

BEFORE THE PUBLIC SERVICE COMMISSION OF UTAH

IN THE MATTER OF THE APPLICATION)	
OF QUESTAR GAS COMPANY FOR)	
APPROVAL OF THE CANYON CREEK)	DOCKET NO. 15-057-10
ACQUISITION AS A WEXPRO II)	
PROPERTY)	

REDACTED

DIRECT TESTIMONY

OF

GAVIN MANGELSON

FOR THE OFFICE OF CONSUMER SERVICES

OCTOBER 8, 2015

DIRECT TESTIMONY OF GAVIN MANGELSON

1

INTRODUCTION**2 Q. PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS ADDRESS.**

3 A. My name is Gavin Mangelson; I am a Utility Analyst for the Office of Consumer
4 Services (Office). My business address is 160 East 300 South, Salt Lake City, Utah
5 84111.

6 Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

7 A. I received a B.A. in Economics from the University of Utah. I previously worked as
8 a Financial Analyst for the Department of Technology Services; where my duties
9 involved the creation of rates that were subject to approval by a government
10 appointed commission. I have completed a Utility Analyst training course from New
11 Mexico State University. In my capacity with the Office I have submitted comments
12 in over thirty dockets and testimony in dockets 14-057-19, 14-057-31 and have
13 analyzed issues relating to cost-of-service, rate design, and gas supply.

14 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

15 A. The purpose of my testimony is to provide the response of the Office regarding the
16 proposed inclusion of a newly acquired portion of the Canyon Creek property into the
17 Wexpro II agreement and the other provisions contained in Questar Gas Company's
18 (Questar or the Company) proposal. As part of this response, I will indicate what
19 aspects of the Wexpro agreements have been advantageous to customers. I will also
20 identify which portions of the Company's proposal the Office supports and which
21 portions cause us concern.

22

REDACTED

23 **CANYON CREEK ACQUISITION AND PROPOSED PROVISIONS**

24 **Q. WHAT IS BEING PROPOSED IN THIS DOCKET?**

25 A. The primary proposal in this docket is to allow recently acquired portions of the
26 Canyon Creek property to be included in the Wexpro II agreement. The application
27 also proposes three additional provisions.

- 28 1. New wells from post 2015 development drilling would receive the
29 Commission allowed rate of return established as part of the Wexpro II
30 agreement, rather than the higher rate of return currently received for
31 developmental wells. This lower rate of return would apply both to the new
32 portions of Canyon Creek, and to any new wells developed on properties
33 already included in the Wexpro agreements.
- 34 2. The costs associated with non-economic wells (dry holes, non-commercial)
35 would be shared equally (i.e. 50/50) between Wexpro and ratepayers.
- 36 3. When the total cost of service price (including wells at both levels of return) is
37 less than the market price of natural gas, the savings between the cost of
38 Wexpro gas and what market gas would have cost would be shared equally
39 (i.e. 50/50) between Wexpro and ratepayers.

40 **Q. ACCORDING TO YOUR UNDERSTANDING, WHY HAVE THESE**
41 **ADDITIONAL PROVISIONS BEEN PROPOSED?**

42 A. The current agreements require that developmental drilling be anticipated to produce
43 gas at or below the NYMEX Rockies-adjusted 5-year forward price curve. According
44 to the testimony of Brady B. Rasmussen Wexpro cannot continue a drilling program
45 under current market conditions (Rasmussen Direct Lines 89-94), due to the current

REDACTED

46 low market prices. Reducing the rate of return on developmental drilling may reduce
47 Wexpro’s overall costs to potentially allow Wexpro to drill new wells that can meet
48 the requirements relating to the 5-year forward curve. In summary, the reduced rate
49 of return is being proposed to facilitate a feasible drilling program under the current
50 conditions of low prices in the natural gas market.

51 The shift in who bears responsibility for dry hole costs is designed to create a
52 lower level of risk for Wexpro in exchange for accepting a lower level of return (see
53 generally, McKay Direct Lines 140-143).

54 Finally, the provisions for potential future sharing of “savings” is designed to
55 create incentives for Wexpro to further lower its costs over time (McKay Direct lines
56 162-163).

57 **WEXPRO AGREEMENTS**

58 **Q. PLEASE DESCRIBE WHAT AGREEMENTS CURRENTLY GOVERN THE**
59 **PRODUCTION AND SALE OF COST-OF-SERVICE GAS PRODUCED BY**
60 **WEXPRO FOR QUESTAR RATEPAYERS.**

61 A. Wexpro Company (Wexpro) is a subsidiary of Questar Corporation that develops and
62 produces natural gas for Questar Gas Company’s ratepayers at a “cost of service”
63 price, rather than a market price. The initial governing agreements are The Wexpro
64 Stipulation and Agreement, executed on October 14, 1981 (Wexpro I.) In 2012,
65 Questar submitted its Wexpro II Agreement between Wexpro, Questar Gas Company,
66 the Utah Division of Public Utilities (Division) and the Wyoming Office of Consumer
67 Advocate. This agreement expanded the properties that could be governed by the
68 same general terms that are included in the Wexpro I agreement. Wexpro II was

69 approved by the Public Service Commission of Utah (Commission) in docket no. 12-
70 057-13 in an order dated March 28, 2013. In addition, guideline letters are developed
71 as necessary to clarify specific aspects of Wexpro operations.

72 Finally, in docket 13-057-13, Questar, the Division and the Office submitted a
73 settlement stipulation (Trail II Stipulation) agreeing to the inclusion of the first
74 property, the Trail Unit Acquisition, under the Wexpro II agreement. The Trail II
75 stipulation contained additional commitments related to the overall operations of
76 Wexpro and provision of cost-of-service gas.

77 **Q. HOW HAS THE COST-OF-SERVICE GAS AFFECTED RATEPAYERS?**

78 A. Utah ratepayers have generally benefited by having the reliable source of natural gas
79 provided in the Wexpro Agreements. Historically the cost of service gas has been on
80 average below the market price of natural gas, and therefore Utah rate payers have
81 saved money on the cost of their natural gas. However, recent years have seen low
82 market prices for natural gas resulting in ratepayers purchasing cost of service gas at
83 prices higher than those available on the market.

84 **Q. HAVE THE TERMS OF THE TRAIL II STIPULATION BEEN SHOWN TO
85 BE ADVANTAGEOUS TO RATEPAYERS?**

86 A. Yes. The Trail II stipulation within the Wexpro II agreement specifies that new wells
87 may be drilled only when the price of gas produced from those wells will be less than
88 or equal to the prices reflected in the published NYMEX Rockies-adjusted 5-year
89 forward curve for natural gas prices. This provision protects ratepayers by restricting
90 new production of cost of service gas that would likely be above market prices.

91 Under the Trail II stipulation, Wexpro also agrees to manage the supply of cost of

92 service gas so that it does not exceed 65% of total gas supply. This provision
93 alleviated concerns raised by the Office and others that total cost-of-service gas was
94 reaching a level that could not be cost effectively managed. An additional benefit
95 was that it lowered the total amount of cost-of-service gas that currently has a cost
96 above current market prices.

97 **OFFICE’S RESPONSE TO CURRENT PROPOSAL**

98 **Q. WHAT IS THE OFFICE’S ASSESSMENT OF THE NEW PROPERTY**
99 **PROPOSED FOR INCLUSION UNDER THE WEXPRO II AGREEMENT?**

100 **A.** The application explains that Wexpro had previously held a 70% interest in the
101 Canyon Creek property and has now purchased the remaining 30% interest. This
102 acquisition includes 100 existing wells with locations planned for 30 additional
103 development wells. Analysis of confidential exhibits L and L-1 demonstrate that the
104 gas produced from existing wells on the property cost less than the current average
105 cost of service gas; however, these existing wells produce gas at costs that are above
106 current market prices. Therefore, inclusion of this property in to the Wexpro II
107 agreement will result in additional wells that produce cost of service gas at costs
108 above current market prices. These exhibits also provide forecasted prices for gas
109 from new wells within the property, under the proposed reduced rate of return these
110 development wells are anticipated to provide gas at costs that are near or below
111 market prices.

112 **Q. THE OFFICE HAS RAISED CONCERNS IN THE PAST ABOUT THE**
113 **TOTAL LEVEL OF COST OF SERVICE GAS. HOW DOES THE CURRENT**

114 **REQUEST TO INCLUDE A NEW PROPERTY AFFECT THE OFFICE'S**
115 **CONCERNS?**

116 **A.** Wexpro is currently forecasting an ongoing reduction to percentage of gas supply
117 from cost of service gas. Confidential Exhibits M and M-1 demonstrate that this new
118 property will not substantially change the percentage of gas supply from cost of
119 service gas, ****BEGIN CONFIDENTIAL**** [REDACTED] ****END**
120 **CONFIDENTIAL**** Exhibit M-1 further demonstrates that these levels decrease
121 (by a lesser amount) even with the adoption of the additional provisions proposed in
122 this filing that are designed to allow for an increase in production, ****BEGIN**
123 **CONFIDENTIAL**** [REDACTED] ****END CONFIDENTIAL**** Due to
124 these forecasts the Office is comfortable that the inclusion of this property will not
125 result in an increase of cost of service gas to its former elevated levels. The
126 anticipated low cost of gas from development wells under the new provisions also
127 serves to alleviate some of the concerns relating to cost of service gas. If
128 circumstances change, the agreement not to exceed 65% remains in place and will
129 serve as a protection to ratepayers.

130 **Q. IN WHAT WAYS CAN THE OTHER PROPOSAL TERMS POTENTIALLY**
131 **BENEFIT UTAH RATEPAYERS?**

132 **A.** The primary potential benefit of the proposed provisions is to reduce the average
133 price of cost of service gas. This reduction can result initially from the lower rate of
134 return. Additionally, the provision to share savings when average cost of service gas
135 is below the market price will provide an incentive for Wexpro to look for additional
136 ways to lower costs.

137 Mr. Rasmussen also asserts additional benefits of a drilling program on lines
138 95-110 of his Direct Testimony, such as reliable supply through more consistent
139 production over time.

140 **Q. DOES THE OFFICE AGREE WITH WEXPRO'S ASSESSMENT OF THE**
141 **BENEFITS OF A DRILLING PROGRAM?**

142 **A.** Not entirely. It is likely that Wexpro values having a drilling program more highly
143 than does the Office. However, the Office doesn't oppose a proposal that allows a
144 drilling program to resume as long as the terms and conditions provide net benefits to
145 ratepayers in comparison to market alternatives.

146 **Q. IS THE OFFICE SATISFIED WITH THIS CURRENT PROPOSAL?**

147 **A.** No. The Office is concerned that this application and supporting testimony may not
148 provide adequate controls to certain portions of the agreement. The Office's concerns
149 include the following:

- 150 • The proposal for ratepayers to pay 50% of the costs of future dry holes and
151 non-economic wells.
- 152 • The lack of specificity regarding how the market price will be defined for
153 determination of drilling and for determination of potential shared savings.
- 154 • Some of the details regarding the proposal for shared savings.

155 **Q. WHAT IS THE OFFICE'S RESPONSE TO THE COMPANY'S PROPOSAL**
156 **TO HAVE RATEPAYERS PAY 50% OF THE COSTS OF FUTURE DRY**
157 **HOLE AND NON ECONOMIC WELLS?**

158 These new expenses for ratepayers introduce a liability that may be difficult to predict
159 or anticipate. The Office does not question Wexpro's shared incentive to keep these

160 costs low. However, we recognize that some years may see a more aggressive
161 drilling program while others a more conservative one. Therefore, this provision
162 introduces a certain amount of potential volatility into the expenses covered by
163 ratepayers. The Office is not convinced that equally sharing these expenses provides
164 an adequate incentive to appropriately manage them. An annual cap on dry hole
165 expenses would be an acceptable means to mitigate the potential volatility.

166 **Q. PLEASE EXPLAIN THE OFFICE’S CONCERNS ABOUT THE DEFINITION**
167 **OF MARKET PRICES.**

168 A. The Office notes that the application and supporting testimony do not currently
169 establish a specific method for determining the “current market price” that will be the
170 benchmark for determining future shared savings. Before taking a final position on
171 the proposals in this docket, the Office would need to evaluate a specific method of
172 calculation. Specifying this calculation is essential in order to ensure that this
173 determination of current market price is fair and consistent.

174 A related concern is that the Trail II Stipulation never precisely defined the
175 calculation of the five-year forward price curve, which is a key element defining
176 future drilling. Before the Office supports any expansion of the Wexpro II
177 agreement, we assert that this term also needs to be more specifically defined.

178 **Q. WHAT ADDITIONAL CONCERNS DOES THE OFFICE HAVE**
179 **REGARDING THE PROPOSED SHARING OF SAVINGS?**

180 In the testimony of Barrie L. McKay he proposes that savings will be shared 50/50
181 when the average price of cost of service gas is less than the market price (McKay
182 Direct lines 88-90). Such “savings” are not anticipated for the near future.

183 First, the Office notes that the use of the term “savings” is a bit of a misnomer.
184 In practice this “sharing” would result in ratepayers paying for cost of service gas,
185 and then paying an additional sum commensurate with 50% of the difference in
186 market price.

187 Second, the Office notes that if the market price of gas were to become
188 extremely high, then this sharing provision could result in Wexpro earning returns in
189 excess of previous limits set by Wexpro’s governing documents. The Office’s view
190 is that this agreement should not result in a windfall for Wexpro, no matter how
191 unlikely or how far into the future it might occur. Therefore, the Office asserts that
192 this proposed provision must also be refined by providing that shared savings be
193 capped at amounts commensurate with the previous returns for development wells.

194 Finally, the Office has concerns regarding some of the details of the
195 calculations. If any proven developed and producing wells (PDP) are later acquired
196 and included in The Wexpro II Agreement under these new provisions, then the
197 volumes from those wells should not be allowed in the calculation of shared savings.
198 All PDP wells should be limited to the Commission allowed rate of return regardless
199 of when they are acquired. This is consistent with the longstanding rate of return
200 applied to PDP wells and should not be modified by the current proposal.

201 **Q. DOES THE OFFICE SUPPORT THIS PROPOSAL WITHOUT THESE**
202 **CONCERNS BEING FURTHER ADDRESSED?**

203 A. No.

204 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

205 A. Yes.
