RE: Weather Normalization Report

In its *Report and Order*, Docket Number 99-035-10, May 24, 2000, the Utah Public Service Commission (Commission) ordered PacifiCorp to

[I]nform the Commission and the Division of Public Utilities of the anticipated date for completion of its studies concerning the weather normalization procedure and shall file with the Commission a report, with supporting material, containing recommendations for maintenance of, or modifications to, the weather normalization procedure.

Furthermore, the Commission stated that this order was not intended to “preclude the participation, as determined appropriate by PacifiCorp, of any interested party in the development of the report and the inclusion of their views and recommendations in the report.” The Division has a keen interest in this report and would like to participate in its development as much as possible and appropriate.

To date, PacifiCorp has not filed the required report. Therefore, the Division requests PacifiCorp to report to the Commission and the Division,

1. The current status of its Weather Normalization studies and report; and
2. The anticipated schedule for conducting the study and its completion date.
