Re: Docket No. 19-035-T05—In the Matter of Rocky Mountain Power’s Proposed Tariff Revisions to Electric Service Schedule No. 114, Air Conditioner Peak Management Program (Cool Keeper Program)

Utah Clean Energy is submitting these comments in support of Rocky Mountain Power’s (“RMP”) proposed revisions to the Air Conditioner Peak Management program (“Cool Keeper”) filed on March 22, 2019. RMP’s proposed changes to Schedule 114 would allow the tariff to operate as an umbrella tariff for the Cool Keeper program and other future demand response offerings. Further, RMP proposes to increase the incentives paid to participating customers and extend the number of months and daily hours in which the program may operate. These changes are an important step in improving RMP’s demand response capabilities and in preparing the grid for higher integration levels of renewable energy resources.

Utah Clean Energy supports the proposed changes to Schedule 114 in this docket. Thank you for the opportunity to provide comments.

Sincerely,

/s/ Hunter Holman
