

P.S.C.U. Docket No. 13-057-05

Data Request No. 2.02

Requested by Division of Public Utilities

Date of QGC Response August 12, 2013

DPU 2.02 Please provide an explanation of what portion of the current and future feeder line replacement is required to meet Federal Safety Regulations.

Answer: Questar Gas, like all other LDCs, is required to construct and operate all of its lines according to Federal Safety Regulations. The Pipeline and Hazardous Material Safety Administration (PHMSA) is in the process of establishing an Integrity Verification Process (IVP) for transmission pipelines (see DPU 2.02 Attachment.pdf). All replaced facilities that Questar has and will install will be compliant with these developing standards.

Prepared by: Brad Hasty, General Manager Engineering & Project Management, Questar Gas Company
