

RESIDENTIAL BILL HISTORY KEY

Enbridge Gas Utah Rate Changes 1992-Present and Associated Billing Impacts to Average Residential Customer Using Various Dths/Year

This key is intended to assist in the review of the historical rate changes for DEU’s distributed natural gas among its residential customers taking service under the GS rate schedule.

DEU’s base distribution non-gas rates for Utah residential customers are set by the PSC during general rate cases, and are the result of either a fully litigated or a settled case. In between general rate cases, the PSC may also approve various other rate adjustments.

This rate history is a “cumulative snapshot” of changes approved by the PSC to DEU’s rates on the GS rate schedule and incremental adjustments subsequently approved, and reflects the estimated impacts of those approvals to the bill of an average residential customer. Over the years the amount of natural gas used by an average customer has fluctuated due to changing home sizes and energy efficiency campaigns. Included are usage rates at 115Dths/year, 82 Dths/year, 80 Dths/year, and 70 Dths/year. DEU currently uses 70 Dths/year as an average residential customer. DEU’s PCS-approved tariff changes are presented in discrete chronological order once the PSC approves them. Below is a guide to the detailed information provided in the rate change history updates.

<u>Item</u>	<u>Location</u>	<u>Description</u>
Effective Date	Column A	Date an approved rate change takes effect.
Docket No.	Column B	PSC’s docket catalogue number.
\$ Change Requested	Column C	DEU’s requested recovery amount (\$) related to a rate adjustment.
\$ Change Approved	Column D	Amount (\$) of DEU’s requested recovery related to a rate adjustment approved by the PSC. <u>Note</u> : Some final approvals may not be fully reflected in rates at the time the PSC approves them. For example, some rates are approved on an interim basis until the Division of Public Utilities completes a final audit of the related accounts, recommends final rates to the PSC and the PSC approves said final rates.
Customer Usage Dth/year	Column E	The average residential customer usage level that corresponds to Column F. <u>Note</u> : This number has fluctuated over the years but has been at 82 Dths/year since August 2010.
Residential Annual Bill	Column F	The amount an average residential customer using the amount in Column E can expect to pay over a year.
% Change Residential Annual Bill	Column G	The amount an annual bill for an average residential customer is changing, on a percentage basis, compared to existing rates due to the approved rate change.
70 Dths/year Residential Annual Bill	Column H	The amount an average residential customer using 70 Dths/year can expect to pay over a year.
80 Dths/year Residential Annual Bill	Column I	The amount an average residential customer using 80 Dths/year can expect to pay over a year.
115 Dths/year Residential Annual Bill	Column J	The amount an average residential customer using 115 Dths/year can expect to pay over a year.
Reason	Column K	The source of an approved rate change. DEU’s total rate is made up of many individual components and DEU typically requests a change of those rates in separate dockets. See page 2-2 of DEU’s tariff, which can be found on the PSC’s website, for a breakdown of the total rate for the GS rate schedule.
