**In the Matter of the Application of
Questar Gas Company to Increase
Distribution Rates and Changes and
Make Tariff Modifications**

Docket No. 13-057-05

REBUTTAL TESTIMONY OF REED RYAN

Utah Asphalt Pavement Association (“UAPA”) hereby submits the Rebuttal Testimony
of Reed Ryan.

DATED this 12th day of December, 2013.

/s/

Douglas E. Griffith,
Attorney for UAPA

CERTIFICATE OF SERVICE

I hereby certify that a true and correct copy of the foregoing was served as indicated below this 12th day of December, 2013, on the following:

By Electronic-Mail:

Colleen Larkin Bell (colleen.bell@questar.com)
Jenniffer Nelson Clark (jenniffer.clark@questar.com)
Questar Gas Company

Gary A. Dodge (gdodge@hjdllaw.com)
Counsel for Utah Association of Energy Users and US Magnesium LLC

Kevin Higgins (khiggins@energystrat.com)
Neal Townsend (ntownsend@energystrat.com)
Energy Strategies

Damon E. Xenopoulos (dex@bbrslaw.com)
Jeremy R. Cook (jrc@pkhlawyers.com)
Attorneys for Nucor Steel, a Division of Nucor Corporation

Dale Hatch, CFO (dhatch@dunfordbakers.com)
Dunford Bakers

Karen White (Karen.White.13@us.af.mil)
Gregory Fike, Lt Col, USAF (Gregory.Fike@us.af.mil)
Christopher Thompson, Maj, USAF (Christopher.Thompson.5@us.af.mil)
Thomas Jernigan, Capt, USAF (Thomas.Jernigan@us.af.mil)
Attorneys for Federal Executive Agencies

Roger Swenson (roger.swenson@prodigy.net)
US Magnesium LLC

Larry R. Williams (larry@summitcorp.net)
Corporate Counsel for Summit Energy, LLC

Floyd J. Rigby, CEO (FloydR@ucmc-usa.com)
Travis R. Rigby, CFO (TravisR@ucmc-usa.com)
Bruce Floyd Rigby, Natural Gas Manager (Bruce@ucmc-usa.com)
Utility Cost Management Consultants

Ross Ford (ross@utahhba.com)
The Home Builders Association of the State of Utah

Douglas E. Griffith (dgriffith@keslerrust.com)
Counsel for Utah Asphalt Pavement Association

Reed Ryan (reed@utahasphalt.org)
Utah Asphalt Pavement Association

Michael McCandless (mikem@emery.utah.gov)
Emery County Economic Development

David Blackwell (daveb@emery.utah.gov)
Emery County Attorney

REBUTTAL TESTIMONY OF REED RYAN

INTRODUCTION

Q. Please state your name and business address.

A. My name is Reed Ryan. My business address is 7414 South State Street, Midvale, UT 84047.

Q. By whom are you employed and in what capacity?

A. I am employed by the Utah Asphalt Pavement Association (UAPA) as the Executive Director of the association. UAPA is a collection of private contractors, oil suppliers, engineering firms, owner-agencies, equipment suppliers and manufacturers, consultants, and maintenance companies all involved in the design, production, construction, maintenance, testing, and inspection of asphalt pavement in the state of Utah. Collectively, asphalt paved roads represent over ninety-percent of the roads in Utah and UAPA represents the majority of the industry involved in the design, construction, and maintenance of those roads. Our primary customers are cities, counties, the Utah Department of Transportation (UDOT), and private developers.

Members of UAPA are primarily IS class customers of Questar Gas Company (QGC). This rate case filing, if approved as proposed by QGC, will have a significant cost impact on our industry and ultimately on the cost of our product priced to our customers. The asphalt industry bids and wins contracts based on the future delivery of our product. These projects are generally

23 completed three months to two years in the future. In the low-bid environment in
24 which we currently conduct business, UAPA members do not have the ability to
25 pass through utility cost increases on existing contracts for future production
26 obligations. As a result, the final determinations in this case will have a direct
27 financial impact on UAPA members and, ultimately, on the customers we serve in
28 the state of Utah.

29 **Q. On whose behalf are you testifying in this proceeding?**

30 A. My testimony is being sponsored by the Utah Asphalt Pavement
31 Association (UAPA).

32 **Q. Please describe your professional experience and qualifications.**

33 A. I have been employed as the executive director of UAPA since January of
34 2012. Prior to my employment with UAPA, I worked for the Church of Jesus
35 Christ of Latter-day Saints as a public affairs specialist in Washington, DC. Prior
36 to my employment with the Church, I worked in the United States Senate as a
37 legislative aide for Senator Orrin G. Hatch. I hold the degree of Juris Doctor from
38 The George Washington University and a Bachelor of Arts degree in Political
39 Science from Brigham Young University.

40 **Q. Have you previously testified before this Commission?**

41 A. No.

42 **Q. Have you testified previously before any other state utility regulatory
43 commissions?**

44 A. No.

45

46 **Q. What is the purpose of your testimony in this case?**

47 A. To offer rebuttal testimony to the proposed tariff modifications outlined in
48 QGC's filing and the Company sponsored prefiled testimony. Specifically, we
49 wish to address:

- 50 1. Interruptible Sales Service Commodity Changes as outlined in
51 prefiled testimony of Mr. Barrie L. McKay starting at line 507.
- 52 2. New Main and Services changes as outlined in prefiled testimony
53 of Mr. Austin C. Summers starting at line 487.

54 **Q. Do you agree with the proposed tariff modifications related to Interruptible
55 Sales Service Commodity Changes in QGC's filing?**

56 A. No. Not only has QGC proposed a significant DNG revenue increase,
57 which we recognize is fully within their right to do as part of this and future rate
58 cases, but QGC has also proposed significant changes to the commodity rate for
59 the IS Class of customers. Coupled together, these modifications will result in a
60 substantial increase to the total delivered cost of gas to the IS Rate Class.

61 While it is not perfect match for our industry, asphalt production facilities
62 and oil terminals currently qualify for and receive service under the IS rate
63 schedule. As an industry, we have a unique profile within QGC's system because
64 we predominately use natural gas during off-peak summer periods for the
65 production of asphalt. Although the current IS rate schedule does not fully
66 recognize the cost responsibility related to our unique off-peak usage pattern, it is
67 the only schedule available to access a seasonal market-based rate. This is

68 important as the schedule, under current rate methodologies, comes as close as
69 possible to providing competitive rates for us to retain and maintain our load on
70 the QGC system – a benefit for both QGC and our industry.

71 Regarding the proposed changes, QGC’s stated impact per customer is
72 between a two-to-three percent (2%-3%) increase in annual natural gas costs.¹
73 What we have found, however, by asking our members and by conducting
74 internal research, is that this proposed DNG increase and change in methodology
75 from the monthly market index price to the Weighted Average Cost of Gas
76 (WACOG) will affect some IS rate customers by an increase of twenty-five to
77 thirty percent (25%-30%) in annual natural gas costs. This represents, in one
78 instance, an increase of over \$400,000 to a single member of UAPA on an annual
79 basis and well over that figure for costs to our industry as a whole. This
80 momentous and concentrated increase is due primarily to QGC’s proposal to
81 move away from the methodology it has used to calculate the cost of gas for IS
82 customers for the past ten years.

83 QGC’s stated reason for this change in prefiled testimony is to “avoid
84 inadvertently creating an inter-class subsidy.”² On the surface, it is difficult to
85 argue with this objective. As an industry we readily recognize that because of our
86 unique predominately summer-weighted load profile, we have been able to access
87 natural gas over the last couple of years at lower prices based on the monthly
88 market index price. Principles of fairness, however, dictate a need to look at the

¹ See *Questar Gas Asks for a General Rate Increase*, Press Release, July 1, 2013

² See, QGC Exhibit 1.0, Direct Testimony of Barrie L. McKay, Line 504.

89 entire history of this current tariff and its methodology. In doing so we find for
90 many years prior, IS customers were paying higher market prices when the
91 company cost of gas was, indeed, less expensive. As an industry, we were willing
92 to pay the higher market rates at that time because we realized the stability IS rate
93 designation offered. At the same time QGC enjoyed the readily recognizable
94 benefit that the IS class provided as a revenue stream in the summer months while
95 being fully interruptible when the demand for natural gas is much higher.

96 Therefore, it becomes more difficult for QGC to argue in favor of
97 eliminating an alleged cross-subsidy now, when in the past the reverse has also
98 been true. For several years IS customers were providing subsidies to other
99 classes by purchasing natural gas at market prices above the cost-of-service gas
100 being provided by QGC to the IS class. This begs us to ask why no such effort
101 was made then to make a change? Knowing the market and economics will again
102 fluctuate in the future, it does not seem reasonable to interject politics and
103 policies, without prior consultation or planning with the customers that it affects
104 most. In reality, such policies do not truly reflect access and opportunity on the
105 market at fair prices for customers that benefit the system in off-peak months.

106 Should the current methodology undergo significant change as proposed,
107 our industry will continue to use gas service only if the total delivered cost of gas
108 is BTU-competitive with alternative fuels. Historically, this has not always been
109 the case, and we will bypass QGC rate services if they are not designed to
110 produce a market rate that is reasonably cost competitive.

111 Alternatively, principles of fairness and gradualism offer us an avenue to
112 explore these options in greater detail to mitigate a potential twenty-five to thirty
113 percent (25%-30%) increase in the cost of natural gas for our industry. When, as
114 an association, we asked ourselves if we should even get involved in this rate
115 case, we examined the potential costs and realized that most of what QGC is
116 asking for here in the changes to the IS class will ultimately, and in time, be
117 passed on to our customers (cities, counties, UDOT, and others) simply because
118 we cannot afford to absorb such a change and stay in business.

119 In Utah, where we already have an identifiable \$11.3 billion gap in needed
120 infrastructure investment,³ such proposed increases to asphalt production costs
121 only add strain to city, county, and state budgets that are buckling under the
122 pressures of today's economy. We are happy to pay for our use of gas to QGC
123 and to share in this burden with other classes of customers as appropriate, but to
124 propose moving the IS class to WACOG which will result in a potential twenty-
125 five to thirty percent (25%-30%) increase for IS customers, is in our perspective,
126 unreasonable and contrary to the long-standing principal of gradualism.

127 We are grateful that QGC, through settlement agreement negotiations, has
128 worked with UAPA and others on the DNG portion of the agreement. QGC has
129 agreed to an interim study, the purpose of which is to examine the equity of
130 splitting IS and TS rate classes to more readily recognize the unique profile of our
131 industry and others. We sincerely appreciate QGC's efforts in these negotiations,
132 but the real heart of the issue for our industry continues to center on the change of

³ See *Utah's Unified Transportation Plan*, Page 32.

133 the methodology from the monthly market index price to the WACOG. We have
134 essentially agreed to the pennies and dimes while the ten and twenty-dollar bills
135 remain on the table, much to the continued consternation of our industry and our
136 customers.

137 We believe it is reasonable for the Commission to thoroughly investigate
138 the merits of QGC's proposed commodity changes to the IS Rate Class.
139 However, we do not believe this rate case provides the mechanism to fully
140 investigate the potential consequences of these modifications. Consequently, we
141 recommend the Commission stay the change to the modification of the
142 commodity cost of gas methodology for IS customers to allow the agreed-upon
143 interim task force, with the needed input from our industry and others which were
144 not present prior to the filing of this rate case, to study and develop rate classes
145 that more truly reflect predominantly summer-weighted usage patterns, as well as
146 the toll on, and benefit to, the QGC system and the services they provide. The
147 results of this study should be presented in the next QGC rate case.

148 **Q. Do you agree with the proposed tariff modifications related to New Main and**
149 **Services?**

150 A. We are uncertain how these proposed modifications might affect our rights
151 for allowance refunds under existing contracts. UAPA members have made
152 significant capital investments, under the current QGC line extension policies, for
153 pipeline extension projects to production facilities. Some UAPA members have

154 entered into five-year line extension contracts for these projects and have several
155 years remaining on the contract refund allowance obligations.

156 To alleviate concerns with the uncertainties of how this change affects the
157 current five-year agreements, coupled with the previously mentioned IS
158 commodity modification, we recommend that projects currently under five-year
159 agreements qualify to be grandfathered under any new policy. In such a case, we
160 are willing to give up our existing contractual refund allowance rights conditioned
161 upon a refund of QGC internal costs charged for any applicable projects. We
162 recommend the Commission establish a grandfather period for any project that
163 has a currently effective contract in place and order refunds of QGC internal costs
164 charged to these projects. This would potentially simplify and streamline the
165 policy, reduce QGC costs associated with tracking and refunding allowances, and
166 assure compliance with keeping the long-standing policy of sharing incremental
167 costs 50-50. Under such conditions, we believe the requested QGC modifications
168 to its existing policy would be fair and reasonable.

169 **Q. Please summarize your primary conclusions and recommendations**
170 **concerning Questar's proposed rate adjustment.**

171 A. A drastic change in commodity cost methodology, in addition to a DNG
172 revenue increase and a change in investment policies for infrastructure, not only
173 places a disproportionate burden on our industry and others, it also causes long-
174 term negative impacts to our neighborhoods, our communities, and our state
175 where a burgeoning population demands greater investment in safe and reliable

176 infrastructure. Any potential increase here, does not go unfelt elsewhere.

177 Under the guiding principles of fairness and gradualism, we respectfully
178 request the Commission give IS class customers, like UAPA, and QGC time to
179 prepare for and make such changes the right way. Not once, prior to this filing,
180 was our industry or IS class customers consulted on how QGC's proposed
181 changes would affect the way IS class customers do business and plan for the
182 future. We know we must pay our share of the costs we cause the system to incur
183 on our behalf. However, a DNG revenue increase, a change to commodity cost
184 methodology, and an overhaul to investment policies in infrastructure, when
185 examined as a whole, represent significant and unfair changes to our industry
186 when there was no prior notification, consultation, or opportunity to prepare and
187 account for such change. Therefore, we request the Commission stay the change
188 in methodology, allow the previously agreed-upon task group to examine and vet
189 such changes with the goal to present rate classes which more readily reflect
190 unique industry profiles and their benefits to the system, and to stipulate with
191 QGC as to the aforementioned conditions regarding the New Main and Services
192 policy as proposed by UAPA.

193 **Q. Does this conclude your rebuttal testimony?**

194 **A.** Yes, it does.
