselves any of the purposed fees. Maybe they should. Do as I say, not as I do? RMP can build a solar farm but as a home owner RMP will charge you.

Is Utah really going to squash an individual's right to energy independence through government overreach and an underregulated monopoly? Can a burgeoning industry continue to thrive and meet the demands of the free market? If either of these questions are answered yes, it would be a drastic deviation to the economic principles and policies that are so loudly pronounced during our election seasons.

It is very frustrating to me that new forms of innovation like this are killed due to monopolies. Sure, the power companies maintain and manage an infrastructure that others are using when solar is implemented. However, I don't think that killing a sector of a burgeoning market is the proper way to do this. In my view, the power companies have missed the mark but not embracing solar sooner. There are many things they could have done but haven't. Why do we have to continually bail out companies that do not plan for and think about the future. Why? Because they have a sweet gig with NO competition. The minute there is competition, they try and kill it through the politicians. I am not a fan.

Jeff Jones

South Jordan, UT 84095  
Nov 18, 2016

---

Chase Messervy  
South jordan, UT 84095  
Nov 18, 2016

---

I don't understand the government. They are always trying to get us to conserve energy and when we do that they punish us for it. We have solar and we produce more than we use and Rocky Mountain power gets that extra for free. We shouldn't be charged more because we are doing what they wanted us to do in the first place. Good grief. That is like the coal companies penalizing people for using electricity. Companies need to adjust to new technology.

Lisa Sumsion  
AMERICAN FORK, UT 84003

Perhaps a rate increase for net-metered solar customers is needed. But relying only upon the data that RMP provides is not appropriate because their data is the product of a closed and biased calculation process. In order to fulfill the role of being a "public service" the Utah PSC should conduct an independent, thorough and fair analysis of the costs and benefits of residential solar electric production.

This is a terrible proposal. The plan is designed to charge these solar customers more. Besides, Rocky Mountain Power may be averaging a purchase rate of \$0.10/kwh, but they're reselling it to other consumers at \$0.15/kwh. They're making a profit off of every kwh the net metered customers produce, and they also want to charge them more per kwh they use. That sounds like eating the same cake twice to me.

Nov 18, 2016

---

I strongly urge the Utah PSC to NOT approved Rocky Mountain Power's proposal. I believe this proposal will be a death warrant for residential solar power in Utah. Residential solar power provides a net benefit to all residents, not just those with solar panels. We should be encouraging the growth of residential solar, not discouraging it.

I dont think its right that RMP should have the right to have control of people that want to be independent and that dont want to deal with someone increasing rates or tacking on hidden fees every month on their power bills. Everyone has the right to be their own source of power, not some multi billion dollar company. Its not right and unconstitutional.

Because Solar helps us keep the air cleaner, please take a careful look first at the time-frame for public comment re: RMP's (Rocky Mt. Power) Proposal. I would offer that to submit it on the day after the election with a very short review period does not serve the constituents of thee state well. (And suggests a type of 'rigging'.) Because this proposal is important to EVERYONE in the State- we need to keep a strong grid and seek healthier air- a more robust examination of the full issues and details of the proposal is wise and needed. Thank you.

I strongly oppose the proposed net metering fee. As a proud owner of a rooftop solar system, I feel that Rocky Mountain already benefits from my surplus energy (which goes into the grid without them paying me a cent for it) and I still pay them for what I didn't generate. They do not allow for me to be removed from the grid OR keep my power on in the case of a blackout. I should not, nor should other rooftop solar owners, be penalized or inconvenienced further than we already are.

Victoria Felt

This is unacceptable for many reasons. As a home owner that has Solar panels on my home to help the Earth, the last thing I expect is being punished for this. I will do whatever is asked of me to help support this horrible bullish move by Rocky Mountain Power. They should be ashamed of themselves for even thinking that this is the "right thing to do"!

Solar is a new and better way to provide power to our country. I hate when big companys try and squash the littel guys. We have 10's of thaousnds of family that this will affect negativly. I know that I Rocky Mountian Power is feeling treated. but isn't what our country is built on, the fact that we always have to up our game as a company? That way it provents monopilis from forming and causing all off us to have to suffer due to no competition in the market.

---

We can't allow Rocky Mountain Power to do this.

---

Kipton J Norris  
Syracuse, UT 84075  
Nov 18, 2016

---

Solar should be made available for everyone! RMP needs to stop monopolizing the market and give the public the opportunity to seek alternative clean power. RMP will never fully go out of business as there are situations that solar may not be feasible, but giving people the option should be available.

What gives the power company the right to forcefully steal money from a citizen who chooses to get electricity by other means? The concept of "use our services or you'll be penalized" is the same mentality of mobs, gangs and criminal organizations. The government shouldn't be a criminal organization but letting the power company bully and steal from citizens will make it on par with said organizations.

Our company sells solar in Utah providing jobs to local installers and saving consumers money as well as helping the environment.

Kyle Cherrick  
Los Angeles, CA 90013  
Nov 18, 2016

---

I recognize that Rocky Mountain Power is, to them, first and foremost a business intent on making money. But, history shows that there are opportunities for businesses to do what is better for the environment than for them. I would hope that, with a little pressure, RMP might step up and "take one for the (larger human) team" instead of being short-sighted and charging ahead with nothing in mind but their bottom line and increasing salaries for their executives. They are in the business of using resources, but their thinking is too channeled in only one familiar direction. That direction is madly irresponsible in light of dwindling natural resources.

Removing the choice of solar power to make individuals completely dependent on global powers is a UN Agenda 21 plan. We have already had laws enacted that take away rights for heating our homes naturally, collecting rain water, forcing tiny homes, regulating home gardens, natural foods and farms. The goal is to stop off-grid living and have complete control over peoples lives. I'm tired of government and UN agendas trying o stifle and govern my life. Rocky Mountain Power has no right to decide if I, or anyone else, should have access to solar energy. And one more thing, those governors, representatives and congress people who do not start voting for the freedom of the people instead of big business and UN agenda's, will need to be removed from office.

Let the solar industry flourish! Don't burden individuals with high fees for trying something different!

Debra Christiansen  
Blanding, UT 84511  
Nov 18, 2016

---

It is absolutely unfair for utility companies to inflict higher rates or fees on customers who use alternative energy sources. The utility companies already have a monopoly on the market and are scared of the competition that solar is making. Our air quality in Utah is horrible and we want to be able to cut down on the use of carbons for our energy. I currently live in an apartment but don't want to have the option of solar gone when I do get in a home. Also, if the government wants to eliminate incentives for Solar, and if the utility is completely unregulated, the consumer will not be able to choose solar as an option and this black cloud we live under will never be gone.

I would say this country need's to change it's attitude toward utilities, but it's only the wealthy investors trying to hold on to their increasingly unnecessary monopoly that need to be called out. Consumers want affordable clean energy, whether for the monetary or environmental benefits; that the two coincide has never been so blatant. The utility's revenue depends on a continuing justification for growth and expansion and there is now a competitor that demands reasonable people to wake up and put a stop to such wasteful arrogance. This proposed rate on solar customers is a tax on the environment and a tax on progress. Shut it down!

Seems like the advantages lie in keeping Solar affordable has more positives than raising prices. Not only does it employ thousands of people in the sector of renewable energies, but is helping chip away at Utah's air quality. Think big picture.

Travis Jennings  
Salt Lake City, UT 84115  
Nov 18, 2016

---

Don't abuse the system! Conduct a fair study transparent study for all solar! Solar has given opportunities and created thousands of jobs for many people in Utah and us states!

Gary Herbert and the majority of the Utah Government. I hate you all, none of you got my vote. But for the love of God, pull your heads out of your ass and allow the people you represent some freedom. Stop sleeping with the church, stop kneeling before every major corporation, grow some balls and do something right for once. The people will only overlook so many failures.

I am against the proposal that Rocky Mtn. Power is proposing. They are the monopoly in electricity in the greater Salt Lake area. They make tons of money. They are acting like they are the victims when they are the perpetrators. Their proposal will certainly hurt the solar companies who are trying to help Utah families become energy independent. Their proposal is counterintuitive to the environment, and counterintuitive to the Utah and federal state tax credits. Rocky Mtn. Power is developing solar arrays in Millard county and wants to profit from that energy production, however, they do not want individuals to benefit the same way they are. This is simply unfair and should be illegal. Block this proposal from being passed!

Sounds like Rocky Mountain missed the opportunity to support solar and also profit from it and now they are bullying home owners and solar businesses with their large market share. Rocky Mountain power has shown their true colors. They do not support a cleaner, more sustainable energy. They only care about profits and staying rich. Why punish someone who is trying to save money, and reduce their strain on the environment. RMP needs to stop being close minded, and stop feeling threatened by a new technology that has only recently become available on a large scale. Do you see car companies trying to punish Tesla owners. No. They are competing and working on their own technology, which is what RMP should do. Instead they are reacting like a spoiled child that never learned to share. **YOU DO NOT OWN ENERGY! THE WORLD PROVIDES IT IN MANY FORMS. GET OVER YOURSELVES AND STOP BEING GREEDY! PLEASE! DO NOT LET YOUR COMPANY BECOME AN ENERGY TYRANT.**

This is simple corporate greed being backed into it's last corner as the people demand cleaner and more affordable energy. This monopoly needs to learn to adjust to the terms of capitalism, and either lower it's prices for dirtier air, or Rock Mountain Power needs to step aside for the future.

The whole reason to invest and install a solar system is to save money. The proposed fees and increased rates defeats that purpose. Housing and business building are booming furthering the need for power. As a result, it's not necessary for everyone else to foot the bill of the solar users. If anything the the solar users should be paid for the power they over produce.

Please for the sake of UTAH do not pass this. It will not be good. RMP is already a Monopoly and makes millions if not billions of dollars every year. If this passes it will jeopardize the lives, jobs and families for a big portion of utah. This is a prime example of them being able to sell solar, according to their commercials and it being okay but for smaller local businesses its not ok. I say deregulate UTAH when it comes to power.

Dear Sirs, I'd love to actually write my own letter, but can't find the relevant input avenue to UPSC, so: A) I understand that the power delivery structure is changing rapidly, but this proposal by RMP is over the top. In a free market, there is zero reason why a customer's monthly bill should be charged at the rate of a small, peak-use period. This is forcing consumers, customers, THE PUBLIC, to pay for services which are not delivered, similar to underworld gangsters charging small business for 'protection'. In the corporate world, this is called fraud. It's simply a way to jack up profit while protecting RMP from competition and innovation. B) Air pollution levels are increasing radically in Utah's valley-centric urban centers, and even throughout southern Utah, where I live. While this is -partially- due to geography, inversions, and personal auto usage, the trend will continue to worsen unless cleaner energy sources are found for heating, lighting, and high-tech demands such as data server farms. RMP has demonstrated little innovative thinking, and instead seems intent on preserving an outmoded business model through legislation; the absolute antithesis of free market economics. Furthermore, this proposal targets RESIDENTIAL customers while ignoring industrial demand and billing rates. To say that it's poorly targeted is an understatement. Since corporate peak demand charges would create powerful political blowback, they're targeting individuals. Classic. C) RMP's proposal is clearly an attempt to stifle competition from rooftop solar by raising costs to consumers. But consumers who install solar already make a serious infrastructure investment. They're already paying five-figure up-front charges, to the business that actually delivers the service they purchase. And that's not RMP. E) Utah is one of the sunniest states in the U.S. Our UV indexes routinely hit 11 during spring and summer months. Depressing Utah solar innovation is foolish, shortsighted, and seriously counterproductive to the economic health of this state, because the long-term savings for consumers would be spent on other goods and services, rather than being funneled to RMP's dinosaur, next-quarter business model. If RMP was instituting a charge in order to fund solar panel farms, or solar conversion for customers, that would make sense. This proposal does not. F) Lastly, the Utah public's perception of the UPSC is that it's a rubber stamp for insider interests. It would behoove you to prove that you're not. Thank your for considering this input. Regards, SH Torrey, UT

Rocky Mountain Power increases power bills on an average of 1.8% annually over the past 10 years. This is disgusting. I want to have solar power energizing my home. It's time I become self-sufficient and be allowed to have clean, renewable energy powering my home. Net metering works. Do the right thing Governor Herbert! Do not succumb to the bought and paid for establishment or the rich power mongers like Buffet who don't even live in our beloved state. The money goes to them and their pockets. Show us that you're not one of "them" Governor. Be one of us, do what's right for us and out pockets. Please!

Allowing Rocky Mountain Power to move forward with its Proposed Net Metering Rate Update immediately is irresponsible. An independent study needs to be completed. Allowing the proposed rate to take effect on December 9th is far too soon. Installing solar panels on a home takes time: the process includes site surveys, loan application, city permits, interconnection approval from Rocky Mountain Power, and actual installation. Some home owners who are mid-process in solar installation (as we are!) may be placed in a difficult situation. Please consider requiring that these changes take effect in 2017 at the earliest. Thank you! Monica Archibald

Solar power is the future whether you like it or not, look at what Germany is doing and other Countries alike are doing as far as making that transition away from oil and coal. Big picture, we need to make a transition to renewable energy or we will eventually learn the hard way. Everything is energy so we need to stop greedy people from making a profit from things that is essentially should be free.

We need to encourage people to invest in solar, not discourage! I'm the father of two young daughters. My wife and I spent our hard-earned money last year (I'm a teacher) in an effort to help our air quality here in SLC. I find it shocking that any legislation would be considered that would discourage rather than encourage others to do the same!!

Charging those who are making an investment in renewable energy is ludicrous! RMP is greedy beyond words. Excess power produce by the solar panels is given back to RMP who then can turn around and sell this for a profit. This is what is called 'double dipping' and should not be allowed. You and RMP should be encouraging the use of alternative sustainable energy options not discouraging this important direction!

If we want to reduce greenhouse gasses, we need to make alternative energy more accessible, not more expensive. Penalizing people for using sustainable energy, while in Rocky Mountain Power's commercial interest, is not in the interest of the environment, alternative energy companies, or the average citizen of the state.

Rocky Mountain Power and the state of Utah should be making it more affordable and easier to obtain solar power. Our air quality and health depends on us finding renewable energy sources. This is just another way for big businesses to hurt citizens of Utah.

Sydney Richards  
West jordan, UT 84084  
Nov 17, 2016

---

The Solar Industry provides thousands of jobs in Utah, while bringing energy independence to the country. Killing an industry in its infancy to save an old dying industry that is causing mass amounts of pollution to Utahns is the wrong thing to do. The existing power companies generate their power from unclean sources that cause pollution in the valley and the state, increase chances of cancer significantly to the population in the area of mines, and power plants. Please don't kill the Solar Industry, we don't want Utah to become like China.

Lucas Cowell  
Salt Lake City, UT 84116  
Nov 17, 2016

Having a diverse energy portfolio is the only way to move forward in a rapidly changing climate, solar energy should be at the forefront of that portfolio in Utah. Further, it should be easily accessible and available for residents. Let us progress with the times, not digress, and we will be proud of the legacy and energy culture we leave behind.

Rocky Mountain has been anti-distributed solar for many years, so this attack on Utah residents should not be a surprise. However, I call on Utah's leadership to take a stand. Our air is horrible, and we can't let vested coal and natural gas interests curb the growth of distributed, residential solar programs. Show your leadership!

Diversifying our energy sourcing is good policy for emergency preparedness, for national security, for human health, and for the environment. Continually attacking any sort of support structure or rate hierarchy that leaves room for sustainable energy to succeed while continuing to subsidize fossil fuels at every point in their development and deployment is not just bad policy it's dangerous policy. Dangerous to our security and dangerous to our health. It's time to put the interests and health of voters ahead of those of energy conglomerates.

Michael Barille

I do not want these extra fees brought about for the following reasons: 1. We need solar energy in Utah to help with our air. With solar energy on homes more people can purchase electric cars and solar batteries that will help clean up our air. 2. If these fees are approved more people will purchase larger battery packs that remove them from the grid entirely. Over time, this will cost both the power company and consumers more as the power company will have to maintain the grid without the benefit of net solar power to customers that are further apart. This is not beneficial for either the power company or their customers. 3. Solar power owners already contribute money to the grid, but we also contribute energy. To lose both of these forms of revenue by forcing people to move to large battery packs would be expensive for the power company. No action should be even considered until after a 5 year study with both solar and non-solar homes included. Also, as there are a lot of people within Rocky Mountain that do not understand the way solar energy works, the study should include non-affiliated engineers, solar specialists, and Rocky Mtn Power personal.

I invested 50,000 in my system based on a set of rules and rates. If the system is going to change, I want RMP to repay my investment. I am helping the environment and reducing their investment requirements and now they want to punish the little guy. I also invested in a home generator because their service is unreliable. Would like to be paid for that as well. Want wheeling options as well if Utah is going to really consider this outrageous proposal.

States with sun need to be truly serious about solar energy so they are ahead of the problems when we run out of oil. Utility companies should be unable to discourage the PUC to support solar power. We're going to need it. Best to have it in place before it's desperate.

Mary N. Swersey  
Northern Arizona University, AZ 86001  
Nov 17, 2016

---

Now is not the time to de-insensitive people from going solar. This also goes against the interest of a free market. Utility companies already possess too much power,.

I am th proud owner of 8kW of PV on my roof and I am proud to be charging my electric car and him needs with them - doing my part to keep the air-shed clean. Distributed solar is one of the best immediate things we can do to address this - frequently surveyed to be Utahn's most pressing concern. The people of the state agree, clean air is a priority, and an economic necessity. RMP is a utility and exists to serve the needs of teh people of this state. Their current proposal would put a severe damper of rooftop solar and set back the cause of clean air in the state severely. And why? To preserve a polluting outmoded generation model and maximize company profits. The duty of the public service commision is to safeguard the people's interest's - which clearly lie with incentivizing and expanding solar generation - not curtailing it. Let RMP start paying the tue full cost of the pollution their outdated plants rain down on the people of Utah. For the public health costs alone, SOLAR is a no-brainer. Please do the right thing, for our future and our children....

Monopolies are a really quick way to ensure progress is stopped dead. With something that could be extremely beneficial to the state of Utah, this is an area that can not and should not be tampered with. We deserve the benefits that can come with advancement of technology, and the consumer competition that is still in its youth in this area. Allowing Rocky Mountain Power this legislation would surely stop progress in its tracks, and steal benefits from consumers and residents in Utah.

There are several driving factors for home owners to enter the solar energy area: 1) reduce reliance on fossil fuels, 2) improve air quality, 3) add power to the grid with excess power produced, and 4) reduce monthly expenses. Air quality is a major concern along the Wasatch front. With the addition of solar panels to residential/businesses, we reduce our use on fossil fuels, which make our air unhealthy much of the year (not just in the winter months!). With the growth expected in Utah, our power grid will need to be expended – possibly exposing residents to rolling black-outs similar to those experienced in California and New York. The use of solar panels by residents will reduce the need for Rocky Mountain Power to add to their existing power grid, thereby incurring additional expenses. In addition, Rocky Mountain Power has use of excess energy produced by solar panels. Peak production of solar energy is during the hot summer months, which is also the biggest drain on the power grid. Rocky Mountain Power has immediate access to the excess energy produced to sell to other customers. If the access fees are increased, it will make solar power unattractive to future customers. This will drive solar companies, installers, contractors, etc. out-of-business, thereby reducing jobs in Utah. Please do not approve this request.

While I don't have solar now, I would like to have it in the future at some point. I also believe in saving energy and not being wasteful on our planet. I don't care how much money they are losing; I care about our freedom to choose for ourselves (without any kind of penalty) and how we can be better to our planet. If only this planet mattered more to people than money. Nobody should have a monopoly on something either. Let's take the lead in our nation in saving energy in Utah because it's a good thing to do.

The entire reason for going solar is to benefit from renewable energy. The people who take the extra step to go solar shouldn't be penalized for it. Evening the playing field by raising prices is not fair to those who are trying to make a difference on their carbon footprint. If anything, raising prices on the people who have not gone solar would make more sense. This would incentivize people to go solar, which in turn helps with our environment. Let's not take two steps back after our first step forward. This fee spike will put solar at a stand still.

Renewable energy is the future. Stop the corporate fat cats from lining their pockets with our hard earned money. The way we have been utilizing energy sources for the past 100+ years was fine when we had nothing else to rely on, now that we do have other sources of energy that is clean, reusable, efficient and cost effective the methods of our past are no longer valid. It would be better for RMP to convert their attention from these outdated methods and channel it into becoming a part of the solution, instead they wish to increase the problems that this nation now faces for personal gain. This is a problem that needs to be addressed immediately with a strong public outcry for what is right and just for our future, our planet, and the entire human species.

Why must the consumer have to fight to get elected officials to do what is right?

Susan De Legge  
Salt Lake City, UT 84106

Nov 17, 2016

---

Do you want a monopoly to control your access to power, or do you want freedom to choose your source of power? RMP is fighting to retain its monopoly while hurting Utahns by implementing rate structures that favor the status quo and minimize the benefits of solar and clean energy. I want healthy air. I want clean power!

I have solar on my house and even though this tax would not affect my bill, I am standing up for my neighbor's rights to produce power themselves and reap the benefits themselves, not the power company taking away part of the incentive to install solar. The power company is a for profit business that is simply trying to make more profit.

I understand the issue of administration, customer service, and access. However, the request by Rocky Mt Power is excessive in the extreme. If we produce more power than we use, they get it free of charge. I am OK with a monthly fee (\$10) for the services. But, if we get paid for the extra power, it can offset those fees. Think how much the use of fossil fuels could be reduced if half of the homes in Utah produced 20% more than they used!

It's time to say no to RMP and enhance better benefits to those that use solar. I even believe that since I produce more than I use, power should no just be zeroed out but remebursed back at the same dollar per kilowatt. This is a RMP issue to move more of our concerned citizens away from the environment. please listen stop this BS.

I support reliance multiple sources of generating electricity and see any legacy power company encumbering developments of new forms of energy production as destructive to the future growth of Utah communities. As a home owner who has had solar panels installed, I have personally experienced obstructive behavior from Rocky Mountain Power in delaying the 30 min installation of my net meter (which delayed me using my completely installed panels by over two months) and refusal to credit me for the excess solar power my panels have generated and fed back into the power grid (which they resold to someone else). To allow further obstructions from RMP and other electricity providers in the form of extra charges or fees for those who take advantage of the wonderfully sunny Utah days while reducing the amount of coal emissions that enter and hang low in our densely populated valleys would show that the government and power companies do not have the best interests of the people in mind.

Net metered customers are not a burden on the grid - quite the opposite. Rate restructuring for ALL RMP customers is what really needs to happen. Rather than tacking the real issue, RMP is looking to penalize the small percentage who are net metered. Please do not support this move, which is backward thinking and will kill thousands of jobs in a fast growing sector in Utah.

Living in rural Utah, I'm struggling to make ends meet; working two full time jobs and cost continue to increase. I've been looking into solar power 1st to save money and 2nd helping the environment. Living next to a national park and everyone knows the restrictions there ~ If I had to keep warm by what the air quality is green, yellow or red like the Wasatch Front I would freeze. The power companies just want money, what are they doing to help better air quality; if people can't afford their prices, they burn wood ~ then the restrictions kick in ~

Solar is good for the economy and good for our air. Allowing residents to install their own and keeping the incentives to do so will help check the demand from a growing population. Rooftop programs aren't going to put Rocky Mountain out of business. It is not right to force home owners to be so dependant on this one company.

Why? A large part of our economy comes from the outdoor retail and activities. We already have enough concerns about how to overcome the challenges with our air quality and the decreasing amount of snow we have seen. Putting prohibitive costs on solar so the utility can make its revenue projections and annualized rate payer costs is a terrible reason to do this. We have the second cheapest power in the US (second to only another RMP state of Idaho). More expensive power is okay, so is solar. Let the free market operate here and stop trying to provide an even bigger monopoly to the utility.

While the nation is "hollering" for renewable energy sources RMP wants to penalize households for adopting solar power home systems. How wrong this is.

I will sign this petition because i dont believe in any crony capitalism. However ryan, i think that if you added specific statistics about RMP's proposals and then write about how each statistic would hurt Utah, Companies, and the People. Rather than throwing out these generalizations and generating a need to trust you know what your saying. I wish you good luck.

Those of us with rooftop solar have spent our own resources to help clean up the filthy air along the Wasatch Front - something that Rocky Mountain Power has refused to do. There is huge economic and social value in that. Don't punish us for acting responsibly. These rates hikes are not simple cost recovery - they are punitive and anti free market in nature.

Geneva Lawrence  
Salt Lake City, UT 84109  
Nov 17, 2016

I don't understand why you would want to digress solar energy is a great scientific finding and I don't think we should back track our steps you build on science you don't move backwards. Also it doesn't make any sense to get rid of something that helps the environment and its not a major company's decision to take other people rights away if someone wants to use solar in their home its their property they can do whatever they want with it. Also a lot of people will be loosing their jobs unless rocky mountain is going to hire them and pay them more than what they were being paid before I think they should just step down and quit making stupid proposals.

We have enjoyed the benefits of solar power for the last year. All solar energy that we generate and don't use is donated back to Rocky Mountain power. Our solar company, Arik solar also generously supplies panels to other needy institutions that they too might have solar power. I believe firmly that solar power should be a free option to all residents.

Monopolies should be illegal for money sucking corperte entiries as it is for everyone else. Energy is no different. If you can power your own house or city with clean energy, do it. Free. It isnt difficult to derive power and should be free. Nikola tesla designed a wifi towef a hundredd years ago that would power the world with free energy and only would have cost a little over \$100,000 dollars at the time to build. But thanks to Edison and the banking tycoons of the time, we all have to pay now, and depletes the planet of natural resourses.

I installed solar and went on-line in July of 2016 (at a cost to me - after State and Federal rebates - of nearly 10% of the current value of my home) . This system has eliminated my electric bill and offset it with an equivalent loan payment approximately equal to my former monthly electrical bill - that I will pay for twenty years) EXCEPT for the \$8 minimum fee (\$6 basic charge and \$2 minimum charge) the utility charges to remain connected to Rocky Mountain Power (RMP - aka Pacific Corporation). Although the claim is that I will be 'grandfathered' and allowed to stay on the current rate agreement; new users will be required to accept a new rate agreement. The new terms have not yet been disclosed; and there is no guaranty that current users will never be affected by the change. I can see the RMP concern: their antiquated short-sighted business model (that built infrastructure costs into the KWh rate) is becoming obsolete and no longer gives them the profits they planned for their shareholders, as alternative energy sources become mainstream. Yet they want to penalize and pressure these modern 'resources' to protect their interests. I get it; but the fact that they are essentially a monopoly, is the very reason they should be controlled to protect the public. Even now their powerful lobbyists have garnered concessions with the Utah Public Service Commission (UPSC). In the RMP service area, solar producers are only allowed a 'no cash value' KWh for KWh 'credit' for excess daytime (peak time) power production (other progressive states allow a cash value exchange). This power is resold (at RMP discretion), potentially to peak time users at a higher value than credit given the producer when needed for nighttime (off peak hours) use. Plus, they are under no obligation to allow producers to carry credits beyond March of each year; when at which time RMP 'zeros' any remaining credit for the year, and keeps the value (other progressive states allow credits to be carried or cashed out). These dubious practices alone, should garner RMP sufficient value to offset any impact to the value of utility infrastructure costs. Further, the growing impact of solar reduces pressure to build new power plants; which is likely one of the industry's largest infrastructure expenses. Also, the industry seems to forget that much of the 'short transmission infrastructure' is already paid for by homeowners, builders, municipalities and businesses as neighborhoods and retail/industrial zones are constructed. I encourage the UPSC to stand strong for the future of alternative energy production and fairness to those who seek to be part of the solution to becoming more energy independent.

What Rocky Mt. Power wants to do to Solar is the trifecta that will make a perfect storm for the death of residential solar in the SUNNY state of Utah. \$15 monthly charge, residential demand charge, wholesale reimbursement for net metered kWhs - any one of those would be enough to convince most prospective solar customers to decide not to get solar. Take those 3 charges together and it's a slam dunk!! Please save solar (jobs) from the fossil fuel industry and it's benefactors. Sincerely, Jim

There is zero truth...zero engineering , science that will validate Rocky Mtn. Powers claim. This is all about RMP maintaining a monopoly on solar installation. The Public Srvuce Commison needs to deny RMP and codeify a policy that encourages solar expansion in order to save and improve air quality in UT.

Funny how RMP says customers are overloading the grid, and put out coolkeeper device with a end of the year \$20 incentive, But now that customers are going solar releaving the overload of power surge, and the surge of money to the big dogs pocket, then they are just fine. Oh and coolkeeper still going strong. P.S. my panels kick in the best around the same time RMP complains about power surges which is at the peak heat of the day.

It is imperative that the opportunity to install and use residential solar power be not only maintained, but fostered and expanded. Distributing the load across the power grid simply makes good sense. In addition, despite the fears of old-tech power generation, all renewable power sources need to be folded into an intelligent and diverse energy strategy going forward. Bowing to the worst element of business interest on this issue is simply not an option.

Rocky Mountain Power is continuing their efforts to kill residential solar in Utah. One of the best ways to reduce a carbon footprint is to move to more solar and residential rooftops offer a perfect space for panels.

How can we allow a monopoly like Rocky Mountain Power to keep raising rates and hurt those who invest in solar? This proposal will kill competition and set Utah back. Solar is a small, but useful way to save money and slow pollution. This proposal is not the answer to Utah's economic or environmental needs.

Solar power is essential if we have any hope of improving our air quality in Utah. Rocky Mountain Power has demonstrated they would rather suppress new technology than embrace it to preserve their antiquated business model. Please help us prevent the State of Utah and Rocky Mountain Power from becoming a national embarrassment.

I'm disappointed that Utah if all places would be so short sighted when it comes to environmentally impacting issues. For a state to be so invested in helping it's residents to become self sufficient, yet allowing a power company to impose unfair and unfounded extra cost on those very residents that have invested in self sufficiency is completely ironic to say the least.

Please don't penalize those home owners who are going solar. I would think that solar is beneficial for the power company too, in that it takes some of the pressure off of the company to provide power for an ever growing population. Unless the company is only concerned about losing the profits off of those people.

Solar is just reaching the affordability point where financially it makes sense for the average resident to invest. As our air quality continues to erode we need more incentives to reduce our dependence on non-renewable energy. I agree, RMP needs fees to maintain the grid that the solar households still depend on....but let's be reasonable!

I put net metered solar on my rooftop last year based on the rate agreement I had with RMP. I am furious that they want to change that agreement. Also, my bill from RMP has all this stuff about how they are reducing their carbon footprint and how the customer can get involved in their Bluesky program or buying solar power blocks. I guess that is just "green washing" based on their stance taken toward distributed rooftop solar going forward. Also, a REAL study evaluating distributed solar benefits to the economy needs to be conducted. There are clear descriptions of valid methodology elsewhere, so I won't go into it here.

Currently solar in Utah makes sense, both to save money and help the environment. If Rocky Mt power is allowed to implement the proposed changes the future of clean affordable solar in Utah will die on the vine. Not to mention the jobs and boost to the economy this industry is creating.

Solar should be a \$10 monthly fee to help pay for the grid and thats it, the proposition on what the fees should be are way too high. The grid is for the most part a fixed, sunken cost and if the solar owners go battery instead of net metering, the cost for the grid would go up tremendously. The fair share for using the grid should be about \$10 total, none of this extra \$9 a peak kwh stuff. I own a small solar company and just from the news it is killing business and will have to lay off some workers and hurt the utah economy for sure.

Utah has an incredible potential for solar energy - to discourage solar PV - which is that RMP is doing - will be an incredible step back in evolution toward renewable energies - how can someone even think about this in a state where family, children and grandchildren - and their future life - are the backbone of society????

Please don't let your studies ignore the benefits of solar for Utah's citizens. Even citizens who do not install solar panels benefit from cleaner air (a major problem in Urban Utah), and less load on the electrical grid. The movement to charge extra to solar customers is on the wrong side of progress.

I just got solar. I've been telling people for years that the Power company is going to have to change their model to stay in business. Let's not allow them to change it in this way, it may make more sense to them as a company, but it doesn't make sense for the customers they serve, or the general population of the state. We need cleaner air. Let's encourage innovation, not stifle it.

Utah is famous for its horrible air quality. I don't think it would be wise to punish those who are actually trying to make a difference. Also, have you seen the National Geographic movie "Before the Flood"? I'm not being dramatic when I say that supporting solar is a matter of national security.

Mikell Heinz  
Provo, UT 84601  
Nov 17, 2016

---

Residents should have the choice if we want to go solar or not! Power companies use more water than a residential house would in a year. We need to do whatever we can to salvage our resources and reduce our carbon footprint

Aubrey grubbs  
Orem, UT 84057

SLC, UT 84124  
Nov 17, 2016

---

The path to clean air in Utah is solar--with over 300 days of sunshine a year, we could be the leader in the United States in solar production -- which would create more jobs and reduce carbon emissions. It's time to support solar, not penalize people who have it.

Rocky Mountain power is lying and just wants a monopoly. My power bill the last 2 months has been \$10. Go to Rocky Mountain powered website here <https://www.rockymountainpower.net/about/nr/nr2016/proposed-net-metering-changes.html>. Scroll to the bottom and see how many customers they lost. Also their review showing we rely on rmp and don't pay is a lie. We just don't pay as much as others as we are subsidizing our cost by generating. When my neighbors had \$300 power bills June-July 2016 we only paid about \$70 for the power we used. Ultimately rmp got into solar too late and wants to monopolize the system for all others. Power wall here we come.

Reduced pollution is good for everyone. When the big earthquake strikes SLC and power is out for weeks, having solar will benefit neighborhoods. I am in favor of subsidizing policies that benefit society (better air) and penalizing policies that harm. As is, the pollution forecast has a bigger impact on my activities than the weather does.

Stefan Hamilton  
Sandy, UT 84070  
Nov 17, 2016

Solar power has many studies and research to benefit the community as a whole as well as the power company. The only reason to charge more is because Rocky Mountain Power is after more money. We already pay a connection fee that covers what they already said is the maintenance to the grid that was required to maintain.

If households can create 25+ years of real electricity on their roofs without polluting, it is not only a rational choice for society to encourage, it is a responsibility as common stewards of this great land, especially considering the success of net metering around the country. The utility gets clean electricity without having to generate it, customers get cheaper electricity with more energy independence, everybody enjoys a cleaner environment.

There is always someone on the top of the hill and they'll fight tooth and nail to maintain the title "King of the Hill." RMP needs to stop fighting good, clean power technology. Why don't they change instead of trying to smack down people who want to make this world cleaner and who want to save their money from the ever increasing rates charged by power companies. The horse and buggy, the steam engine train, and ships all fell from the top as the methods of transporting people for necessity. Now they're for entertainment, because the automobile and airplane replaced them. Stop fighting new and better ways and start changing your model, so you can make money in a changing world instead of trying to keep customers in the 19th and 20th centuries.

As were rolling into a better form of free energy from the traditional energy more and more people are switching to or using solar causing these big companies to raise prices from people ever really saving money. That is not a healthy thing and a disgusting move on consumers and every day people that want to prosper.

Un constitutional to charge homes with solar any sort of additional fee of any kind. A lot of areas have a high flat rate, just be connected to electricity, but everyone pays it. I understand lines need to be maintained. Well everyone who pays for electricity should cover that fee equally. I don't have solar. But, believe anyone can do whatever they want on their own property. Something about freedom. Rocky Mountain will have to make sure whatever they do is actually constitutional. Not like Shell can legally charge me more for gas because I choose to buy a hybrid.

I believe in a fair market and if there is a demand for solar by Utah's residents, then let the market work. Don't stifle an industry we will need just because Rocky Mountain is afraid of some competition. (especially since a free market relies on competition)

Nicholas Marsh  
Murray, UT 84107  
Nov 17, 2016

---

Please keep solar power affordable in Utah!!! It's the future, and if we make it less attainable we're only hurting ourselves! Don't cater to Rocky Mountain Power's agenda, they clearly only care about themselves.

We just signed a huge loan putting solar on our home. We strongly believe in saving our environment and doing green as much as possible. We felt in the long term, we would benefit financially as well as decreasing our environmental impact. By increasing the fees of solar customers, because others haven't yet caught the vision of solar, it greatly impacts us financially.

Please do not take the choice for energy independence away from our community. Rocky Mountain Power is a Monopoly, why should I be beholden to them for life? They should not be allowed to affect the jobs of thousands of people since this most certainly will affect some businesses. Also, why should they be the only ones to offer solar? Isn't that in essence what this private hearing before a holiday will put in motion? It's sneaky and typifies corporate greed. Solar is the future the way mobile phones were to landlines. Holding people hostage and monopolizing the free market is wrong. This is nothing more than a way for RMP to continue to do what's best for them and their pockets. It's not what is best for the people.

Solar is good for Utah and the world!

Atim Ring Aru  
Salt Lake City, UT 84101  
Nov 17, 2016

---

Please stop this proposed rate plan change- it is VERY unfair and will be hated. The saving by solar customers is NOT being transferred as cost to trad. paying RMP customers. It is simply reducing over all demand on their infrastructure and power plants. They can buy solar Kw/h at 8.8 cents and sell it higher to 2nd and 3rd tier residential users, so they are already profiting off of it. To put surcharges and penalize solar is a step in the WRONG direction. Utahn will not stand for it.

This is a blatant attempt to increase profits and minimize competition and to pass on the minimal cost of RMP for the power these systems send to the grid. They get this energy for almost free and they pay very little for it. RMP is seeking to maintain its control over power and using this ploy to discourage the individual generating of power by those who have undertaken and will undertake the cost to generate power that is renewable and efficient and non polluting. In this day and age, the hampering of renewable clean energy should be criminal. RMP gets this power at little cost and sells it for much more. Thank you

In Provo the city council is considering the same sort of fees. All parties should be paying attention to the fact that solar customers reduce the load on the infrastructure, making it possible for the utility companies to serve more customers at a lower cost!

Ron Hathcock  
Provo, UT 84601  
Nov 17, 2016

As a consumer I'm still paying for electricity and though I'm seriously looking into solar, knowing that I'm still paying to be connected to the grid, paying going rate for short fall of solar and then having to give any excess power back to Rocky Mountain doesn't in any sense seem fair. They need to embrace all the possibilities of solar.

Solar power is a very important alternative energy source to create and maintain a cleaner and healthier environment. Apparently a cleaner and healthier environment isn't important to big business monopolies like Rocky Mountain Power unless of course it is owned by them like the wind energy power they offer. It also shows that rocky Mountain Power is not concerned about robbing our state of the jobs that solar power companies provide, causing an economic decline, all to take down the underdog in order to maintain their position on top! This proposal is completely ridiculous and very wrong! Just one more way big businesses prove that they are the ones really in charge of the country, just pulling the strings of everyone else including the government like a puppet master with with their puppets! Its disgraceful!

Discriminating against the fast adopters of new technology is not something that the Utah's silicone slopes wants to be known for. If "the cost of serving solar customers is nearly the same because they still need to use the power grid and rely on Rocky Mountain Power's customer service" then charge more for customer service (who even calls customer service for the power company anyway?), but don't discriminate with the power rates.

You, The Commission, have the responsibility to immediately oppose, remedy, and redact the current filing from Rocky Mountain Power with respect to Net Metering changes. Their position that roof-top solar has this amount of impact to all Rocky Mountain subscribers is completely speculative. Their inability to positively know this impact, based on their own testimonies acknowledging that the technology (in meters) cannot even inform them of it is grounds enough to oppose this filing immediately.

Rocky Mountain Power has been consistently asking its' customers to conserve power consumption with the ostensible goal of eliminating the need to build more power production facilities. Now they want us to believe they need more revenue because customers are reducing their power consumption. This is the same trick the San Francisco water district pulled when they asked everyone to conserve on water usage, then when people did conserve, the water district doubled their water rate. I can see that Rocky Mountain power is pulling the same trick just to increase their profit. There are power producers all over the country willing to sell power to any consumer connected to the grid. They lease line usage from each other and bill customers direct. Rocky Mountain Power isn't the only game in town. We just need our state regulators to recognize that fact and adjust the law to reflect that recognition.

Please do not let Rocky Mountain power pass this proposal. We need more options in Utah and solar is a way to get cleaner air which we all know Utah needs. You would be crazy to let Rocky Mountain power (the big guys) shut solar down. Basically if this proposal passes it will indeed make it nearly impossible for people to afford solar and it would not be economical at all for them. Utah would be shooting themselves in the foot if they let this pass.

Rocky Mt like most big businesses is going about this the wrong way. Instead of working with the consumer which could be a win win, they are only looking after their own affairs. They make a huge profit and are afraid of losing it. They can do like Kodak did, made a ton of money from film development and when the digital camera came along ignored it because they did not want to lose their profit but instead they lost the whole business and went out of business. Solar will keep growing so they can either get on the bandwagon or face constant opposition.

Heidi Moulton  
Syracuse, UT 84075  
Nov 16, 2016

---

I bought solar panels a year ago. They were an expensive and significant investment. Every few years my electric bill has gotten more expensive, as inflation happens. It is my hope that when I retire , my solar investment will pay off, and not go to an electric utility company.

Solar power is a very important clean energy resource. It is more important to clean up the planet than for Rocky Mountain Power to make more money.

Anna Marugg  
Pleasant Grove, UT 84062

Nov 16, 2016

---

RMP has been complaining that power usage has been going up causing them problems. Residential Solar is a solution but they are trying to kill it so they can make more money. they are a "Public Utility" supposedly serving the community. This proposal is just the opposite of serving the public. Please come down on the side of the public not the share holders of RMP.

Rocky Mountain Power is using their own one-sided study to support their claim that roof top solar customers need to be charged more. 7 out of 8 independent studies across the US say that roof top solar customers are a net benefit to the grid and should be compensated more.

Chantyl Smith  
West Jordan, UT 84081

Nov 16, 2016

---

In an area that is so effected by inversion and poor air quality we need to make clean energy more accessible to consumers. This rate increase will greatly hurt the growth of solar energy in Utah. Rocky Mountain Power enjoys a monopoly in providing electricity to many, and this action seems to indicate that they see the solar industry as a threat.

Carly Stocks  
Saratoga Springs, UT 84045  
Nov 16, 2016

---

Olena Zhuravlova  
Sandy, UT 84094  
Nov 16, 2016

---

A real non-bias study is needed before a aggressive change like this should be approved. Is as Rocky Mountain suggest, solar users are not covering the connect fee, then why not change the connect fee instead of a major rate change? This is anti-competitive.

I currently own solar power panels on the top of my house. I'm a proud member of the alternative energy movement. We need to keep alternative energy alive and well in Utah, and the current legislation proposed by Rocky Mountain power will negate much of the Financial incentives for individuals across the state. I am against the current legislation proposed by Rocky Mountain power.

I could be wrong, but doesn't the Sherman Antitrust act prevent Rocky Mountain Power from "exert complete control over a market" and from "monopolistic practices"? The purpose of the Sherman Act is not to protect competitors from harm from legitimately successful businesses, nor to prevent businesses from gaining honest profits from consumers, but rather to preserve a competitive marketplace to protect consumers from abuses. Which is exactly what RMP will be doing if they succeed with this.

We are asked to find alternate methods of power to help our planet. Then when an excellent, clean, quite alternate method is found (solar), the power companies yell foul because they want our money. Let us use the power source that is free to all by using the solar power technology that is now available. Don't kill a great initiative.

Nov 16, 2016

---

Any action that inhibits the progress of returning clean air to our valley is harmful to our children, our elderly, and Utah's reputation as a health conscious state. I do not believe that the fossil fuel industry is evil, malicious or even unconscious. I believe that their interests are valid and need to be considered. However, their success should not come at the expense of those that are trying to do what's best for their children, their wallets, and their community as a whole.

As a current owner of solar, and having ran the numbers, it would have taken me 20 years to "break even" if my solar had been installed for me. That's practically at the end of the warranty of the system itself. I installed my own solar at significant cost reductions for doing so and it would still take at (optimistically) 9 years to "break even" under this new policy. Most can't provide this level of self-service and will effectively be shut out of using renewables due to this monopolistic move.

This is a move by a monopoly that serves only their private interests, not the public. This targets a business sector that has been at the top of the charts for job generation in the last five years. This proposal damages the ideal of freedom in markets.

Jacob Colvin Walker  
Provo, UT 84604  
Nov 16, 2016

RMP is already saving millions of dollars by not having to bring more power on line at peak times because of the benefits from solar power. Do you all remember when RMP installed the extra box on the side of your house and gave you \$20 a year to allow them to shut off your Air conditioning at peak mid-day power cooling time? Solar power is helping this issue in a major way. What is RMP saving due to the mid day solar power infused in the system? What does another power plant cost maybe \$700 million. Please arrange to refund this savings to the solar providers! Solar power owners invested \$20K to \$30K to reduce costs and not allow a monopoly to profit from our investment. We already allow them to steal any excess we generate every year and they already charge us over \$100 per user each year even if we use no net power from RMP. Please don't allow the commission to approve this damaging RMP scam!

RMP is trying to monopolize the energy industry in Utah and if they are allowed to proceed it will make them richer while penalizing customers. Solar is expensive but I bought it to do my part to help reduce the horrible pollution we suffer from the inversions. If the thanks for that is to make my energy saving investment worthless, it's time for me to move to a different state.

James Fogerty

Nov 16, 2016

---

I am extremely disappointed in Rocky Mountain Power. I do not support any company that attempts to legislate their competition. In this case, however, I do not have a choice but to give them my hard-earned money each and every month. There is nothing I can do about that, and they know it. Now, there is a viable option to, not only help the environment, but help me personally at the same time. I WILL have solar one day. Rocky Mountain Power was built on the backs of the people of Utah, and now they are throwing that in our face. Do NOT allow them to bully our citizens. It is wrong and they know it. They are simply too greedy to accept it.

Ryan Rounds  
Riverdale, UT 84405  
Nov 16, 2016

---

This proposal unfairly targets solar users. With utah's horrible air quality, we can't afford to kill off solar in our community.

Michelle Campbell  
South Jordan, UT 84095  
Nov 16, 2016

---

This is the 21st century. Stop the big companies like RMP from going forward. Stop lobbyists from getting whatever they want. Solar is the future. Greed is king in this country & our state. It's disgusting.

Blake Stephenson  
Provo, UT 84604  
Nov 16, 2016

---

Rocky Mountain Power has constantly and consistently been dependable for one thing: looking to pad their own bottom line, at the cost of anything and everything else. This move is a reprehensible money grab and it's best. They're barely even trying to veil that fact anymore. If they want to charge more to solar customers, they should likewise give fair credit (the going rate) to customers to their extra energy.

Madelyn  
Millcreek, UT 84124  
Nov 16, 2016

---

A global effort to shift away from fossil fuels is required of us all. While the majority of inversion/smog in the valley may lay mostly with vehicle emissions, this does not mean that we shouldn't do all WE can as a species to move away from NEEDING to burn coal for electricity. RMP, in this instance, is doing what Capitalism requires of them: Protecting the Power and Profits of their Monopoly. If ever there was a place for the Government to NOT allow a Monopoly an even tighter stranglehold on it's "customers"..

It seems RMP likes to talk of the benefits of being green but not if it is with someone other than RMP. They may raise their rates but it will, I believe, in the end simply push residential solar companies to get users of solar completely off the grid which will cost RMP and their users. This seems like a short term answer they are seeking.

I dont think it is right that Rocky mountain power should be able to raise my power bill up just because I got solar panels. I live paycheck to paycheck and do what i can to keep my bills down and do whats good for the environment. Now they want to penalize me and everyone else with solar panels. That is just wrong and maybe they should be penalized for their price hikes.

For me, solar is an important step in the movement to be self-sufficient. I know it doesn't help the utility company's bottom line if I go "off the grid", but that sort of zero impact lifestyle is the direction we should be heading. Solar farms, wind farms, etc have the potential to become terrorist targets, and also vulnerable to natural disaster. Conversely, thousands and thousands of residential rooftops would be much harder to disrupt.

Why can't RMP just allow people with extra roof space to produce extra power and buy it from the homeowners at a wholesale price rather than build more electric production infrastructure themselves? WIN / WIN. What am I missing? Lets work together to clean the air and save the planet!!!

Please get both a solar industry study on the cost of solar to non-solar customers and an independent third party report to consider before making this decision. Dont rule on the matter after only hearing one side of the argument from a VERY interested party (RMP).

Rocky Mountain Power needs to be dissolved!

Tyler Larsen  
Centerville, UT 84014  
Nov 16, 2016

---

Solar power is good for the people, the state and our environment. Individual home owners should and do have the right to install and benefit from solar power. The same applies to all businesses. As a Commission, your job is to do what is best for the people, not a business that is a monopoly. We hope and expect a vote and decision that the people and our Utah State government supports.

There is a FUNDAMENTAL FLAW in the data that Rocky Mountain Power is providing to support this: THEY gathered the data instead of a non-biased unaffiliated entity. They are not impartial. They are biased. They are protecting their monopoly. It is wrong to shut down an industry simply because another industry wants to protect their monopoly. I'm calling for an unbiased study. The following entities should work to protect and incentivize consumer choice for environmentally friendly solutions, such as solar if they so choose: Public Service Commission, Utah Office of Consumer Services, Utah Division of Public Utilities, The Utah State House, The Utah State Senate, and Governor Gary R. Herbert.

Rocky Mountain power has a Monopoly in the area that I am in. In the last nine years they have raised the rates so much that my summer bill is now almost \$200 more a month than it was nine years prior. I have spoke with Rocky Mount power about it and have had technicians come and check my meter. I am very power conscious, and it all comes down to the raising of the rates . It would be unfair not to let consumers choose a different source of power .

This is a pretty ridiculous and cowardly effort for Rocky Mountain Power to monopolize the market instead of competing fair and square like every other company. Solar has created thousands of jobs for people all over the nation, especially in Utah. This bill will only cause layoffs and closing down of numerous small businesses.

PacifiCorp's claims of unfair cost-shifting are false. An actual study of residential solar production proves that the cost-shifting is going the other way: solar customers \_are\_ reducing their peak load on the infrastructure. Look at the details in the testimony and you'll see for yourself PacifiCorp's perfidy.

Impact To Our Community Rocky Mountain Power's proposed rate increases will have a direct, negative impact on our community in three specific ways: Bad for consumers – This is an unfair move by a monopoly to punish Utahns who are trying to save money via residential solar. The new rate changes will almost triple the amount of time it will take these consumers to break even on their solar investment. Bad for air quality – This measure makes it clear that Rocky Mountain Power cares more about its own bottom line than it does for our community and the health of Utah residents. Utah has one of the worst air quality conditions in the country and solar is part of the solution. Bad for business – This move is particularly dangerous because Utah is such a pro-business state and the residential solar industry has been one of the largest and strongest sources of job generation over the past 5 years. Given the impact this new rate increase will have on customers, the impact on solar jobs focused only on Utah customers will be devastating.

This measure will effectively kill solar in Utah. Thousands of jobs will be eliminated. Customers will lose their ability to choose and forever be under the thumb of the RMP monopoly. The environment will continue to suffer. This is purely un-American. No one wants to be dictated to. This proposal is morally wrong and inherently evil.

Scott Young

Nov 16, 2016

---

All of my family live in Utah and chose solar to help them save money on increasing electric costs. By allowing RMP to kill solar we only hurt our freedoms to chose where and how we get our power. Please stop this proposal.

Cole Everitt  
Wilbraham, MA 01095

Nov 16, 2016

---

The worst part is the lies RMP is spreading all over the news stations about how solar systems come at the price of non solar customers. My solar system generates enough power in the summer to run the AC systems of 4 of my neighbors homes in the summer at peak load. My system reduces the peak, helping everyone, but the truth is, this affects their profits.

Scott Jeffery  
Riverton, UT 84096  
Nov 16, 2016

---

Protect solar!!!

Rachel Whitlock  
Orem, UT 84058  
Nov 16, 2016

---

This isn't right... Solar systems done right already cost more that regular grid electricity. People who are trying to live green lifestyles are already paying more and now you want to penalize them?

I plan on getting Solar next year when I buy our new house. I also have been involved in this industry for 3 years and it has been a huge benefit to allow me to provide for my family. I am very passionate about Solar in Utah and have enjoyed seeing many Homeowners save alot of income for their families. People who have solar love the opportunity to be independent and doing there part to help our environment here in Utah.

Already have solar installed. Love it, and encourage others to use renewable energy!

Gordon Gridley  
Syracuse, UT 84075  
Nov 16, 2016

---

This is why you dont allow private organizations to have a government supported monopoly. Greed tries to push out whats best for the people that the government is supposed to support. Stop taxing the sun! Just dealt with this for Provo Power and they are at least giving it some more actual research to find out what the real cost vs. benefit is. It should be a given to do that first, so RMP needs to do the same.

Please do not allow Rocky Mountain Power to charge solar consumers more for trying to live better and to help the environment. Rocky Mountain Power is trying to dramatically increase the cost of electricity for Utahns who want to power their homes with solar energy. This would destroy thousands of jobs, consumer energy choice, major benefits to our environment, economic growth and cost benefits to solar consumers in the state. The proposal is the most aggressive, anti-consumer and anti-solar proposal ever made by a utility in the United States.

We have solar on a new house we just bought (through vivint solar) and it was a big plus for us that the house had solar. It makes sense and is cost effective and I don't support anything that would block solar from being competitive in Utah.

Damon Janis  
Mapleton, UT 84664  
Nov 16, 2016

---

RMP should look to other states and large utility companies (PG&E) and learn how they've found a way for solar to be beneficial to both the consumer and their company. If they spent more time adopting processes of efficiency rather than trying to cover their inefficient costs we wouldn't be faced with this solar threat.

Rocky Mountain Power has their selfish benefits at heart, and their proposal is detrimental to the economy and environment of Utah.

Logan Darger  
Draper, UT 84096  
Nov 16, 2016

---

i don't understand why you would penalize people who are trying to do better for this earth. Solar energy should be celebrated, not looked down on. Trying to bully an industry that is actually better for the environment is such a step backwards for society. We should always be striving to move forward.

Faletoa Sua  
Provo, UT 84604

Travis Johnson  
West Jordan, UT 84088  
Nov 16, 2016

---

Public Utilities are there to serve the public, not have the right to hurt a state industry that effect their bottom line. This proposal is terrible for Utah and Utah jobs. They lose revenue on those that go solar, but the growth rate of new homes is higher than that of those going solar, so really they just don't get to grow with the growth rate, which means they also don't have to build more power plants. Every group has their day to grow and flourish and all also have their day to eventually take a back seat to innovation. Just ask the train companies, phone companies, and VHS, DVD, CD companies.

We invested in rooftop solar for economic, and environmental reasons. You will be punishing people for making a decision to spend \$20,000+/- to be more energy independent. That is a lot of money going into the Economy and it has the added benefit of removing CO2 from our already filthy air. Do you support big business? Or personal freedom?

Rocky Mountain Power is using their own one-sided study to support their claim that roof top solar customers need to be charged more. 7 out of 8 independent studies across the US say that roof top solar customers are a net benefit to the grid and should be compensated more. Rocky Mountain power has a monopoly that is granted by the state and needs to go through a rate case hearing if they want to change the rates for any of there customers.

Allowing RMP to monopolize solar is insane. The solar industry in Utah is huge and provides a ton of jobs to residents in Utah! People will lose their jobs because RMP wants to give money to their shareholders! This has nothing to do with them trying to not pass the buck to non-NEM customers. I have barely seen an increase in my power bill, and I'm sure the majority would rather share the miniscule increase in my bill to avoid pushing companies out of Utah

Rocky Mountain Power is trying to dramatically increase the cost of electricity for Utahns who want to power their homes with solar energy. This would destroy thousands of jobs, consumer energy choice, major benefits to our environment, economic growth and cost benefits to solar consumers in the state. The proposal is the most aggressive, anti-consumer and anti-solar proposal ever made by a utility in the United States.

I am a part of the solar industry and have seen what happened first hand in Nevada and Arizona when actions like this take place. Thousands of lost jobs, an entire industry destroyed within the state. The claims made by Rocky Mountain Power are simply scare tactics used by monopolies who want to keep control at any cost. For me, that will mean the possible loss of my business. Veterans from Hill Airforce Base are being trained for solar-related jobs to help transition them from the military to the open job market. If the commission cares about Utah, it will shut this madness down!

Stop suppressing alternative energy that can help limit the destruction humans are causing this planet. There is more to existence than monopoly, money, power, and greed.

Kim Bessler  
Lakewood, CO 80228  
Nov 16, 2016

---

Stopping solar in Utah is like saying, "I want to continue to destroy the environment and the air we breathe for future generations." This proposal against solar would not only be a step backwards but it would also take away jobs opportunities for many people. I strongly urge the Utah Public Service Commission to do the right thing and keep solar in Utah, not just for the good of the state, but also for the sake of our children's future.

Maybe all can contribute to the infrastructure but RMP should encourage the use of solar and not penalize those who opt to take it on. The outcome will be these people disconnecting from the grid and then RMP will surely regret having chased them off. Batteries for homes and generators are coming down in price and becoming more available for all. Don't kill off your helpers.

With the recent promotions of solar installations in Utah, let's avoid being two-sided as a state and punishing solar companies and their customers for promoting and investing in renewable energy without taking a good look at the benefits of solar and the consequences of cutting it. Please choose to perform this cost-benefit study.

Punishing customers for wanting a cleaner alternative source of electricity is crazy. This would be like fuel companies charging higher gasoline prices for hybrid drivers. This is a destructive ploy by a monopoly to keep its hold on the throats of their customers and thereby ensure their continued monopolistic hold. It must be stopped.

The proposed document by Rocky Mountain Power is an absurd step in the complete wrong direction. It benefits no one but the utility company themselves and neglects not only solar home owners, but the planet itself. Solar is the next big thing and Rocky Mountain Power is scared. Why? Their profits. Nothing else matters to them, this is the bottom line and it is appalling.

I understand the utility company needing to stay afloat, but there is no reason to make customers of solar pay more for a decision that was made to save the environment or for personal reasons. By them doing this as well, they are potentially putting people out of work and making those individuals as well as current solar customers fall on hard times because of their greed.

It is a straight violation of conflict of interest by having the very company that sees the benefits of this bill conduct the investigation. We have seen it many other times. One example would be the asbestos industry. Adverse results threatened their own profits and resulted in turning a blind eye to the health risks associated with asbestos. Of course they would throw out key data points that were not in favor of their interests. This bill threatens my family and me and our livelihoods.

I have solar on my home covering about 70% of my usage and an electric car in the garage. Both of these are our families effort to reduce reliance on coal and gasoline. Every other citizen should have this right to do what is right. My payback on the solar is around 12 years and probably never on the car purchase but I used my wallet to do what is right. Don't let a monopoly like RMP destroy the open market for solar.

Rocky Mountain Power is attempting actions that will have a significant, negative impact on solar power in Utah. Solar energy is one of the cleanest forms of renewable energy, offering the least environmental impact and the greatest potential to further our energy independence as a nation. Utility companies are moving to block solar and make it less economical to invest and develop solar in order to maintain control over the energy industries as a whole and maintain a monopoly on energy production and distribution. Rocky Mountain Power strives to maintain control over the production of clean, affordable energy by restricting access to it by the average consumer. If successful, they will eliminate competition, drive up prices, and keep affordable energy away from the vast majority of consumers. Over the last year, Rocky Mountain Power's sister company used a similar tactic that effectively killed 99% of residential solar in Nevada. Now, Rocky Mountain Power is trying to do the same thing in Utah, by asking the Utah Public Service Commission to approve one of the most aggressive, anti-consumer, anti-competitive, and anti-solar proposals ever brought forth by a utility in the United States. The Commission is required to study the costs and benefits of residential solar in Utah. Most states have found that residential solar provides a net benefit to everyone, not just solar customers. In proceeding with this action, Rocky Mountain Power is deliberately ignoring the full benefits and demonstrated cost-savings that they and all Utahns receive from residential solar. Utah deserves an open and transparent cost-benefit study. I call on Governor Herbert, the Utah Legislature, the Utah Public Service Commission, the Utah Division of Public Utilities, and the Utah Office of Consumer Services to reject Rocky Mountain Power's proposal. I ask the Commission to conduct a robust and fair cost-benefit study so that Utah homeowners can continue to feasibly invest in solar power and foster greater and energy independence.

Phil Johnsen  
Riverton, UT 84065  
Nov 16, 2016

This proposal is very one sided. Rocky Mountain Power is not factoring in the fact that solar installations produce power at peak energy times when the air conditioning load is at its highest during the day. If this were factored in I'm sure these costs would not need to be nearly as high. They are also not factoring in the huge benefits from pollution reduction that solar provides. Millions of dollars are lost each year in healthcare costs and decreased productivity associated with air pollution here in Utah especially along the Wasatch front where the vast majority of citizens live. I feel our government officials should be doing everything in their power to clean up Utah's air pollution problem. Promoting solar instead of crippling it is what our elected officials should be doing. The solar industry produces a lot of high quality jobs right here in Utah. This industry will continue to grow as long as regulations are put forth that promote its expansion. Don't let what happened in Nevada happen here in Utah.

Letting the utility company raise the rates if someone chooses to receive their power from another source is unconstitutional and violates my rights to choose where I do business . If the new proposed Rocky Mountain power rates pass for Solar customers it will put Rocky Mountain power as a monopoly which also violates federal laws and my constitutional rights as an American. Plz throw this out. This should not even be considered.

I have rooftop solar on my house and generate enough to where I basically donate over a megawatt hour in excess to Rocky Mountain power at the end of march when RMP zero's out the net metering. They still get Benefit from my power production every year from my excess production. I know there are many people that over produce just like me and RMP takes that power and uses it for their benefit. I'm tired of RMP being a monopoly and doing whatever they want!

Please reject RMP's proposal. And at the same time, can we please prevent the same thing from happening with Provo Power. This would absolutely destroy the solar industry in Utah, and the thousands of jobs attached to it. We need to take advantage of renewable resources. Everyone here is well aware that the air quality in Utah suffers regularly. Anything we can do to help with this is something we should be pursuing! A conversation I had with an RMP employee earlier this year rings heavily now. They said, "People haven't been happy with us in the past. We're doing what we can to up our customer service game. People have choices now--they can get solar!" Well... this would eliminate those other choices from being contenders now, wouldn't it?

The disturbing trend about large businesses, like that which Rocky Mountain Power has become, is that often times, when they become the only viable choice in town, they aggressively seek to block out peoples ability to make other viable choices when they come around. These choices are not always good for the people they are affecting. Solar, as well as other renewable sources, may not be capable of feasibly powering this country on a large scale just yet. What it can do, is power individual houses. The money obtained from these houses, going into not just spreading solar energy, but also towards funding the discovery of new advances in solar engineering. Set backs like this slow progress, for the sake of filling the pockets of those who are already in power. If allowed to progress as a CHOICE to consumers, unhindered by a shady "cost-benefit study" with parameters of what values matter most determined by Rocky Mountain power, we could see some amazing advances. I would be very disturbed to see something like this issue be allowed to pass, and am watching the results of this decision very closely.

Solar was a goal for us for a lot of reasons. We both work hard and to loose the cost benefit now, just after getting them installed would be really bad for us economically. RMP has a monopoly here in the state as, usually, the only option for power. Let consumers retain some measure of flexibility. Don't forget that what we produce and don't use they distribute to others on the network. We might get a bill credit but it doesn't roll over and we are neaver getting money for it, so that is a good deal for them. There is extra power in the system for them to use without having to produce or carry it long distance.

This is contrary to what has been proposed by the power company. They have sought the people to contribute millions to them so they could develop their own solar power in the Blue Sky program. And they recently announced a large solar array that consumers can buy into. Their thought is that residents can ONLY use solar if it goes through them. When it doesn't, they want to penalise those people -- and they want to receive that money described as fees. This is against fair trade and they want to make them a "legally" recognised "monopoly" when it comes to solar. We don't want solar to be anywhere near a monopoly! If solar is good for the power company to develop, it's good for the consumer. Don't be hoodwinked by the power company. Don't let solar be monopolized! If we need more power in our area, let the consumers develop it. Don't let the power company fool you into thinking that they are the only one that can develop it. Take away the thought of monopolizing solar! Don't let them confuse you by spinning it around and saying it is for the consumer's benefit to monopolize solar.

There is no basis for making these changes. Numerous independent studies have been conducted that have concluded that distributed generation provides a net benefit to the grid. To even consider these changes is a step backward for Utah.

I am 100% against Rocky Mountain Powers' smoke and mirror show to gain more market control. Utah has quickly put itself on the map as a solar friendly state coupled with our strong work ethic. It doesn't take much time to research what happened in Nevada and see the disastrous effects it has had on the workforce. I take great pride in being in a Utahan, born and bred, we create jobs not to kill them! We as a human race should do everything in our power to embrace and develop clean energy. Please stop this ridiculous proposal.

Skip Tippetts

Rocky Mountain Power is proposing one of the most business- and consumer-unfriendly rate changes for solar customers anywhere in the world. I urge the Utah public service commission to reject this proposal and instead encourage Rocky Mountain Power to work collaboratively with solar companies to craft a more reasonable proposal that will allow consumers, solar companies and Rocky Mountain Power to succeed.

Let us keep our jobs and continue the growth in Utah.

Scott Whiting  
Farmington, UT 84025  
Nov 16, 2016

---

This is a desperate attempt by Rocky Mountain power to prevent residents of Utah from saving money only due to RMP's fear of business. I personally work in sales for Clear Solar and would be personally effected economically and in my career along with thousands in Utah. Don't make the same mistake Nevada did. This is a sure way to enrage countless Utah residents and solar companies. If you want to hurt the economy in Utah, then by all means proceed with this nonsense. If you want to see more jobs created and more Utah residents saving money by using renewable energy, then discard this notion.

I disagree with changing the way net metering currently works. You shouldn't have to pay a few if you choose to go solar. This hurts fair completion in the state of Utah and only helps Rocky Mountain Power maintain their monopoly. The people of Utah should have a choice to choose solar power without consequences.

Michael Otterson  
Vineyard, UT 84058  
Nov 16, 2016

---

This is crooked and unethical for a monopoly to impose hefty fines for someone choosing to not use them. Shame on RMP! This should be illegal! We should force RMP to actually pay all the thousands of customers who put power back into the system that they get for FREE!!!

I have solar power and I know I generate much needed power in the summer peak season when I and my neighbors are all running our air conditioners. Rocky Mountain power gives me The required credit and sells that power to my neighbors in a tiered structure that benefits them financially. I don't want to hear that I am costing RMP money that has to be made up for by non-solar customers. Lets have a fair and impartial study conducted by a third party that takes all factors into account.

Steve Mouritsen

Utah would be the the very worst state in the country for solar if this is passed. A demand charge based on peak usage is crazy completely unfair and would kill solar in Utah. Think about someone considering solar and wondering what their fee would be, "well if you ever had the air conditioner your dryer and light on at the same time it's going to be crazy high" Please protect our jobs, our right to choose, and protect against a Monoply that is trying to take advantage of their unfair position against consumers and solar workers and customers like myself.

RMP has numerous benefits that come from home owners privately owning their own solar. Please don't allow them to shift the positive movement of clean solar away from the path we are on. If we allow monopoly driven agendas to pollute our attempts of course correction from the destructive effects that come when the right path is ignored.

Rooftop solar is citizen solar, not corporate monopoly solar. The Berkshire Hathaway utilities, like Rocky Mtn Power and Nevada Energy, want renewable energy limited to the small-scale, concentrated facilities they can control. "They" being the traditional corporate utility elite trying to maximize fossil fuel assets for shareholders profit-blinded to the real-world consequences: environmental degradation, public health degradation, economic degradation. Rooftop solar is their threat, our hope.

## Advice No. 16-13

1 message

---

**Leland Sanders** <lelandhsanders@yahoo.com>  
Reply-To: Leland Sanders <lelandhsanders@yahoo.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:27 PM

Dear PSC:

I strongly oppose Advice No. 16-13 and support any action that promotes competition regarding any renewable energy, not only in Utah but anywhere. It appears to me that Rocky Mountain Power's proposal is an attempt to obtain and maintain a monopoly in this arena.

Sincerely,

Leland H. Sanders  
Ivins, Utah

## Docket # 16-035-T14

1 message

**Josh Boaz** <jboaz@solcius.com>

Tue, Nov 22, 2016 at 4:28 PM

To: PSC@utah.gov

To Whom It May Concern:

I'm writing in regards to Rocky Mountain Power's deadline of December 9th 2016 for NEM applications to be submitted under the existing plan. These proposed changes and charges to future solar customers have caused uncertainty that's been placed in the public mind. This uncertainty will make it challenging for anyone to go solar after the December 9th without knowing what rate plan they will be on. As a highly involved solar sales representative, I've noticed solar applications drop significantly in Utah, just like they did in Nevada after a similar deadline was set. For the solar market to continue to exist and to allow people to continue to work in the industry after the December 9th, it's crucial that the Utah Public Service Commission remove the December 9th NEM changes. The public needs to know they are protected under current NEM laws until the time the final decision is made.

As I've already previously stated, my company has noticed solar NEM applications decrease as a result of the uncertainty placed in the market by Rocky Mountain Power. We expect that after December 9th NEM applications will come to a stop without knowing what the result of this proposal. The deadline has already caused a decrease in permitting applications to our local offices and solar markets throughout Salt Lake County, Utah County, Ogden, and Southern Utah counties as well. The result has been a loss of revenue to our local cities. We agree that careful deliberation should occur regarding this landmark proposal by Rocky Mountain Power. Homeowners need to know what plan they will be on.

Utah's growth to the solar industry has been tremendous. The December 9th decision will stop the progress to make clean energy in Utah possible and negatively affect the local economy.

Below, I've listed some very important key points to the impact the NEM decision on December 9th will have on Utah's economy and financial state:

As of 2015:

- There were more than 92 solar companies at work throughout the value chain in Utah, employing 2,679 people. **This boosts the State's economy and tax revenue.**
- In 2015, Utah installed 231 MW of solar electric capacity, ranking it eighth nationally. Installed solar capacity in Utah has grown by 1538% over the last year.
- In 2015, \$389 million was invested on solar installations in Utah. This represents a 168% increase over the previous year, and is expected to grow again this year. **Again this brings tax revenue to the State.**
- The 391 MW of solar energy currently installed in Utah ranks the state 14th in the country in installed solar capacity. There is enough solar energy installed in the state to power 67,000 homes. **This dramatically eases generation needs of Rocky Mountain Power and eases the burden placed upon the grid, a much needed benefit for our State's fast growing population.**
- Over the next five years, Utah is expected to install 2684 MW of solar electric capacity, ranking the state sixth over that time span. This amount is more than 11 times the amount of solar installed over the last five years and will multiply the benefits listed above.

The December 9th deadline will cause such a significant impact upon the Utah job market, state revenues and fair competition, a simple e-mail notification for concerned citizens is not the right format. **A public hearing needs to be scheduled prior to December 9, 2016 to provide an open and fair format to comment.**

A precedent to protect the current NEM laws as deliberation takes place has been set in both Nevada and California when the Investor Owned Utilities also made similar requests to the PUC. Utah must follow this example and continue to

allow for people to go to work until the final decision is made.

Here's a quote from the State of Nevada's decision to consider its NEM changes:

"The Nevada Public Utilities Commission has voted to extended the state's existing solar net metering policy through the end of year, as the commission debates the future of the program."

The Utah Public Service Commission needs to follow this example.

"We are grateful that the commission's decision will allow Nevadans to return to their jobs today, while the commission determines long-term rules for solar net metering," said Bryan Miller, co-chairman of TASC.

I urgently ask you to reconsider the NEM changes and additional charges proposed by Rocky Mountain Power . Do not pass them, especially not without a public forum and an opportunity for Utah's citizens to voice their concerns and opinions about the topic. Thank you for listening to your Utah citizens and respecting their constitutional right to freedom of speech.

## RMP Solar Energy Rate Change

1 message

---

**GMail** <kamurr@gmail.com>

Tue, Nov 22, 2016 at 4:28 PM

To: psc@utah.gov

On 11/9/16, Rocky Mountain Power (RMP) filed a rate change for new solar customers. I am very concerned about this rate change and urge you to deny it. RMP has previously tried to market renewable energy, BlueSky Program, etc. I really thought they were trying to be at the cutting edge of renewable energy and cleaning up our air. But this proposal will kill it! Please do not approve it. Here is why:

The Proposal:

- Would be **bad for business** and will kill thousands of solar jobs in Utah;
- **Unfairly punishes consumers** who are trying to save money by using less power; and
- Would allow Rocky Mountain Power to take advantage of its monopoly by **eliminating consumer choice**, energy independence and a consumer's ability to do what they wish on their roof tops.

The proposal by Rocky Mountain Power is the **most aggressive**, **anti-consumer**, **anti-competitive** and **anti-solar** proposal ever made by a utility in the United States.

If these new fees go into effect, they will:

- Prevent Utah consumers from making the choice to use solar to reduce their reliance on Rocky Mountain Power and improve Utah's air quality
- Eliminate thousands of jobs in Utah
- Devastate the solar industry, which is one of the fastest-growing industries in the state

On average, new rooftop solar customers would pay a steep, unfair price:

- More than \$31 per month in increased electrical bills;
- Nearly \$15,000 of additional costs over the life of the system (with standard escalation); and

- More than double the payback timeline of the system from up to 13 years to nearly 30 years.

Rocky Mountain Power is abusing its power as an electrical monopoly:

- Its proposal would unfairly discriminate against homeowners who choose to reduce their purchases from Rocky Mountain Power;
- It claims that there are cost shifts from residential solar customers to other residential customers, which has never been proven and is contrary to many cost benefit studies that have been conducted across the country; and
- Rocky Mountain Power is only interested in returning profits to its shareholders maintaining its market monopoly and eliminating rooftop solar, which it views as a competitive threat.

Solar provides cost savings and benefits to utilities:

- A solar customer provides onsite consumption and energy generation to neighbors; and
- This eliminates the traditional costs of the utility and contributes to grid stability.

Misguided regulation hurts communities:

- In Nevada, NV Energy, a sister company of Rocky Mountain Power, changed net metering rules
- As a result, in just 12 months:
  - Rooftop solar applications dropped by 99%;
  - Major solar companies closed operations;
  - Thousands of Nevadans lost jobs; and
  - Countless customer lawsuits filed.

**The adverse impacts of Rocky Mountain Power 's proposal cannot be overstated. It will kill consumer choice, economic growth, the solar industry and thousands of Utah jobs.**

Thank you, Kathy Murray and Ron Apfelbaum

PublicService Commission &lt;psc@utah.gov&gt;

## Docket #16-035-T14 Public Comment

1 message

---

**MIKE** <themaniam1@comcast.net>

Tue, Nov 22, 2016 at 4:29 PM

To: psc@utah.gov

Greetings Commissioners,

I am very concerned about what Rocky Mountain Power (RMP) is trying to sneak past the public about solar issues.

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. Please suspend looking at this tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require them to use the **normal rate-making process** for their proposed changes.

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. Why should I care since I already have solar on my home? The reason is that I am selfish, I like to breathe clean air and feel that others should be able to do the same as I have and not be charged by an electric utility for trying to do so. I did my homework before I had solar installed on my home in a state that has the second highest amount of sunny days in a year. There are many articles and studies from other regions that have found rooftop solar to have value to the power system and grid (like lack of brownouts), just do a Google search yourselves like I did and you will find them.

Thank you for considering requiring Rocky Mountain Power to use the normal rate making process and timeline. I appreciate having the right to make public comment and the work that you, the Public Service Commission does in the interest of ratepayers and the Utah public.

Respectfully

Mike Thompson

**Nate Wilson** <nate.wilson@sunrunhome.com>

Tue, Nov 22, 2016 at 4:31 PM

To: PSC@utah.gov

Upping the price on net metering to make prices unaffordable for solar should not be implemented. Business brought to your state by solar technology is an economic boom you do not want to miss out on. Please hear my voice in saying this is a very poor idea, utility companies and surrounding companies will only lose money from this mistake.

Sincerely,

—

**John T. Day** <jtday5@gmail.com>

Tue, Nov 22, 2016 at 4:33 PM

To: psc@utah.gov

Dear Commissioner s,

We have already installed solar panels on our cabin and find that it is very helpful. We are however dismayed at the actions of Rocky Mountain to change the basic structure for those of us who install solar panels with our own monies. It appears devious that Rky Mtn would place the issue before the PSC with so little time for comment and study by others in the community. We would urge the PSC to not accept the rate proposal at this time but if the proposal has merit it should be tabled and studied thoroughly by all parties when there is sufficient time for thoughtful research and study.

Thank you,

John Day

**Gary Stone** <gary.stonea@gmail.com>

Tue, Nov 22, 2016 at 4:35 PM

To: psc@utah.gov

Cc: constituentservices@utah.gov, Gary Stone &lt;gary@stonea.com&gt;

Dear Commissioners

,I am writing directly to affirm my opposition to Pacific Corp-RMP's Advice No. 16-13, as filed Nov 9, 2016, changing the rate structure for rooftop solar customers.

In particular I urge the Public Service Commission to Suspend the Tariff, and not let it take effect on Dec 9th. as Rocky Mountain Power has proposed.

I thank you commissioners for accepting public input although the deadline should be extended as it was much to short a time period to even become aware of, let along to give my input, especially as the Thanksgiving Week caused undo additional time constraints for almost everyone interested.

May I respectfully request the PSC, in the interest of the taxpayers, the Utah Public and the many prospective persons who want and need this Solar source of power, that you reject PacificCorp-RMP'S current rate change request.

I personally can see great value to rooftop solar applications, and the grid, as has been realized by other regions and locals.

Obviously RMP has a long time vested interest and motivation to undercut any and all attempts by anyone to provide a better and new method for power, which would cut into their marketing plan and profits !!

Respectfully,

**Roland Shannon** <rolandshannon1234@gmail.com>

Tue, Nov 22, 2016 at 4:37 PM

To: psc@utah.gov

Dear Commissioners,

Hello Folks,

I'm a Pleasant Grove UT resident for the last 15 years. I appreciate the value of residential solar power. A UT resident who is hooked to the grid through RMP is already paying for the delivery service and transmission line maintenance cost so this entire move by RMP is curious. I would venture they probably do have some increased power management cost for solar power users who want to dump their extra power back on the grid but I'm not sure this monthly rate hike for Solar customers is the right way to go. UT gets a significant economic benefit from all of the various solar retailers and installers. It seems to me that a one time fee connection at the time of installation would be far more desirable than an ongoing monthly fee passed on for perpetuity. If that one time cost caused an extra year or 2 for the solar deployment payback then so be it.

I trust you'll do what is best.

re: **Docket No. 16-035-T14 RMP's Proposed Tariff Increase for New Solar Customers**

Dear Commissioners,

For the reasons stated below, I request that you summarily deny Rocky Mountain Power's (RMP's) November 9, 2016 Advice Letter, No. 16-13, *Revisions to Schedule 135 and Proposal for New Schedule 135A*.

RMP proposes that residential customers who apply for net metering after December 9, 2016 be subject immediately to an onerous rate hike under Schedule 135A and it pronounces that existing net metering customer would be grandfathered into the existing rate structure under Schedule 135. In addition, Advice Letter No 16-3 recognizes the ongoing net metering proceeding pursuant to Utah Code Ann § 54-15-015.1, Docket No. 14-035-114 *In the Matter of the Investigation of the Costs and Benefits of PacificCorp's Net Metering Program*. By explicitly recognizing the Commission's investigation into overall costs and benefits of net metering, and reserving changes from that proceeding to this tariff increase, even RMP acknowledges that the record is not complete for the Commission to make a decision on revisions to Schedule 135 and approving a new Schedule 135A.

The haste with which RMP requests the Commission to act will not enable the Commission to make a reasoned, non-biased decision in Docket No.14-035-114 as to what changes, if any, should be made to the net metering program and whether there is a need to grandfather existing customers into the current rate structure. Should the Commission, nonetheless, decide in favor of RMP's New Schedule 135A request, it would be prejudicial to the evidentiary hearing set for the middle of next year under Docket No.14-035-114 because the Commission would subjectively and arbitrarily pre-judging the crux of the issues in that proceeding.

In sum, RMP's request is premature. Any changes now to the current new metering structure are speculative and dependent on the outcome of the future proceeding under Docket No. 14-035-114. Accordingly, the Commission should dismiss RMP's Advice Letter No. 60-13.

Sincerely,  
Denise Chancellor

I URGE the Public Service Commission to suspend the tariff and not let it take effect December 9th, and require it to use the normal rate-making process for its proposed changes.

Rocky Mountain Power is trying to dramatically increase the cost of electricity for Utahns who want to power their homes with solar energy. This would destroy thousands of jobs, consumer energy choice, major benefits to our environment, economic growth and cost benefits to solar consumers in the state. The proposal is the most aggressive, anti-consumer and anti-solar proposal EVER MADE by a utility in the United States. This is what they did in Nevada--read up on it--it killed residential solar in that state. This is a move by the power company monopoly to DICTATE OUR CHOICES in energy.

Please do not go through with this.

Thank you,

Lucy Knorr

**Dear Commissioners,**

**I am opposed to PacifiCorp-RMPs "Advice No. 16-13" filed Nov. 90, 2016 that would change the rate structure for rooftop solar customers. Please consider suspending the tariff and demand more time for input on this potentially damaging proposal.**

**It seems to benefit only RMP and disregards the faith of those who have installed, or plan to install, roof top solar collectors. Our expenditures were high to invest in this type of solar application with an idea of becoming more energy independent. This proposal flies in the face of good common sense in order to line someone's pockets.**

**Thank you for accepting my input--but urge the deadline be extended for input because of the very inconvenient time allotted for this discussion.**

**Bryan Sylvester** <bsylvester@solcius.com>

Tue, Nov 22, 2016 at 4:40 PM

To: psc@utah.gov

To Whom It May Concern:

With regards to Rocky Mountain Power's deadline of December 9, 2016 for NEM applications to be submitted under the existing plan, doubt and uncertainty have been placed in the public mind. This uncertainty will make it challenging for anyone to go solar after the December 9<sup>th</sup> without knowing what rate plan they will be on. As evidence, solar applications dropped significantly in Nevada after a similar deadline was set. For the solar market to continue to exist and to allow people to continue to work in the industry after the December 9<sup>th</sup>, the Utah Public Service Commission will need to remove the December 9<sup>th</sup> date. The public needs to know they are protected under current NEM laws until the time the final decision is made.

We have already seen solar NEM applications decrease as a result of the uncertainty that has been placed in the market by Rocky Mountain Power. We expect that after the December 9<sup>th</sup> NEM applications will cease without knowing what the result of this proposal. The uncertainty surrounding December 10<sup>th</sup> has already caused a decrease in permitting applications to our local jurisdictions. The result has been a loss of revenue to our local cities. We agree that careful deliberation should occur regarding this landmark proposal by Rocky Mountain Power. Homeowners need to know what plan they will be on.

Utah has experienced tremendous growth to the solar industry. The cause of the December 9<sup>th</sup> decision will stop the progress that has been made for clean energy in Utah and the local economy.

This is particularly troubling for me, and my family, as I work in the industry. My job will come to an end right before Christmas if the dates are not set back until the actual policies are decided upon. I think its obvious why this is a problem for us.

Please make sure that the date of December 9th is pushed back until the actual rates and policies for new Net Metering are decided upon.

Thank you,

**Bryan Sylvester**  
Solar Energy Consultant

To: "psc@utah.gov" <psc@utah.gov>

Dear Commissioners,

PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, would change the rate structure for rooftop solar customers. I strongly urge the PSC to suspend the tariff and not let it take effect December 9<sup>th</sup> as Rocky Mountain Power has unfairly proposed. Please utilize the normal rate-making process for your proposed changes.

This restricts free trade and doesn't take into account the positive facts of solar. Please reject this terrible proposal for Utah. If this passes, I would certainly lose my job in the solar industry

Thank you for accepting public input, although the deadline should be extended. Please, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

**Ron Stringham** <rstringham@gmail.com>

Tue, Nov 22, 2016 at 4:44 PM

To: psc@utah.gov

Dear Commissioners,

I am writing to express my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers.

First of all, the deadline for public comments for Docket #16-035-T14 should be extended for a matter of such significance to ratepayers.

Further, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process for its proposed changes.

Consumers depend on the Public Service Commission to represent their interests, and protect them from the monopoly power of utilities. Nowhere is this more important than in the case of solar, where, in good faith, consumers make capital expenditure decisions, with a reasonable expectation that regulations will remain stable and favorable to their investment. Utah should learn from the regulatory debacle that occurred Nevada – not follow suit.

Thank you for considering my input. In conclusion, I respectfully request that the Public Service Commission, in the interests of Utah ratepayers, reject Rocky Mountain Power's current rate change request.

Regards,

Ronald Stringham

**Angel Collinson** <angelcollinson@gmail.com>

Tue, Nov 22, 2016 at 4:46 PM

To: Psc@utah.gov

Dear Public Service Commission,

I am writing to urge you to reject the new fees that Rocky Mountain Power is proposing for net-metering solar customers. Utah is a great location to take advantage of solar energy, and these fees will hurt local families and business by forcing them to pay more for the ability to use the free energy of the sun. These fees would kill any chance of rooftop solar's continued growth in Utah and would put many rooftop solar companies operating in Utah out of business.

I feel strongly that in order to improve the air quality in Utah that so many of us suffer negative health consequences from, we need to be supporting solar energy and not the extremely polluting fossil fuels.

Thank you,

Angel Collinson

**Jolley, Bryce** <bjolley@cedgreentechut.com>

Tue, Nov 22, 2016 at 4:47 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

To whom it may concern at the Utah Public Service Commission,

I am a current Rocky Mountain Power customer, I have been working in the solar industry for 5 years now, and have dedicated myself to Utah's solar industry. I am recently married 4 years ago and will soon be starting a family with children. I have lived in Utah since I was 9 years old. I love this state and want to be able to raise my family here. I know of thousands that will be moving out of state or at least out of a job soon if this is allowed to pass. I am one of them.

I would like to express my concerns of the new tariff RMP has proposed and why it is harmful to Utah. We need to deny this request from RMP as it will put an end to all solar installs going forward. You can see the history of this as NV energy passed a similar rate through Nevada's PUC last year. This can impact a few major areas in my mind. First, the biggest benefit to living in Utah is the Business and economic freedoms we enjoy that spurs job growth and wage growth locally. This tariff would put an end to 100+ local companies and countless jobs that go along with it. Second, it would end a growing industry that is making our air cleaner. Our inversion problem can be greatly reduced as more and more customers have the freedom to go solar. Lastly and most importantly to me, it takes away Utah's consumer freedom of choice. If this is passed through the PSC or if you even allow the December 9<sup>th</sup> start date to occur we are effectively protecting a monopoly that RMP has on our energy options. We are saying consumers do not have freedom to choose their power source and freedom to own it. I understand RMP has painted a rosy picture for the tariff, but you can see the true damages with the NV energy and Nevada PUC for the last year.

Please also review the recent nationwide studies showing both sides of the argument. It show a majority of the Utility companies in the US actually benefited financially from having roof top solar installations. We need to have a 3<sup>rd</sup> party and independent study done to prove how roof top solar effects the whole state and other homes on the grid. We cannot base our decision on RMP's personal studies. See the studies here...

Tue, Nov 22, 2016 at 4:48 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Commissioners:

I am opposed to PacificCorp-RMP's "Advice No 16-13:.", filed November 9, 2016 that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

I am retired and choose a solar system so that I could lessen the cost of power of the next 20 years. I am an advocate of clean energy. I feel that solar customers are being punished for their actions in helping keep our environment more clean. I feel that this proposal punishes free enterprise and will create a hardship for the businesses that provide this service as well as their customers. I feel that it would be appropriate to find a third party to evaluate a fair cost for the utilization of the power grid, for maintenance of the power equipment and for all costs that are relevant to a solar customer when their power leaves their homes. Please do not make such an important discussion without looking at who it helps and who it hurts.

Thank you for accepting this public input and I hope you will extend the deadline on this critical issue.

To: psc@utah.gov

Dear Commissioners,

My husband, my friends, my family, and I are in strong opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. We urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed.

We are a country of advancement and opportunity; RMP is proposing corruption and a stagnant future. I'm proud to be a Utahn with a booming solar industry; we all want solar!!! I believe solar is THE energy of the future. It is abundant, easily available, international, free, and provides many, many jobs. Perhaps most importantly, we need to respect and protect our environment. We only have one planet so let's take care of it; this is it! Solar is an answer that's in our hands; RMP's vision is very narrow!

Thank you for accepting public input, though the deadline should be extended to reach more citizens as I know many are opposed to RMP's plan who want solar in their homes but are not aware of the proposal.

Please kindly consider rejecting PacifiCorp-RMP's current rate change request. They need to make money just as everyone else does, but they should be doing so in a PRO-SOLAR way, for so many reasons, and not against solar.

Thank you for your time. Sincerely,

--

## Docket #16-035-T14 Public Comment

1 message

Shayla Shipley &lt;shay\_sworth@hotmail.com&gt;

Tue, Nov 22, 2016 at 4:48 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Commissioners,

I am adamantly opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes. It seems unprofessional and unethical that Rocky Mountain Power has left the least amount of time for public comment or for anyone but RMP to be able to provide research or analysis for consideration. I also don't like that they have chosen the week of

the Thanksgiving holiday for the deadline for public comment to discourage participation. This deadline is unreasonable and should be extended.

I feel that Rocky Mountain Power should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. This change will personally impact me because not only do I have solar on my roof, but my husband is the founder of Intermountain Wind and SolarHe's grown this business for the last 8 years and it's shame to allow a monopoly to come in and bulldoze all of our hard work and aspirations. Rooftop solar adds value to the power system and grid. This rate increase would impose a 3-tiered rate system on solar customers only that would double or triple the payback period for a solar investment. This rate increase is the most **anti-solar** and **anti-business** rate proposal to date across the nation. If accepted, it very well could destroy the solar industry overnight. This would result in us no longer having a livelihood. Destroying the solar industry seems like a disregard for the quality of our air and other environmental concerns. I feel that this is also a loss of a freedom to choose how I power my home. I'm astounded by this proposal and view it as a drastic overreach by a government regulated monopoly.

Rocky Mountain Power's rate increases will effectively eliminate future investments in rooftop solar and significantly harm Utah's rapidly growing solar industry and eliminate consumer choice in energy production.

I would like to sincerely thank you for accepting public input. I do hope you will extend the deadline for public comment. I respectfully request the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Thank you,

Shayla Shipley

Reply-To: Cecil Shern &lt;cecilshern@yahoo.com&gt;

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require it to use the normal rate-making process for its proposed changes.

RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. This is an extreme overreach by a government controlled monopoly. This personally impacts me as I have made a considerable investment in solar energy and I wasn't anticipating increased costs for the use of the grid and feel that merely the benefits to the grid of my solar panels should pay for my use of the grid. I have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid. Also, other people should be able to make the same choice I have with the same terms. This should be an expanding technology not a contracting one.

Thank-you for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Sincerely,

## Docket #16-035-T14 Public Comment

1 message

---

**Diane Bridge** <bridgedc215@gmail.com>

Tue, Nov 22, 2016 at 4:51 PM

To: psc@utah.gov

Dear Commissioners,

We are opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, we urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and to require them to use the normal rate-making process for its proposed changes.

We feel strongly that RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean and efficient energy. We just installed a solar system last spring for several reasons. One reason was that we could do so without a sizable increase in our energy costs which is particularly critical for us at this time as we are both retired and living on a fixed income. From announcements we have heard, we understand there may be a grandfather clause, but we are concerned for others in our situation as well as the possibility that the clause would have a time limit.

We really loved that it gave us the freedom to choose how we power our home. We feel that this proposal would have devastating repercussions on solar customers financial situations but on the solar business as well. This proposal would extremely limit the ability of others to have the freedom to choose. Before we made the decision to purchase solar panels we did some critical research which included articles from other areas that found that rooftop solar added value to the power system and grid.

Of course one of the critical reasons we elected to go solar was the impact it would have on the quality of our air which is a huge concern here in Utah. We are deeply troubled about the health of many children and adults, including ourselves, which has been adversely affected with the poor air quality that we currently experience.

We thank you for accepting public input and would ask that the deadline for public input be extended so that others may have a chance to respond. We respectfully request that the PSC, in the interests of ratepayers and the Utah public, reject PacifiCorp-RMP's current rate change request.

Sincerely yours,

Edward and Diane Bridge

**Andy Satchwell** <andysatchwell@ymail.com>  
Reply-To: Andy Satchwell <andysatchwell@ymail.com>  
To: "psc@utah.gov" <psc@utah.gov>

Tue, Nov 22, 2016 at 4:51 PM

Dear Commissioners,

I am opposed to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I would like you to suspend the tariff they are proposing and not let it take affect Dec 9th. I would ask that you use the normal rate review process that you normally use.

I dislike the fact that Rocky Mountains study is one sided and only shows the costs to them for solar but none of the pros. They are infact installing their own solar systems to generate power. I work for a solar company and am investing my career in alternative energy's such as solar. I am also in the process of installing my own solar panels on my home. I like that I can do my part to help our community and also be self sufficient. I understand that there are costs associated with maintaining the grid and feel that everybody should help with that. But I think rocky mountain sees solar as a way to disrupt their business model and they don't want their market share to go down. I don't think it is fair that a monopoly like Rocky Mountain should be allowed to submit their own bias study that doesn't show the pros of solar and how it is helping them. Solar generates power at peak demand times that allows rocky mountain to produce less. To my knowledge no other residential rate includes a demand fee like a commercial business. Other studies in other areas of the country show that solar is beneficial to the grid as well as the environmental affects. In Utah we have bad inversion and hurting the industry wouldn't help making Utah a cleaner place.

I think the market should be free and any player who wants to generate power and sell it can. We as solar clients are also making a large investment to generate power and we are responsible for maintaining them. The solar industry in Utah is also booming and by allowing this to go through would destroy many jobs including my own.

Thank you for accepting public input, though the deadline should be extended. In the interests of ratepayers and the Utah public, and myself please reject PacifiCorp-RMP's current rate change request.

Thanks you

Tue, Nov 22, 2016 at 4:52 PM

To: psc@utah.gov

Dear Commissioners,

I wish to express my opposition to PacifiCorp-RMP's "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. In particular, I urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power has proposed and require them to use the normal rate-making process for its proposed changes.

I feel RMP should not be allowed to unreasonably raise the costs for new rooftop solar customers, restrict free trade, and limit access to clean & efficient energy. I have read articles and studies from other regions where they have found rooftop solar to have value to the power system and grid. Solar power generated allows power to be delivered to local neighborhoods on summer day when demand is greatest. If they increase rates for solar then I will propose solar customers all shut down their solar power on a hot summer day and see if that loss of local power will cause a brown out. I believe RMP is saving on upgrading power distribution because rooftop solar power is contributing more than they admit to disburse power generating when and where it is needed when it is needed most.

Thank you Commissioners for accepting public input, though the deadline should be extended. I respectfully request the PSC, in the interests of ratepayers and the Utah public, to reject PacifiCorp-RMP's current rate change request.

Dear Commissioners,

My name is Ethan Garber. I am writing to you today to oppose PacifiCorp-RMPs Advice No. 16-13, which was filed on November 9 2016. This needs to be postponed or denied in full. This is not something a public company should be able to do. This would not only limit the public's freedom of choice when it comes to alternative energy but it would also lead to the destruction of many local companies and jobs. This will put many people in a hard situation. People need to feed their families and the selfishness of one company could prevent people from doing that. That seems a little counter productive considering we as a nation are trying to create jobs and preserve the environment. I think Utah needs to be noticed for its steps in becoming more environmentally friendly. By making Solar energy more expensive it would take this honor away from the state. Many states around the U.S. have found value in having rooftop solar Not only for consumers but also for the power grids in the respective areas. I believe that this is a selfish, greedy and unnecessary move by a monopoly company such as Rocky Mountain Power and its sister companies. I plead with you to oppose this act. Not only because i love my job as a manager at a solar company and need to feed my family; but because the world needs change and alternative energy is large contributor to that. Utah is a great state. Please help it stay that way! Thank you for your time and consideration during this process.

-Ethan Garber

According to a paper published in a respected scientific paper less than two weeks ago, global temperatures are on track to rise as much as 13 degrees within a lifetime. This is worse than previously thought because it now appears that as climates warm, they become more sensitive to the effects of CO2, creating a feedback loop of sorts that accelerates warming.

[www.independent.co.uk/a7407881.html](http://www.independent.co.uk/a7407881.html)

A temperature rise of this magnitude would literally be apocalyptic. It would likely decimate humanity and countless other species. Measurable, irreparable damage is already being done to our planet. This is all thanks to our obsession with consumption and short-term monetary gain at the expense of everything else. This obsession is destroying us along with everything worth protecting on this planet, and if short-sighted, self-centered profiteers like Rocky Mountain Power (RMP) get their way, this is exactly what it will do. We therefore have a solemn duty to stop such destructive efforts as RMP's latest proposal, which would wreak havoc on Utah's solar industry and move our state in the wrong direction. We must do everything in our power to promote clean energy even when it requires sacrifice. Without a healthy, habitable planet, nothing else matters. If RMP can innovate and improve itself in a way that promotes clean energy and helps its customers and our planet, it can continue to exist. If it can't, we have no choice but to phase it out of our society and replace it with something that will serve the common good.

As a resident of Utah and Planet Earth, I urge you to do whatever is necessary to stop RMP's proposal. There is no cost/benefit analysis to be done here; this is a no-brainer. And it's a historic, high-profile case – legislators, regulatory bodies, utilities, companies, and individuals around the nation will see how you act. Please lead by example and set a good precedent. Please, for all of our sakes, do the right thing!
