## Docket #16-035 T14 Public Comment

1 message

---

**Jen Taylor** <eurojenny@gmail.com>

Wed, Nov 23, 2016 at 5:03 PM

To: psc@utah.gov

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. I put solar panels on my house this summer because I believe in this.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Jen Taylor

To: psc@utah.gov

*Dear Commissioners,*

*I oppose the proposal recently filed by Rocky Mountain Power, "Advice No. 16-13", that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9, 2016, as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.*

*I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar , in large part because of the benefits that non-solar customers also receive. I am deeply concerned about the future of our planet, and solar gives people access to a cleaner , more reliable source of energy. Additionally, Utah's air quality needs to improve, and rooftop solar is an important part of that improvement. I believe that RMP is trying to undermine the positives rooftop solar can do in Utah because it threatens their business model. We shouldn't put profits above people and our environment.*

*Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.*

*Sincerely,*

*Mindy Tueller, mindy.tueller@gmail.com, Salt Lake City*

To: psc &lt;psc@utah.gov&gt;

Dear Commissioners, IT IS outrageous and unreasonable that the window to learn of and comment on this unjust and unreasonable closing of opportunity to even comment on the proposed closing of the previous options for implementing effective homeowner participation in solar electrical production. There should be and should have been a much longer and much more open and publicized comment and public information period. People should have E much more time and much more information to allow them opportunity to understand and consider options. Not all homeowners immediately have the fiscal resources to jump into contracting such a significant investment. The opportunity to participate in programs to reduce global warming, to reduce dependence on foreign energy sources, and to be resilient following potential natural or terrorist disruptions should be encouraged and promoted. The opportunity for interested homeowners to participate in producing or capturing electricity should be encouraged, expanded, and promoted. They previously existing program encouraging solar electrical production and Integration of home solar electricity into the larger regional grid should be restored and encouraged more strongly.

We need more renewable, sustainable, solaenergy and need to increase in its use rapidly and for the long term.

**Austin Teasdale** <bigriverteasdale@gmail.com>

Wed, Nov 23, 2016 at 5:17 PM

To: psc@utah.gov

Hi,  
I'm writing this email today to voice my concern about the proposals Rocky Mountain power wants make to make to the rate structure of residential roof top solar consumers/producers. I have worked in the solar industry for the past few years and have see first hand the ways power companies push and attempt to mislead home owners about policies they want in place to assure that solar does not cut significantly into their profits.

I was recently in Florida during the election, to hire and train a new operation technician. Hiring someone was completely dependent on how the vote on amendment 1 turned out. Amendment 1 was a horrible peace of legislation that was worded in a terribly misleading way. Taking to some of the locals the lucky saw through this.

My point is that folks are not as willing to swallow the BS lines put out by power companies, they know the game is constantly being manipulated against there interests, they know power companies are not as green friendly and "solar friendly" as they put them selves out to be.

The interests of the power company (profit) are often in direct conflict with the interests of the community . People want a sustainable future while not going broke paying for the energy that powers their lives. Power companies on the other hand do not... well they are businesses, there main objective is profit. Not that they can't work to make things better , but there is a bottom line they follow.

Please do not ruin my industry , please do not ruin power options for home owners, please do not ruin a path way for cleaner energy. I know there are more influential voices on the other side telling it's necessary, it is not Rocky Mountain power will survive. They will just have to be more competitive with power rates.

Thank you for taking the time to read this.

Austin K. Teasdale  
Solar Operations Technician

To: psc@utah.gov

Dear Commission,

I want to express my opposition to PacifiCorp-Rocky Mountain Power's Advice No. 16-13 which would unfairly change the rate structure for those that wish to promote clean energy though solar energy. Obviously this area sorely needs more of this energy type and efforts to create disincentives through higher costs will not be in the public interest. All efforts to enhance energy savings and better air quality must be encouraged. Please suspend the tariff and prevent RMP's proposal from taking effect on Dec 9th. The environmental benefits of solar and the public interest in promotion of solar should be considered by the commission. Utah can and should be a leader of solar power but can only be accomplished if this rate structure proposal is denied.

thanks for your consideration

Wed, Nov 23, 2016 at 5:37 PM

To the PSC, I would like to second the message being sent by my husband. As responsible citizens, and consumers of electricity we need to look boldly to the future of our planet and do all we can to reduce our carbon footprint. We personally are doing all that we can at our own expense and should not be penalized because RMP needs to continue to do business with an outdated and dirty power source and dying business model. Persons who have made the switch to solar should be encouraged and applauded. Look to the Minnesota study that takes into consideration the positive, more intangible effects of solar power and encourage RMP to do the job they are supposed to do - provide the best, cleanest and most efficient form of power to their customers and not worry so much about lining the pockets of RMP and their stockholders. Solar users help the power company by putting power into the grid at time of high use and help conserve the power grid by sending power over lines to close by user as one example. RMP is a public service company. Embrace the changes we must make to save our small blue planet since it is our only home. I ride my bike all over Summit County and am always so happy when I see new Solar Arrays on homes and barns and on our Public Buildings in Park City because I see that much more of the Sun's energy being used and less carbon filling the air. The same with the increased number of electric cars. Park City and Summit County are working very hard to become carbon neutral and a model for other towns and cities to become cleaner and green. Snow and tourism is incredibly important to the economy of Utah and we are already seeing the effects of smaller snowfall amounts. WE MUST maximize the use of clean renewable energy and RMP should not be allowed to run roughshod on the backs of the consumers who are leading the way on that front. Our solar array even powers our lawn mower. Thank you for your consideration, Pat Lehtonen

Dear Commissioners,

I'd like to voice my strong opposition to the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. Additionally, we need to keep the role of this public sanctioned monopoly in its proper place - that is to service the community at a fair and reasonable return, not line its pockets on our backs.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. We should be making policy choices that advance that, not destroy it.

*Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.*

## Docket #16-035-T14 Public Comment

1 message

---

**John Watson** <john@wonko.net>

Wed, Nov 23, 2016 at 5:47 PM

To: psc@utah.gov

Dear Commissioners,

I purchased my solar system based on some pretty tight calculations. My system just breaks even over the payof f period of about 15 years. If the Rocky Mountain Power proposal were to be imposed on me, this would in effect be an ex post facto tax on my system that would have completely blown the economies of f the scale, making it unfeasible.

While I can understand RMP's concerns, to go back on current arrangements with current solar installations would cause me, and certainly other solar customers, significant hardship.

In addition I feel that the RMP proposal is somewhat hypocritical as they are touting their OWN solar program. Are they going to impose these fees on THOSE customers? Obviously they felt there was a market to be had there, as they have jumped in with both feet.

In short, this appears to be an attempted monopolistic money grab out of fear of lost business. The additional costs of installation are borne by those that install the solar systems, and RMP actually stands to get additional power during peak usage times at extraordinary rates from solar customers. I fail to see how this is costing them any money other than the revenue generated by the solar systems.

In short, I would request you deny any and all proposals that would increase burdens on solar system owners, even at the expense of increasing rates on those who have not invested in these systems.

I appreciate your consideration,

John Watson

**Peter Cartwright** <petercartwright@mac.com>

Wed, Nov 23, 2016 at 5:48 PM

To: psc@utah.gov

Dear Commissioners,

I strongly urgent you to reject PacifiCorp-RMP's proposed Net Metering tariff change (Advice No. 16-13).

Many before me have articulated solid legal, economic and and environmental reasons to reject this proposal. I see no reason to restate those.

I will make only the following comment:

There is no question that the future of energy production in this state, country and planet, will consist of a large portion of renewable energy. The only question is when. If you accept this proposal, you will kill all future residential solar energy in the state of Utah for a long time into the future. I believe that history will show that this delay will be devastating. But history will also show that this change will occur. I strongly believe that we all must encourage RMP to see this future and begin NOW to adjust to their business model to embrace this new energy paradigm.

Thank you for (hopefully) taking these public comments into consideration.

**Raine Raine's Computer** <rugbyraine@gmail.com>

Wed, Nov 23, 2016 at 5:58 PM

To: psc@utah.gov

*Dear Commissioners,*

*As a concerned Utah resident, I am writing in opposition of the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.*

*It think it is not only unfair of Rocky Mountain Power to charge solar customers for electing a more environmentally conscious option, but it is contrary to the energy objectives put forth by the Utah energy department. Governor Herbert stated that, "in the world of energy, we must face new realities, we must confront new challenges, and we must envision and act upon new opportunities." I believe in this statement and as a Utah resident welcome the innovation it seems Governor Herbert is also committed to. The goals he outlines are to "advocate responsible energy resource development, promote policies and practices for improved air quality, and aggressively pursue technology innovations in energy efficiency and development". The three objectives outlined on that page envision a state that embraces solar energy and encourages residents to better their environment by investing in cleaner energy and pioneering the way to a more sustainable way of life. This proposal from Rocky Mountain Power penalizes residents willing to invest in solar energy and a cleaner way of life. It opposes the vision outlined by Governor Herbert and instead of acting upon new opportunities, forces Utah residents be completely reliant upon unsustainable and environmentally costly energy sources.*

*I urge you to keep our interests in mind as you deliberate on this issue and reject Rocky Mountain Power 's proposal to put on tariff on solar users in Utah. Thank you for your time and for considering public comments on this issue!*

*Sincerely,*

*Lorraine To'o*

Provo resident

To: psc@utah.gov

Dear Commissioners,

Please use common sense about energy sources. Fossil fuels are going the way of, well, the dinosaurs. In a region that is plagued with poor air quality that is unhealthy for people, any policy or fee that deters people from solar energy, like the recent proposal from Rocky Mountain Power, "Advice No. 16-13", is completely asinine.

I urge you to think with your brains, not your wallets. Think of the air your children or grandchildren are breathing.

Sincerely,

TO: Public Service Commission <psc@utah.gov>

SUBJECT: Docket #16-035-T14 Public Comment

Dear Commissioners,

I am strongly opposed to PacifiCorp-RMP's Advice No. 16-13, filed Nov. 9, 2016, to penalize solar customers for following their government's suggestions to reduce dependence on fossil fuels. As the watchdog over Public Utilities and the only protection the public has against powerful monopolies, which is the very reason for the existence of the PSC, you should unequivocally deny this fast track request and the shortened public comment period. This smells fishy to say the least. You seem like you are on the side of the utility thereby leaving we customers exposed. For what purpose then do we have a Public Service Commission?

I have read some of the voluminous exhibits and I believe that the real issues are not as stated, the cost of applications, the revamping of the grid, the theft of money by the solar customers from regular customers, etc.. All these are bogus arguments. Automating applications, longer term grid planning (although the impact even in the future is negligible), and who knows where the last theft augment came from. Leaving a vacation home empty for most of a year has essentially the same impact as a solar customer producing some of his own electricity. And it appears that some power is purchased and produced by the utility using wind generation AND solar. So they can

do it but a very small percentage of residential customers can't. Explain the logic in that!

The real issue is NOT global warming or saving the environment. You can sit on either side of that issue. Nor does it have anything to do with a utility's inconvenience or small money issues. Whether or not you believe the reduction of fossil fuels is necessary, is another issue.

The real issue is fairness. Fairness to those of us who have been suckered into investing tens of thousands of dollars (\$43,000 in my case) on hopes and promises made by our government and our utilities.

The government, both state and federal, have encouraged the generation of clean energy and the reduction of fossil fuel energy.

As proof, both the state and federal governments give generous subsidies to encourage the public to invest large sums of money in wind and solar to generate a measly fraction of a percent of the overall capacity of the system. Utilities encourage energy saving devices and diligence in using electricity. They suggest changing out inefficient lighting, also at huge expense. All for the purpose of saving electricity...which is contrary to the purpose of an electric utility...which is to sell lots of electricity.

And why does the government do this? They say it is for the "greater good of the nation". That may or may not be true. But again it is not the issue. They decided on this

course and are encouraging the consumer to go along. They know that it is expensive for the homeowner and that the utility may not like it, but the government continues its relentless drive.

So to have that same government penalize the very people they are trying to incentivize is not only unfair but borders on criminal.

Then to have a designated consumer protection agency even consider changes that are contrary to the stated, advertised, and promoted desires of that same government is the reason we have lost faith in our government...It is unconscionable behavior.

So, instead of fast tracking, limited comment and the appearance of collusion, you as a Public Service Commission should start standing on the side of the consumer, whom you are paid to serve, and automatically reject any proposal, rate increase, etc. that is contrary to your own government's stated objectives. You should give solar customers a Hi Five and give them MORE incentive.

Or, you can do what you are doing now. Just tell us up front that we are suckers and you want us to spend large amounts of money and promise us wonderful returns. Just like they did in Nevada. (And it doesn't look good for the PSC of that state after this last election.) But also tell us that it is a scam and we will be penalized later and will lose our investments and will be hassled because we tried to do what we thought our government wanted us to

do...for the sake of the “greater good”. Yep, that is why we rose up this last election and threw out the bureaucrats with their fat pensions.

I was going to stop here, but just yesterday learned of a tragic statement made in a public interview of Mr. Gary Hooegeveen, Rocky Mountain Power senior vice-president. I could not believe that someone in his position would be allowed to make such a statement.

“Customers partially relying on renewable energy through the net-metering program **must still pay their fair share** of the costs to serve them.”

How deceptive and divisive. Class warfare? Do I live in Russia?

Does a widow living on Social Security and using the very minimum electricity she can afford “not paying her fair share”? A person who turns off his electricity for a year at his vacation house, “not paying his fair share”? Is a customer who installs electricity saving appliances and lights to vastly reduce electricity consumption, “not paying their fair share”?

How does my saving electricity and putting excess electricity on the grid during high demand periods label me as one who is not paying my fair share? How does that impact my neighbors? Are they charged more every time a solar panel goes up. And don't give me the argument that massive amounts of extra equipment is required to

handle solar. Show me the data on that flimsy excuse.

To blast the solar power generating customers as “those who do not pay their fair share” is an absolute insult to those of us who are trying to reduce emissions and secondly it reveals the true nature of RMP, an organization that, having lost the argument on the facts, resorts to creating class warfare as their justification. This is not only crossing the line of common decency but this is a statement right out of a Nazi, Communist or Fascist propaganda handbook.

You should now not only throw this application in the trash, you should demand that Mr. Hoogeveen publicly apologize for his divisive, destructive and misleading statements. I thought we just voted to get rid of people and organizations that encouraged class warfare.

At this point, I should be thanking you for your public service. Well, buck up and do your job and provide the public with some service that we can be proud of. Stop the scam! Or give us our money back!

Your humble, residential, but deceived solar power generator and electricity contributor.

Michael Miller, 833 Ivins, Ut. 84738,  
mikemiller2002@yahoo.com

P.S If you decide to side with RMP on this and start penalizing solar customers, then at best you should

provide a vehicle for all of the solar customers to receive a full refund of their investment from RMP. This will eliminate the massive lawsuits that will be filed against RMP and the PSC as just happened last year in Nevada.

**Matthew S. Garlick** <msg@tbcxinc.com>

Wed, Nov 23, 2016 at 6:37 PM

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

Dear Commissioners,

I am fully opposed to PacifiCorp-RMPs "Advice No. 16-13" which was filed November 2015. This would change the rate structure for rooftop solar customers and I urge you to deny Rocky Mountain Power (RMP)'s request for a fast track. This is too important of an issue to avoid the normal rate-making process for proposed changes.

I am an engineer working for Total Building Commissioning (TBC). Our office is in downtown Salt Lake City. I am very concerned with the air quality in the valley and how this affects our employees and their families health and quality of life. We also have serious issues attracting employees from out of state due to the states reputation for un-sustainable and anti-green environmental practices. By implementing RPM's proposed changes, this will increase the costs for new rooftop solar customers, and infringe on innovation and change that would benefit the entire state, and absolutely here locally in this location of inversion and pollution.

Thank you for accepting public input, although there was certainly little time for it. I am requesting the PSC, in the interest of ratepayers, and all of Utah's public, reject PacifiCorp-RPM's current rate change request.

Best regards,

To: psc@utah.gov

Dear Commissioners,

I am opposed to PacificCorpRMP's Adice No. 16-13 filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I in particular, urge the Public Service Commission to suspend the tariff and not let it take effect December 9th as Rocky Mountain Power and require it to use the normal rate-making process for its proposed changes.

Solar power is clean and efficient, it would likely destory the solar industry here in Utah if the rates are allowed to go through. We getting ready to put solar panels onto our home so that we can become part of the clean fuel population. W e have spoken with people who are benefiting from solar power and are excited to join them. We don't want to have our options limited by RMP and their new rate increase. It is the energy of the future.

I know this is late but I just read the email and wanted to plead with you to extend the rate change process.

Thank you,

Dear Commissioner,

Thank you for reading my email and consideration to my request. Please do not allow Rocky Mountain Power to significantly increase the fees to new Roof top solar customers. I believe that the purposes increase will deter people from adding solar panels to their home. I am a current solar customer and have experienced fist hand it's benefits in our energy costs savings. Most importantly I believe it's our responsibility to take action right now to decease our carbon footprint. The children of Utah deserve clean air and water. The inversion gets worse every year preventing our children, elderly and ill from even being able to leave the house. When will enough be enough... please reconsider this proposal. There is another way. Our elected leaders are smart people... please allow them more time to consider alternatives. Thank you again,

To: psc@utah.gov

Hello,

I would like to express my concern, and opposition, with the PacifiCorp-Rocky Mountain Power's Advice No. 16-13. I believe that Rocky Mountain Power's proposal would unfairly change the rate structure for rooftop solar customers.

I am asking the Commission to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. I would suggest that Rocky Mountain Power use the normal rate-making process.

I don't believe rooftop solar customers should be punished/charged unfairly for doing something that help and saves our environment. We should be rewarding people for using a renewable resource! Not punishing them. If we are ever to get this healthy again, lets start by not taking advantage of people wanting to make a good difference in the world. Please, commissioners, think about the environmental benefits. Think about how we want the earth treated. Think about what you want to leave behind in this world.

Thank you so much for reading this email and listening to the public. I hope and pray that you will reconsider proposal.

**Stephen Glines** <swglines@gmail.com>  
To: psc@utah.gov

Wed, Nov 23, 2016 at 8:35 PM

Dear Commissioners,

Rocky Mountain Power's repeated attempts to stunt rooftop solar with net metering surcharges and their rigged Advice No. 16-13 tariff proposal proves to anyone watching that they cannot be trusted to choose public health and climate stability when it comes at any costs to their short term profits.

The only ones we can count on to make this moral choice is our Utah Public Service Commission. As we all watch our waterways choke with algae, our annual temperatures break new record highs each year, our ice caps and ski industries melt away, and our forests and oceans die, we will also witness our oceans level rise to flood all of the coasts. The heatwaves and flooding will cause millions of climate refugees to rush inland and away from the equators creating conflicts and resource shortages on a global scale.

We have proven technologies for carbon free energy production taking hold now. Our essential conversion to renewable energies has begun in earnest by early adopters and with the help of visionary governmental programs to accelerate the progress. Fossil fuel vested interests like Pacificorp are motivated by and acting on profit greed alone to propose this tariff obstacle designed to slow or stop the conversion to renewables. They prove themselves willing to do this for their own special interest and in spite to the unacceptable risks to the rest of civilization from CO2 dumping and climate destruction.

Everyone else not all motivated by these profit conflicts of interest must help convince the PSC to protect the long range health of the rest of us and all of our descendants by voting this profit at horrible costs rate change proposal down.

Thank you for continuing to accept our input and protecting our public well-being. Please let me know if you will let be of any help in supporting your analysis of this important decision.

Respectfully Yours,

Stephen Glines

Dear Commissioners,

I do not think that Rocky Mountain Power should be allowed to unreasonably raise the rates for new rooftop solar customers and limit access to clean & efficient energy. This change, if the current rates are grandfathered would not impact me personally, however I do not feel it's right to punish, and make financially unfeasable the possibility of others who wish to power their homes with roof top solar panels.

If this rate change takes effect for existing customers, RMP would be breaking an agreement with many customers, including myself, and on which we have planned and invested tens of thousands of dollars.

Thank you for taking public input on this matter I also encourage you to extend the deadline for comment so that others may have a chance to express their views. It is an underhanded of Rocky Mountain power to request this rate change with so little time, and over a holiday when people like myself may not have a chance to fully consider the impact of this rate change. I respectfully request that you reject PacifiCorp-RMP's current rate change request.

Thank you,

Good evening

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016.

I believe that the grassroots rooftop solar is one way that the individual American can help stave off the adverse effects of coal burning and other environmentally unfriendly processes and the proposed tariff would make rooftop solar power insurmountable for most Utahns.

The grid shouldn't be free for rooftop solar customers but it also shouldn't be punishing.

Thank you for taking the time to read this email and consider the public's opinion.

*Dear Commissioners,*

*My thoughts today come from concern for the Utah Solar Rooftop customers, both current and future. I believe Rocky Mountain Power is usurping monopolistic power by trying to raise rates for solar customers who have exercised a capitalistic right that is duly theirs. Instead, I think RMP should try and participate in the renewable energy movement directly by following other utility companies such as Phoenix-based, APS which offers their customers an opportunity to purchase rooftop solar and receive a direct deduction from their bill instead of unfairly imposing a "solar rate" to future rooftop solar customers.*

*I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. **Leslie Jensen** <lesliejensen@gmail.com>

Wed, Nov 23, 2016 at 9:19 PM

To: psc@utah.gov

Dear Commissioners,

I learned this week that Rocky Mountain Power filed a proposal on November 9, 2016, that would unfairly change the rate structure for customers with rooftop solar panels. I oppose Rocky Mountain's proposal, "Advice No. 16-13," and hope that the Public Service Commission will prevent Rocky Mountain Power's proposal from taking effect on December 9, 2016. Rocky Mountain Power should be required to follow normal rate establishing processes and not rush radical changes through for approval here in Utah like they did in Nevada last year. Those changes all but killed rooftop solar system installations in a state where installing solar energy systems on homes certainly makes sense.

I installed solar panels on my roof about eighteen months ago and have enjoyed the savings I have seen in my monthly bills. If Rocky Mountain Power's proposal is approved, and those rates applied to me, my monthly charges would not only exceed what I currently pay monthly, but would significantly exceed the amount I paid even before I had solar panels, making it so expensive to use the solar power that I produce that I would have to return to getting all of my electricity off the grid, disabling the solar system I just installed. What a discouraging loss of what seemed to me to be a win/win investment a year and a half ago.

When I had my solar system installed, I looked forward to saving money over the long haul and believed that I was doing something good for the environment. I live in Sandy, Utah, where winter inversions contribute to terrible air quality. Solar energy is a clean source of energy. We all need to do what we can to improve Utah's air quality, and rooftop solar power should be a part of a multi-faceted solution to the problem. Rocky Mountain Power's proposal would discourage people like me from taking the step toward using this clean power source.

I hope that you will reject Advice No.16-13 and allow individuals like myself to continue to install and use rooftop solar systems, which require a significant initial investment, at affordable rates to help improve Utah's air quality.

Thank you for considering my input on this important issue. Passing Rocky Mountain Power's proposal would make Rocky Mountain Power an even bigger monopoly than it already is and would really cripple if not kill the good clean energy movement that has started in Utah.

Sincerely,

Leslie G. Jensen

Wed, Nov 23, 2016 at 9:29 PM

To: [psc@utah.gov](mailto:psc@utah.gov)

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Cherese Emery

**Ed Casmer** <ed@casmerville.com>

Wed, Nov 23, 2016 at 10:26 PM

To: psc@utah.gov

Dear Commissioners,

I oppose Rocky Mountain Power's proposal regarding solar in Utah, "Advice 16-13", filed on November 9, 2016. I urge the Public Service Commission to reject this proposal from taking effect on December 9. There are a number of reasons this proposal should not be implemented.

I currently have solar on my house and will therefore be grandfathered on the current rate structures, but my concern is that once they can marginalize/trivialize the power the customer is generating and providing to the grid in general, the more easily they can modify the credits and rate tiers for existing solar customers. As soon as this passes and creates precedence, the grandfathered customers will be gone after for "not paying their fair share." The subsidy argument doesn't make complete sense either. All solar customers who do not generate 100% of their power still pay per kWh hour rates. Is the margin inside these rates still not going to poles and system infrastructure?

I can understand that hind sight is 20/20 and adjustments need to be made as programs go along, but normalizing the rates/fees to "make it fair" for everyone else is a contradiction. Why should the "everyone else" get a break on the backs of the private solar customers who have put some investment into the energy generation. Is there some magic break even number of kWh usage that they are normalizing to? In RMP's 1000 kWh example in which half is generated from solar they are indicating 500 kWh payable by the customer isn't enough to support the infrastructure. What of the homes and apartments who only use 500 kWh regularly. Are we to say we should "fine" them as well to make up for the others? We certainly can't say that solar isn't a positive to the infrastructure and the power generated or RMP and others wouldn't be building and leveraging such large solar farms. So the solar itself doesn't appear to be the issue.

I do believe this will be a detriment to the community as it will definitely have an impact on those willing to put up private solar. The argument of saving 52% versus still saving 35% is substantial. The argument that 35% is still a great number to save is still at that tipping point where more often I do not believe people will go through the effort/pain for that number. And this impacts many things: jobs, environment, air quality, personal commitment to being greener.

Again, I have solar already and thankfully will be grandfathered in (for the time being), but something just doesn't feel right with this. The "making up for everyone else not doing solar" just doesn't make sense to me. I have been through RMP's site that discusses all this, but that doesn't resonate as the fact of it either. I may have to break down and read the 400 page doc to see if that gives the details and the data to net this out.

I appreciate being able to participate in this discussion, even if just through an email submission. I'd be happy to talk further if needed.

Thanks,  
Ed Casmer

**Fred Anderson** <fja1220@gmail.com>

Wed, Nov 23, 2016 at 10:43 PM

To: psc@utah.gov

Berkshire-Hathaway pulled this more in Nevada previously I think it is unusual that you use the name Pacific Corporation and Rocky Mountain Power. This Company attempted to get a power line easement through private property in the name of Berkshire-Hathaway Energy.

Warren Buffet is a master of greed. Look at the management of his companies. RC Wiley , no interest if paid in 12 months, payments schedule does not pay of f, so a lump payment is needed. Don't pay in full, interest is recalculated from day 1 @ 21%.

Utah's PSC should reject this application, resist their threats for poor service, etc. and suggest they sell to another entity.

**David Turner** <dturnerndr@gmail.com>

Wed, Nov 23, 2016 at 10:56 PM

To: psc@utah.gov

*Dear Commissioners,*

*I oppose the recent proposal from Rocky Mountain Power , "Advice No. 16-13", filed Nov . 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.*

*I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, a nd I believe rooftop solar should be part of that solution.*

*Note that Rocky Mountain Power already charges rooftop solar customers a monthly connedt fee. In addition they buy excess power at wholesale rates. Hence rooftop solar customers already subsidize power to Rocky Mountain Power customers. The requested increase in rates would have a chilling effect on the implementation of future rooftop solar installations.*

*Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.*

*Sincerely,*

Dear Commissioners,

Please reject the recent proposal from Rocky Mountain Power, "Advice No. 16-13." It is a clear incumbent response to disruptive solar power and is not good for the consumer or the State of Utah. Rocky Mountain Power should be required to use the normal rate-making process.

It don't see how it makes sense for Rocky Mountain Power to raise rates for customers who wish to use solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.

Sincerely,

Kevin Mitchell

*Dear Commissioners,*

*I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.*

*I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution. Consider the potential problems customers may have if they switch to solar like a friend of mine who uses it to pump her well to water her pasture and animals but hasn't installed enough panels for her home yet. Her monthly kWh will be less than before but she could pay astronomically for what she uses in her home because she is a "solar customer". I believe a better situation can be found to address all these problems and encourage progress.*

*Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.*

*Sincerely,*

Jennifer Hirst, Hooper Utah

**Diana Peterson** <diana.j.peterson@gmail.com>

Wed, Nov 23, 2016 at 11:27 PM

To: psc@utah.gov

Dear Commissioners,

I write to express my strong opposition to Rocky Mountain Power's recent proposal "Advice No. 16-13," which was filed November 9, 2016. This proposal would change the rate structure for rooftop solar customers, resulting in a monthly solar fee that is unfair, doesn't make sense, and would deal a death knell to the use of solar power in Utah.

I urge the Public Service Commission to suspend the proposed tariff and to prevent it from taking effect on December 9, as Rocky Mountain Power has proposed. The company should be required to use the normal rate-making process.

Rooftop solar is part of the solution to several serious problems Utahns currently face. We are all deeply concerned about the future of our planet, and have been greatly encouraged by the development of solar power's ability to provide access to a cleaner and more reliable source of energy. As well, seeing solar power come to Utah has given me and many other citizens hope that our state's air quality -- and therefore the health of everyone who lives and works here -- will improve.

Rocky Mountain Power should not be allowed to raise rates to a point that makes rooftop solar uneconomic for customers who wish to use it.

Thank you very much for accepting input from the public on this critical issue. I respectfully request that you give the interests of the Utah public, and of ratepayers in particular, as much weight as those of the utility company. I plead with you to reject Advice No. 16-13.

Sincerely,

Diana Peterson

Reply-To: Temaire Erb &lt;temaire\_erb@yahoo.com&gt;

To: "psc@utah.gov" &lt;psc@utah.gov&gt;

I am in opposition to PacifiCorp Rocky Mountain Power's Advice No. 16-13. I believe Rocky Mountain Power's proposal would unfairly change the rate structure for rooftop solar customers I would ask the Commission to suspend the tariff and prevent Rocky Mountain Power's proposal from taking effect on December 9. I suggest Rocky Mountain Power use the normal rate-making process. I believe Rocky Mountain Power is trying to gain a monopoly on energy. Renewable energy such as wind and solar should be a viable option for citizens of the state of Utah. I am concerned that Rocky Mountain Power is making an attempt to monopolize on a developing industry. I would encourage the commissioners to consider the environmental benefits of solar. Thank you so much for your willingness to listen to the public.

**John Webster** <john@xmission.com>  
Reply-To: John Webster <john@xmission.com>  
To: psc@utah.gov

Wed, Nov 23, 2016 at 11:51 PM

Dear Commissioners,

Interesting story, my father worked for President Carter during his administration by touring the country touting the benefits of solar energy My dad's job ended with Carter's transition out of office, as did the solar panels on the white house that Carter had installed.

Flash forward 36 years. Special interests somehow still feel threatened by the clean energy sector are again doing their best to kill the progress of solar energy

Our children get sick from the bad air and yet Rocky Mountain Power is somehow threatened by people that choose solar energy at the residential level. They seek to kill this fast growing sector with their proposal "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers. **Please do not pass this proposal**

Our family strongly urges the Public Service Commission to **suspend the tariff and prevent it from taking effect on December 9** as Rocky Mountain Power has proposed. Rocky Mountain Power should follow the standard rate-making process and not be granted fast track access by the PSC. This appears highly unusual for the PSC.

We share this planet. We all breathe the air in this valley Clean rooftop residential solar energy improves Utah's air quality and provides benefit to Rocky Mountain Power during peak hours as well as delivering clean power to upstream neighbors.

I respectfully request that you soundly **reject Advice No. 16-13**.

Thank you for accepting input on this critical issue.

Warm regards,

- John Webster

Dear Commissioners,

I STRONGLY oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process as befits everyone else in the community .

It is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . However, this is what America is good at, controlling the population by raising prices on things that benefit the community as a whole so a few power players can keep their lavish lives. And though it has been successful in the past, the people are now raising their voice in unity to stop the control and the I am a citizen that is deeply concerned about the future of our planet, and I believe solar is one of many powerful options that gives people access to a **cleaner , more reliable source of energy** . Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power , and reject Advice No. 16-13.

Sincerely,

Fri, Nov 25, 2016 at 12:58 AM

Reply-To: fbmallory@gmail.com

To: psc@utah.gov

TO: Utah Public Services Commission

SUBJECT: RMP Filing #16-035-T14

Dear Commissioners,

I would like to express my desire that the Public Service Commission **not approve** Rocky Mountain Power's request in the above referenced filing. In support for my request I provide the following information:

1. In response to strong federal and state requests that we reduce air pollution, especially here in Utah, I began considering solar energy for my home earlier this year and made a final decision only a few weeks ago.
2. I must stabilize my costs of living expenses. I've been retired for 15+ years with only slight Social Security annual increases to cover ever-increasing costs of living and utility expenses. On October 31, 2016, after extensive research, reviewing numerous vendor proposals, and talking with solar system sales representatives, I signed a contract for the installation of 6.54kW of solar power for my home in Orem. 6.54kW is more than my current requirements and greater than was specified by any solar company seeking my business. However, I wanted to cover my current maximum electrical requirements and felt that if I returned some surplus electricity to RMP's grid that could support grid requirements and my neighbors, the higher initial up-front costs would be worth it.
3. I learned just last week about Rocky Mountain Power's (RMP) filing for a change in their Net Metering program with its higher costs (and/or the probability of higher rates to residential customers, without PSC approval). Upon learning of this filing I was greatly disappointed and disturbed. Disappointed that RMP was filing a tariff that would negatively impact the solar industry in Utah and slow down or reduce solar installations apparently against requests from Governor Herbert that we reduce dangerous emissions. Disturbed that my costs, which I'm trying to manage as best I can, will be out of my control and negatively impacted – even after a sizeable initial outlay of cash to acquire and install a solar system.
4. I understand that RMP has requested a cut-off of November 22, 2016 for public comments, such as mine. However, after contacting your office I understand my comments would be appreciated, even if received later than November 22. Such a short period for comments seems unreasonable, unless RMP is trying to slip something by the PSC or their solar net metering customers. Why the rush?? If their need is legitimate, is there not an established process that RMP should be following to request changes in their tariffs, policies and rates.
5. It appears to me, from what I have studied and learned about residential solar energy that I will be taking on more responsibility in having electrical energy to support my home and family. My increased workload/involvement should result in reduced work for RMP and its employees. If anything, RMP should be seeking ways to encourage rooftop solar systems instead of discouraging them through tariff changes and higher, complicated rate structures.

I appreciate the opportunity of presenting my thoughts on residential solar energy and how this tariff filing impacts me and my family. I believe solar energy should be on the mind of all home owners and property developers. Rocky Mountain Power should be looking for ways to embrace the generation of residential and business solar energy by owner investment, rather than discouraging its development.

Sincerely,

Ferrell B. Mallory

Rocky Mountain Power should be required to use the normal rate-making process.*

*I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar . I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner , more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.*

*Rocky Mountain Power is a monopoly, and rooftop solar is the only alternative the people in Utah have to escape the ever increasing rates from Rocky Mountain Power . This rate proposal is simply an attempt to maintain the monopoly and to kill thousands of competing jobs. Rocky Mountain Power just got a huge bolster to the monopoly with the step bill that eliminated the 70/30 split, they don't need to kill an entire industry as well. Utah does not want to cater to the profit margins of a crony capitalist at the expense of our economy .*

*This proposal does not conform to the conservative values that Utah holds dear . Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13.*

*Sincerely,*

## RMP Solar Rate Change

1 message

---

**Rachel Engler** <rme\_id@hotmail.com>

Fri, Nov 25, 2016 at 2:41 PM

To: "psc@utah.gov" <psc@utah.gov>

Hello,

I am dismayed to see Rocky Mountain Power attempting to raise solar energy rates again. Please deny Schedule 136 and the related Schedule 5 tariff

We should be looking at ways to encourage self-sustaining power and energy conservation. Utah is a great state for solar energy And Utah has a serious air pollution issue. Please support clean solar energy and the public's right to affordable choices.

Thank you,

Rachel Engler

## Rocky Mountain Power Proposes Rate Changes for Solar Customers

1 message

Jack & Joyce <jshort91@msn.com>  
 To: "psc@utah.gov" <psc@utah.gov>  
 Cc: "Morris, Lance" <lance.morris@hp.com>

Fri, Nov 25, 2016 at 4:08 PM

Dear Commissioners,

I oppose the recent proposal from Rocky Mountain Power "Advice No. 16-13", filed Nov 9, 2016, that would change the rate structure for rooftop solar customers.

I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process.

I believe it is unfair for Rocky Mountain Power to raise rates for customers who wish to use rooftop solar. I am deeply concerned about the future of our planet, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be part of that solution.

We all have a responsibility to do what we can to help clean up our air and reduce global warming. As consumers of power can install rooftop solar on our homes and thus reduce our dependence on fossil fuels and do our part in this effort. Any and all tariffs and or rate hikes that would discourage or prevent home owners from installing rooftop solar is a vote against clean air for not just Utah but all of the world.

Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power and reject Advice No. 16-13.

Thank You,

Jack Short

**Request (Open):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Request (Closed):** Subject: RMP rate increase on solar customers I oppose the recent proposal from Rocky Mountain Power, "Advice No. 16-13", filed Nov. 9, 2016, that would change the rate structure for rooftop solar customers. I urge the Public Service Commission to suspend the tariff and prevent it from taking effect on December 9 as Rocky Mountain Power has proposed. Rocky Mountain Power should be required to use the normal rate-making process. I believe it is unfair for Rocky Mountain Power to raise rates fro customers who wish to use rooftop solar. I am deeply concerned about the future of our plant, and I believe solar gives people access to a cleaner, more reliable source of energy. Utah's air quality needs to improve, and I believe rooftop solar should be a part of that solution. Thank you for accepting public input on this important issue. I respectfully request that you put the interest of ratepayers and the Utah public on equal footing with Rocky Mountain Power, and reject Advice No. 16-13. Sincerely,

Thank you.

**Subject:** Public Service Commission

**Request (Closed):** Subject: The Utah Public Service Commission should not permit Rocky Mountain Power from penalizing clean solar power initiatives ear Governor Herbert and Commissioners, Rocky Mountain Power's repeated attempts to stunt rooftop solar with net metering surcharges under Docket #16-035-T14 and their rigged Advice No. 16-13 tariff proposal, proves to anyone watching that they cannot be trusted to choose public health and climate stability when it comes at any costs to their short term profits. The only ones we can count on to make this moral choice is our Utah Public Service Commission. As we all watch a massive human caused species extinction unfold, our waterways choke with algae, our annual temperatures break new record highs each year, our ice caps and ski industries melt away, and our forests and oceans die, we will also witness our oceans level rise to flood all of the coastlines. The predicted heatwaves and flooding will cause millions of climate refugees to rush inland and away from the equators, creating conflicts and resource shortages on a global scale. We have proven technologies for carbon free energy production taking hold now. Our essential conversion to renewable energies has begun in earnest by early adopters and with the help of visionary governmental programs to accelerate the progress. Fossil fuel vested interests like PacifiCorp are motivated by and act on profit greed alone in proposing this tariff obstacle designed to slow or stop the conversion to renewables. They prove themselves willing to do this for their own special interest and in spite to the unacceptable risks to the rest of civilization from CO2 dumping and climate destruction. Everyone else not all motivated by these profit conflicts of interest must help convince the PSC to protect the long range health of the rest of us and all of our descendants by voting this profit at horrible costs rate change proposal down. Thank you for continuing to accept our input and protecting our public well-being. Please let me know if you will let be of any help in supporting your analysis of this important decision. Respectfully Yours, Stephen Glines, Mormon Environmental Stuardship Alliance Bountiful, Utah

Thank you.

**Request (Open):** Dear Governor Herbert, I am a new resident of Utah, only a couple months, but proud to now call Salt Lake City my home. I moved here for a job in the marketing department of Snowbird. Clean energy and forward thinking is something I'd like to say my state is a part of. Please do not impede the growth of solar power. Rocky Mountain Power is looking for oligarchical action to be taken in order to benefit their business. Solar is a cheaper, smarter, and more advantageous power source in the minds of many, this is capitalism. Please do not stunt the growth of this beneficial upcoming business. -Chris Segal

Thank you.

**Request (Open):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Request (Closed):** Subject: Taxing of the concrete and solar industries Governor Herbert, My name is Andrew Young. I am contacting you in regards to the taxes and regulations I see that are going to be levied against the solar and concrete products and industries. First of all: I don't understand why we would want to tax these industries further than they already are? Second: aren't we supposed to be promoting growth and creating jobs not limiting them and forcing them to close because of these taxes? I call on you and all of the other leaders to take a stand with Utah businesses and block these types of taxes from being levied against them. This is very important to the success of Utah and even reflects on your own office and it's success. I and those with me would appreciate it if you would respond and take action quickly to improve and not tax businesses further. Thank you. Andrew S Young Young Republicans of Southern Utah.

Thank you.

The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Subject:** Public Service Commission

**Request (Open):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to

look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

**Request (Open):** Governor Herbert, Congratulations on your re-election. Utahns like myself are looking to you to represent us and our issues now and in your coming term. As you must be aware by now, Rocky Mountain Power has filed a request before the Public Service Commission to raise rates on rooftop solar systems on November 9th. Although the fees are among the highest proposed by any utility around the nation on rooftop solar customers, Utah's average salary is lower than most states, especially after adjusting for cost of living. Rocky Mountain Power would effectively be making it impossible for many existing and many potential customers to afford rooftop solar. Almost 4000 people in Utah work in solar, and hundreds of millions of dollars flow through the state economy as a result. It is certain that if these fees are put into place, the economic and job benefits of a growth industry in Utah will disappear as it did in Nevada.

Another state will learn from our mistakes and capitalize on the opportunity. Nevada's commission imposed similar fees on owners there: crashing the solar industry. We need to be the state that learns from others' mistakes. As an economic development state, Utah must be mindful of the importance of the solar industry. Your office has championed and seen the rewards of growth. This is why I am calling upon your leadership on this issue. Thank you for your time and I look forward to your feedback.

Thank you.

**Office #:**

**Subject:** Public Service Commission

**Request (Closed):** Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.
