

P.S.C.U. Docket No. 13-057-05

Data Request No. 10.02

Requested by Division of Public Utilities

Date of QGC Response September 19, 2013

DPU 10.02 Please provide a listing for showing which Intermediate High Pressure Feederlines were placed into service along with its corresponding linear feet (or miles).

For example: In the year 1929 – 8,000' were placed in service consisting of IHP #1 (3,000'), IHP2 (3,000') and ½ of IHP #3 (2,000').

Answer: Questar Gas does not have line numbers for its IHP beltlines similar to the high-pressure feederline numbering. Attached as DPU 10.02 Attachment.xls is a listing of all of the vintage large diameter mains\* in the system.

\* Based on discussions with the Division, the Company is providing data for the IHP large diameter vintage mains, not the entire IHP system.

Prepared by: Brad Hasty, General Manager Engineering/Project Management, Questar Gas Company
