Re: **Docket No. 03-035-14 – Quarterly Compliance Filing – 2019.Q3 Avoided Cost Input Changes**  
**Docket No. 19-035-18 – 2019.Q3 Avoided Cost Input Changes Quarterly Compliance Filing**

PacifiCorp (d/b/a Rocky Mountain Power) respectfully submits its quarterly Schedule 38 compliance filing.

Public Service Commission of Utah (“Commission”) orders dated October 31, 2005, and February 2, 2006, in Docket No. 03-035-14 require the Company to keep a record of any changes, including data inputs, made to the proxy model and the Generation and Regulation Initiative Decision Tool (“GRID”) model used in calculating avoided costs. The orders further require the Company to notify the Commission and Division of Public Utilities (“DPU”) of updates made to the models used in the approved Proxy and Partial Displacement Differential Revenue Requirement (“PDDRR”) avoided cost methodologies. The Commission order dated June 9, 2015 in Docket No. 14-035-140 requires the Company to identify routine and non-routine updates or modeling changes. Non-routine updates will become effective in three weeks if the update is unchallenged by any party or upon resolution by settlement or Commission action if challenged by any party.

No comments were filed challenging the Company’s previous compliance filing, which was submitted to the Commission on September 30, 2019 (“2019.Q2 filing”).

**Routine Updates**

**Appendix A** provides a summary of the assumptions used within the GRID model. The Company identifies the following routine updates to its avoided cost inputs since the previous filing:

1. **Official Forward Price Curve (“OFPC”)**  
Update to prices dated September 30, 2019 (1909 OFPC).

**2. 2019 Integrated Resource Plan (“IRP”)**

Updates to reflect 2019 IRP assumptions, including the preferred portfolio, capacity contribution, regulation reserve requirements (integration cost), and energy storage dispatch. In addition, the generation profiles used for the indicative wind and solar QFs have been modified to be consistent with 2019 IRP assumptions.

**3. Qualifying Facility (“QF”) Queue**

Update of signed contract queue and current potential QFs. The QF queue was revised to include 1,784 MW nameplate in this filing. The potential queue was 2,687 MW nameplate in the 2019.Q2 filing.

**4. Production Tax Credit Update**

House Resolution 1865 was signed by the president and became law on December 20, 2019.<sup>1</sup> As a result of this law, wind resources which begin construction after December 31, 2019 and before January 1, 2021 and which reach commercial operation within four years will qualify for a 60 percent production tax credit. As a result, the 2024 Wyoming wind resource in the 2019 IRP preferred portfolio (with an assumed online date of 12/31/2023) is now expected to qualify for a sixty percent production tax credit, up from the forty percent production tax credit assumed in the 2019 IRP.

**Non-Routine Updates**

**1. Utah Wind Resource Deferral**

The 2019 IRP preferred portfolio includes 69 MW of Utah wind resources in 2023 and 1920 MW of Wyoming wind resources in 2024. The proxy wind QF resource is assumed to have the same generation profile as the Utah wind resource selected in the 2019 IRP. Under the approved PDDRR avoided cost methodology, only cost-effective renewable resources are eligible for deferral. In the 2019 IRP, the 2023 Utah wind resource was identified as a “customer preference” resource, and was one of a portfolio of renewable resources added to meet anticipated customer demand for renewable resources. Meeting this renewable resource requirement results in incremental costs, identified in Sensitivity S-07, indicating the portfolio of incremental renewables is not cost-effective.<sup>2</sup>

When the PDDRR method is applied based on the deferral of Wyoming wind, the avoided cost exceeds the resource cost of Utah wind resources, which were also available to be selected as part of the 2019 IRP. This outcome suggests that the IRP models would have shown a benefit from adding more Utah wind resources, rather than Wyoming wind resources. The fact that it did not, and that the Wyoming wind resource capacity selection was unchanged by the addition of Utah wind resources in the preferred portfolio relative to Sensitivity S-07, indicates that the IRP models may not consider the Utah and Wyoming wind resources interchangeable on a capacity-equivalent basis. For this compliance filing, PacifiCorp is proposing a modification to base the proxy Utah wind QF pricing on deferral

---

<sup>1</sup> Details available online: <https://www.congress.gov/bill/116th-congress/house-bill/1865>.

<sup>2</sup> 2019 IRP: Chapter 8, pages 269-270.

of Utah wind resources with a comparable profile and geographic location with the cost and performance assumptions in the 2019 IRP, rather than on Wyoming wind resources from the preferred portfolio.

PacifiCorp believes that this modification results in a more accurate representation of the avoided cost associated with Utah wind resources than the current methodology based on deferral of Wyoming wind resources. However, PacifiCorp recognizes that additional examination of the interplay between IRP portfolio selection and the PDDRR methodology is warranted. In particular, as part of the reliability assessment performed on each portfolio evaluated in the 2019 IRP, PacifiCorp identified significant differences between portfolios with seemingly equivalent capacity contributions. To that end, PacifiCorp intends to assess the portfolio impacts and avoided costs of potential Utah QFs using the IRP tools and to file the results and conclusions at a future date.

### **Additional Details**

Additional detail is provided below:

1. **PDDRR Avoided Cost Methodology** – The proxy resources used in the PDDRR avoided cost methodology are consistent with the Company’s 2019 IRP filed with the Commission on October 18, 2019. The 2019 IRP preferred portfolio includes cost-effective solar with storage, wind, wind with storage, stand-alone storage and thermal resources. The incremental thermal QF resource partially displaces summer and winter front office transactions (“FOT”) during 2020-2025, and the Naughton simple-cycle combustion turbine in 2026. The incremental tracking solar QF resource partially displaces summer and winter FOTs during 2020-2023 and the Jim Bridger solar with storage resource in 2024. The incremental wind QF resource partially displaces summer and winter FOTs during 2020-2022 and the Utah wind resource in 2023.
2. **Impact to Avoided Cost Prices (\$/MWh)** – Provided as **Appendix B.1** is the \$/MWh impact of the above mentioned updates on avoided costs, compared to the previous compliance filing.
  - a. Avoided costs presented in **Appendix B.1** were calculated assuming a 100 MW 100 percent capacity factor thermal QF resource.
  - b. Avoided costs presented in **Appendix B.2** were calculated assuming an 80 MW 32.3 percent capacity factor single-axis tracking solar QF resource.
  - c. Avoided costs presented in **Appendix B.3** were calculated assuming a 69.2 MW 29.4 percent capacity factor wind QF resource.
3. **Major Changes from the Prior Study** – Provided as **Appendix C** is a \$/MWh step impact study of the routine updates from the prior study. Also provided in **Appendix C** is the incremental impact of each change from the prior step.

**Work Papers**

The Company has also provided calculations with additional details on the following:

- Current QF queue and partial displacement adjusted for solar degradation; and
- FOT partial displacement

## **Appendix A**

**ROCKY MOUNTAIN POWER**

**DESCRIPTION OF AVOIDED COST INPUT CHANGES**

**2019.Q3 – December 2019**

## Appendix A

### PacifiCorp Avoided Cost (Partial Displacement Differential Revenue Requirement (“PDDRR”)) Model Updates through December 2019 Docket 19-035-18 / Docket 03-035-14

---

Assumptions that have changed since the 2019.Q2 compliance filing are in **bold and underline**.

#### GRID Scenario Study Period

- January 1, 2020 through December 31, 2034 - 15-year study.
- Avoided cost prices starting in January 2020.

#### Official Forward Price Curve (“OFPC”) (Gas and Electric Market Prices)

- **Updated to PacifiCorp’s September 30, 2019 OFPC (1909 OFPC)**
- Hourly Market Price Scalars consistent with 2019 Integrated Resource Plan (“IRP”)

#### Fuel Prices (Coal)

- Average and incremental coal costs based on forecast dated August 2019.
- Coal burn expense reflects incremental coal costs and coal take or pay minimum burn levels.

#### IRP Resources

- **2019 IRP** filed with the Public Service Commission of Utah (“UPSC”) on **October 18, 2019**.
- **New solar, wind, battery storage, and thermal resources; as well as front office transactions ("FOT"), consistent with 2019 IRP (2019 IRP, Vol 1, Chapter 8).**
- **Existing plant retirement consistent with 2019 IRP (2019 IRP, Vol 1, Chapter 8).**
- **Transmission investment and capacity changes consistent with 2019 IRP (2019 IRP, Vol 1, Table 8.16).**

#### REC Ownership:

Consistent with the Commission’s January 23, 2018 order in Docket No. 17-035-37, when a QF defers or avoids a renewable resource, the Company retains the renewable energy credits (“RECs”) on behalf of ratepayers. When a QF’s avoided capacity costs are not based on the costs of a renewable resource, the QF is entitled to the RECs associated with its output.

#### Hydro Resources

- Hydro forecast prepared March 2019.
- 2019 hydro levels extended thereafter with known and measurable changes.
- Adjust Klamath dispatch to reflect current operating patterns.

- Update Mid-Columbia (“Mid-C”) generation forecast.

### **Discount Rate**

- **6.92 percent discount rate - 2019 IRP**
- Discount rate is consistent with the Commission’s order in Docket 11-035-T06.

### **Inflation Rates**

- Company’s inflation rate forecast dated **September 2019**.

### **Levelized Prices (Nominal) at 6.92 percent Discount Rate**

- 15 years 2020 through 2034.
- Levelized prices are for illustrative purposes only.

### **Load Forecast (Retail)**

- 20-year load forecast dated June 20, 2019.

### **Long-Term Contracts**

- Long-term contracts which have prices that are indexed to market are consistent with the **1909 OFPC**.
- Contracts are modeled based on 48 months ended December 2018.
- Qualifying Facility (QF) power purchase agreements (PPA) are assumed to terminate and not renew at the end of their current PPA term.
- Incorporates signed PPAs.

### **Market Capacity**

- Capacity set at 48-month average of all short-term firm (“STF”) sales ended December 2018.
- Mid-C and Palo Verde (“PV”) markets uncapped.
- Additional heavy load hour (“HLH”) and light load hour (“LLH”) sales limited to historical 48-month average less monthly executed STF contracts as of **September 2019**

### **Potential Environmental Costs**

- Potential environmental costs are excluded from fuel cost for net power costs (“NPC”) and plant commitment and dispatch decisions.

### **Regulating Margin**

- Requirements are modeled based on the **2019 IRP Flexible Reserve Study**.

- **Regulation reserve requirements are modified to account for the incremental integration costs specific to the QF and preferred portfolio displacement being evaluated, consistent with the methodology used in the 2019 IRP.**

## Contingency Reserve Calculation

- Reserve modeling reflects the North American Electric Reliability Corporation / Western Electricity Coordinating Council reliability standard BAL-002-WECC-2 – contingency reserves set to 3 percent of retail load plus 3 percent of generating resources.
- Hourly retail load reserve calculation through 2022.
- Typical week retail load reserve calculation thereafter.

## STF Transactions

- Executed STF contracts as of September 2019.

## Size of the Avoided Cost Resource

- The avoided cost thermal resource is 100 megawatt (“MW”) with a 100 percent capacity factor and is located in the Utah North transmission bubble.
- The avoided cost tracking solar resource is 80 MW with a 32.3 percent capacity factor and is located in the Utah North transmission bubble.
- The avoided cost wind resource is 69.2 MW with a 29.4 percent capacity factor and is located in the Utah North transmission bubble.

## Thermal Resources

- Thermal resource operating characteristics updated to be consistent with current Company official characteristics.
- Forced outage, planned outage, and heat rate levels based on 48 months ended December 2018.

## Wind and Solar Resources

- Existing wind and solar generation profiles modeled using 2018 actual generation shape.<sup>1</sup>
- Wind and solar generation shaped to hourly using 2018 actual generation shape.<sup>1</sup>
- Non-PTC wind resources that are located in a constrained area and can be curtailed on an economic basis are dispatched within the GRID model.<sup>2</sup>
- **Resource-specific capacity contribution values are calculated for proxy resources and QFs, based on their expected output and the final loss of load probability results in the 2019 IRP.**

---

<sup>1</sup> Starting in the 2013.Q4 Compliance filing, wind generation has been modeled hourly using actual generation shape. Potential resources were also modeled hourly when data was provided by the project developer. Since the 2016.Q4 compliance filing, all potential wind generation profiles have been shaped to an hourly profile using the hourly shape of nearby wind resources. Shaping does not alter the 12x24 wind generation profile. This change was made to make potential wind modeling more consistent with existing wind modeling. The hourly shaping of solar generation was identified as a non-routine change in the 2018.Q2 compliance filing.

<sup>2</sup> Wind dispatch was identified as a non-routine change in the 2018.Q2 compliance filing.

## Transmission

- Short-term transmission modeled based on 48 months ended June 2018.
- **Transmission investment and capacity changes consistent with 2019 IRP (2019 IRP, Vol 1, Table 8.16).**

## IRP Partial Displacements (This Filing)

Provided in the table below are the Contracts that have executed a PPA or are actively negotiating for a PPA. Signed resources are new and were not included in the 2019 IRP.

Contracts Queue

31	QF - 542 - UT - Solar	4.9	74.0	32.7%	6.6%	2023 02 01
32	QF - 543 - UT - Solar	1.4	21.0	32.8%	6.6%	2023 02 01
Total Potential MW		338.82	1783.85			
Total Partial Displacement		<b>338.82</b>	<b>1783.85</b>			
33	Utah 2019.Q3	100.00	100.00	100.0%	100.0%	2020 01 01
Partial Displacement after QF		<b>438.82</b>	<b>1883.85</b>			

After accounting for the QF queue, the capacity displacement associated with the proxy avoided cost resources in this filing were as follows:

- Thermal: Incremental Thermal QF resource displaces **FOTs for 2020-2025 and Naughton simple cycle combustion turbine in 2026.**
- Tracking Solar: **1,063** nameplate MW of solar resources are displaced by the QF queue. After degradation, the incremental solar QF displaces **25 MW of solar with storage resource located at Jim Bridger in 2024. The Company retains 100% of the RECs starting in 2024.**
- Wind: 36 MW of wind resources are displaced by the QF queue. **The incremental wind QF displaces 69 MW of UT wind resource in 2023. The Company retains 100% of the RECs starting in 2023.**

Year	Base Case Displacement (Nameplate MW)

## IRP Partial Displacements (Previous Filing)

Total partial displacement was 1,476 MW in the base case and 1,576 MW in the avoided cost case as shown in the table below, adjusted for solar degradation:

Contracts Queue						
No.	Signed Contracts	Partial Displacement	Name plate	CF	Capacity Contribution	Start Date
1	Soda Lake Geothermal PPA	13.3	20.0		66.5%	2019 09 01
